DEDICATED TO THE PRESERVATION OF AMERICAN INDEPENDENCE

FREE TRIAL ISSUE!

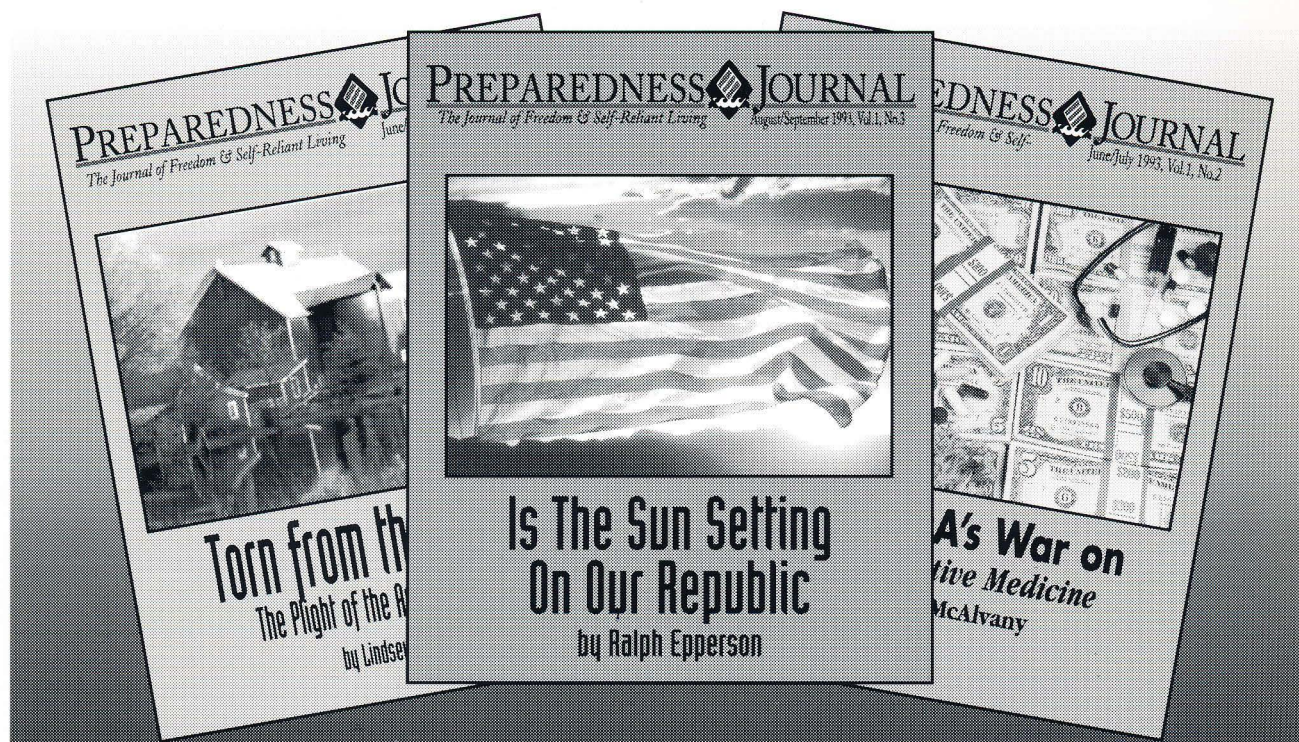

PREPAREDNESS JOURNAL

The Journal of Freedom & Self-Reliant Living

Now you can keep up to date with all the critical issues concerning your future, while learning from the experts the practical "How To" skills of self-reliant living.

Each issue of the Preparedness Journal will

cover a wide variety of topics; everything from Food Storage to Constitutional Issues, Health & Nutrition to Alternative Energy. In today's rapidly changing world practical preparedness should become a way of life not an after thought.

Limited Offer!

Receive a free trial issue of the Preparedness Journal at no obligation. We are confident that you will enjoy the many excellent articles, reviews and resource information. After reviewing your free issue, you decide to continue, simply mail in a payment of \$19.⁹⁵ for a one year subscription. We will promptly send you the next issue. If you decide not to continue, simply return your invoice marked cancel, and keep your free trial issue.

YES! Please send me my FREE trial issue. If I like what I see, I can continue to receive 6 more issues for only \$19.95

Exotic Research Report

Dedicated to the Preservation of American Independence

Volume 2 • Issue 3

July/August/September 1998

- From the Publisher's Desk** - A report on the recent conference! 2
- Energy Independence... Reality vs Fantasy** - We have the most reliable energy systems in the world... however, it's very centralization makes it vulnerable to the Y2K problem. At Exotic Research we are taking the first steps to reduce energy consumption and then pull off the grid. 3
- Speaker Contact List** - After watching the videos, many readers want to contact our conference speakers. Here's their addresses and phone numbers. . 8
- A Fully Functional Turbine Test Stand** - John Pickard has built a working steam Tesla turbine. To thoroughly test it, he built a test stand that provides steam and a load. 11
- GEET... Advanced Technology... Available TODAY!** - GEET releases their new mini-GEET Model C for testing, and begin testing the Neltron Turbo-Battery introduced in the last issue. New products are also described. 19
- "Dumanis Kyklos"... The Power Wheel** - Calvin Bahlmann has successfully analyzed the Methernitha Testatika Engine. From that information and advanced capacitor technology, he developed the Power Wheel ! 25
- The Spring Atom... A New Atomic Theory Illustrated by Magnets** - Larry Spring has been conducting hands-on original experiments in electromagnetics for fifty years. He developed a new magnetic atomic theory based on practical experiments and observations. 28
- Table the Old Square & Roll in the New Sphere... The Basis for the Quantum Disk FVY** - Mendeleev created the Table of Elements over a hundred years ago. Since then, chemistry researchers have made adequate use of his concepts, even though the table has a gap in it. Brian Andersen has converted the square table into a sphere leading the way to a quantum leap in the understanding of chemical interactions! 33
- The Electro-Acuscope/Mycopulse... Highly praised by athletes!** - Electro-medicine is finally taking a firm hold with the introduction of this FDA approved machine whose use was pioneered by professional athletes since its advent in 1978! 47
- Tribulus Terrestris L... Secret Soviet Performance Enhancer** - Better than VIAGRA... this supplement which is derived by the much accursed "puncture weed" has many health benefits and builds stamina! 51
- STEVIA... A Safe, Natural Alternative to NutraSweet** - Imagine a herb that's 150x sweeter than sugar with NO calories. It's real... FDA approved as a supplement... yet vigorously attacked by the FDA as a food additive. Is money and Monsanto's profits the only criteria for FDA approval? 55
- Wagging the Dog! The al-Shifa Pharmaceutical Factory Raid** - The seeds for WWII were planted by this unilateral, unprovoked US military assault on Sudan. Was this "mistake" the dawn of a new US foreign policy? .. 61

Don't make us the 'Best Kept Secret' in the alternative fields! If you like our stuff... then let others know about us!

From the Publisher's Desk...

If you would like to ask the Editor a question, mail it to:

Exotic Research, PO Box 411, Stanfield, AZ 85272

We will do our best to get you a reasonable answer and publish it here!

A Smashing Success...

The measure of success for any conference should be the smiles on the faces of its attendees.... and at the 1998 *Exotic Research Conference*, it was unanimous! With about 20 outstanding speakers and a dozen vendors, the first conference ever held under the Exotic Research banner was a smashing success.

It was a very high spirited conference with four days of intense activity. During the day, there were lectures and workshops to attend. Additionally, we had a vendors room where one could check out new products and books throughout the day. Outside, Paul had his GEET-equipped Suburban and other equipment on display. For those purchasing the mini-GEET, Paul's Colorado distributor — Tom Berry — was on site to install them.

In the evening, there was a general audience presentation followed by a wine and cheese. At other conferences, everyone scatters after the last speaker... it is no accident that at an *Exotic Research Conference*, everyone stays around for hours. The wine and cheese socials provides the impetus and opportunity for everyone to know everyone else. It was a lot fun.

For the late-nighters, we moved the refreshments to the Penthouse and the discussions continued to the wee hours of the morning. With the wine, music and lively conversation everyone had a GREAT time.

The conference culminated in the wedding between Paul Pantone and Molley Fienchko. I was honored to walk Molley up the aisle to her beloved fiancée. Afterwards, we held the reception in the Penthouse... another late night event.

The biggest complaint we encountered... no one really wanted to go home! In fact, I couldn't even get out of there until Wednesday afternoon myself.

Spectacular Speakers

There were about twenty speakers, all of them were highly qualified experts in their fields of study. Although there were two no-shows, our alternative speakers gave the same hard-hitting performances as the scheduled speakers. We had a good mix of experienced popular speakers, some who were relatively unknown, and some who were speaking for the first time.

As can be expected, Paul Pantone was a definite hit. In addition to his lecture and workshop on his GEET technology, Paul was onhand constantly to answer questions

and give attendees additional demonstrations of his products. He had plenty of hardware on hand.

Dr. Nelson Camus arrived in his modified 1997 Lincoln Continental which he drove from Los Angeles to Phoenix on approximately 5 gallons of gas!... *that's about 80 miles per gallon!* He has developed the Neltron Turbo-Super Charger battery described in the *Exotic Research Report*, V2N2, April/May/June 1998 issue. Dr. Camus demonstrated his internationally renowned "cold fusion" generator and introduced his room temp superconductor technology!

Bruce Perreault was another outstanding speaker. Over the past year, he has been working with Calvin Bahlmann on *radiant energy*. Between the two of them they had lots of equipment to demonstrate.... and are already making preparations for next year's conference.

Alas, I am out of space, but rest assured that the other speakers were just as great. A list of speakers and contact numbers is on page 8. For those of you who were unable to attend the conference, we videotaped the conference presentations. Although that makes the presentations available, it is a poor substitute to actually being there and physically examining the devices yourself.

The Staff

As in any conference, the supporting staff is just as important as the speakers. The headquarters staff that we put together will most likely be with us for many years to come. They are:

- Master of Ceremonies - Tyler Pauley
- Registration Co-Ordinator - Kia Oro
- Audio/Visual Producer - Larry Gionevelli
- Organizer's Assistant - Dwayne Gray

A critical portion of the conference was the prepublicity. Thanks to the efforts of Jim Dilettoso and Paul Pantone, we were able to get on a couple of radio shows at the last second. Ted Curtis, Cheryl Hager, and Les Witting spent many hours and much gas posting flyers and running errands around the town.

Next Year...

We will be having another conference next year. With this magazine the first opportunity to pre-register will be sent out. I encourage anyone coming to take advantage of the initial discounts... the money you save can help cover your hotel costs... making it an affordable opportunity you won't want to miss!

Steve Elswick, BSSE
ps. I can be reached at (520) 424-3581.

ENERGY INDEPENDENCE

Reality vs Fantasy!!!

Steven R. Elswick, Publisher—*Exotic Research Report*

Wildcatters...

Although big oil dominated the oil industry, it was built by 'catters... fiercely independent men who risked everything they had on a dream. Although money was an important part of their life, it was not the real reason these men put everything on the line on a gamble. They simply loved rising to the challenge and overcoming the odds.

Meeting life's challenges builds character. How we *deal* with these challenges determines our character. It was those "hardened" people who speak the truth regardless of others opinions, that built the "American Dream" that we enjoy.

An American Dream

Easy access to power is the lifeblood of the United States in the 20th century. The rapid development of transportable electrical power (marked by Tesla's achievement in harnessing Niagara Falls) set off an unprecedented surge of prosperity. Energy intensive industries such as Aluminum Company of America (ALCOA) were able to be started only because of the availability of cheap electrical power in massive quantities.

The development of household appliances spurred the demand for electrical energy in the homes. Today's modern lifestyle requires that energy be provided to heat and cool the homes, refrigerate food, lighting, as well as a variety of household and maintenance tasks.

Finally, electricity has fueled the communications industry by allowing the development and spread of

radio and television. Later, the home computers made their debut and in some cases are now considered necessities.

The Reliable Grid

In response to the growing demand for energy, the electric utilities have developed a reliable, efficient system of delivering power to an enormous area. Furthermore, over the years utilities have built a huge electrical grid virtually covering the United States. Now, energy from one part of the country can be wheeled into another part of the country easily and efficiently.

Aesthetically, the grid is ugly with its poles in the air and wire strung out all over the place. It can be dangerous to the unwary during a storm as wires are blown down. Finally, when it is disrupted, huge--even multistate regions -- can be blacked out.

(Note: Colorado

Springs is recognized as having the most reliable electric systems in the US. ALL new developments there have underground systems which avoid most of the major problems.)

Some industries require that power be supplied even in the event of a blackout (ie. hospitals). Many of those companies have backup systems consisting of batteries, fuel cells, and onsite generators. These systems are generally designed to operate for fairly short periods until power from the grid is restored. In the event of an extended power outage lasting days, weeks, or months, it is unlikely that many of them

would be sustainable during the entire period.

With such a reliable power source, one would wonder why anyone would want to be off the grid. Much of the desire comes from a high utility bill every month. In the rural areas, utilities charge extra to extend their power lines to the more remote, less populated areas. Finally, our American tradition has fostered a keen sense of self-reliance and independence. Being dependent on the grid for one's energy requirements puts one at the mercy of the power companies.

Y2K Problem

With the year 2000 rapidly approaching, the reliability of the power companies electric grid will be called into question. Recently, an inherent design flaw in early microcircuits has been exposed. Known as the Y2K problem, this flaw will manifest itself in the year 2000 when many microchips will cease to function due to the inability to rollover from "99" to "00". Although some have expressed concern for the havoc it will wreak in the financial

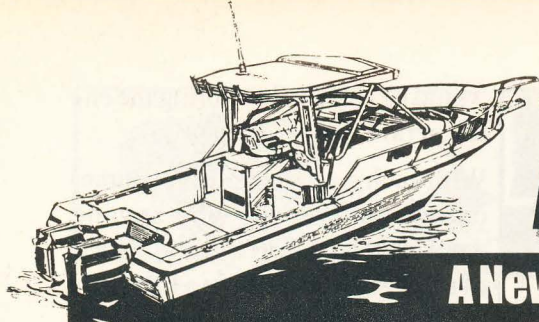

world, the real danger is with the utilities.

A hard beginning maketh a good ending.. JOHN HEYWOOD CIRCA 1565--

Whereas the

banking world have been able to solve their problems through rewriting computer code (software) and upgrading their systems, the utilities have a much more substantial physical problem.

Consolidated Edison utilizes computer control circuits for their switching substations. The controllers have faulty programming (a "bug") burned into some of the microcircuits that will not let them operate after 1999. Because the bug is in firmware (not reprogrammable software). In order to fix the problem, all the controllers need to have new microchips installed. This is not

Therma-Marine Coating

**A New Fluid Applied Ceramic Covering...
that applies like paint and protects your investment!!!**

- **Protects every functional part of a boat.**

Therma-Marine has taken ceramics and placed them in a liquid form creating an insulating paint that will virtually last as long as the substance to which it is applied. It can be used to paint bilges, walls, roofs, cabins' engine rooms, etc. The whole boat becomes insulated as well as being fully coated with a certified fire retardant.

- **Increases comfort levels of a boat.**

Therma-Marine has soundproofing qualities which may reduce noise levels up to 23% and can even be used to paint exhaust systems, pipes, manifolds, water pipes, etc. which will help to reduce the heat from those areas and make the engine room far cooler. The paint is mildew resistant, it will not trap moisture, has a long range mildewcide and will not contribute to mildew growth.

- **A top antifouling paint.**

The main concern with bottom painting is the capacity to deter flora and fauna from attaching themselves. To deter this activity most paints use an impregnated biocide, usually copper, zinc oxide, pepper, etc. Service life depends on many factors (binder type, water conditions, temperature, boat speed, usage, etc.) Environmental studies show that all of the current biocides being used have adverse effects on the ocean biology. *Therma-Marine* uses no biocides, does not use ablative or sloughing techniques, and definitely has anti-fouling properties.

- **Conserves Energy.**

Working on the principle of reflectability and emissivity, creating a reflective barrier, the product has been able to show energy savings of over 50% on heating and cooling.

- **Lasts at least twice as long as most bottom paints.**

Therma-Marine has been on boats for 5 years with no noticeable wearing. Increased anti-fouling is not noticeable.

- ***Therma-Marine* is a certified fire retardant.**

Therma-Marine substantially exceeds Standard Building Code requirements for type I and Class A Materials. *Therma-Marine* has had both ASTM-D3806 flame spread testing performed by two separate approved testing laboratories with a resulting flame spread of 10 or less, and smoke contribution of less than 5.0.

- ***Therma-Marine* is environmentally friendly.**

New regulations are being enforced throughout North America limiting the use of current anti-fouling agents. No biocides are used and there is no sloughing of paint. *Therma-Marine* is very environment oriented.

- ***Therma-Marine* is compatible with all metal applications.**

The lack of impregnated metals such as copper eliminated reactions negative to application.

- **Minimal effort for surface preparation.**

Therma-Marine is compatible to most substances and therefore adheres easily. As in all paint the better the preparation, the better the application.

- ***Therma-Marine* is very cost competitive.**

Therma-Marine is less costly per-gallon than the average boat bottom paint. It not only costs less to purchase but its longevity makes application requirements less frequent. The continuous maintenance and labor costs are reduced drastically.

PHYSICAL PROPERTIES

Base Material: Copolymer acrylic latex

VOC: 115.0 g/l

Viscosity: 140ku

Total Solids

By Weight: 58.5%

By Volume: 44%

Tensile Strength: 220psi

Elongation (ASTM D 2370): 300 to 500% at break

Permeance: 9.8 perms

Flame Spread (ASTM D 3806): 10

Flame Spread (ASTM E 84): 0

Smoke Developed: 5

Steady Ignition (Minutes): Did not occur

Emissivity (ASTM E 408): 90 for wood and metal

Weatherometer (3000 hrs): No change

Durability: Excellent

Color Retention: Excellent

Film Integrity: Excellent

Solar Reflectivity (California State Administrative Shading

Coefficient Code: Title 25): 0.61

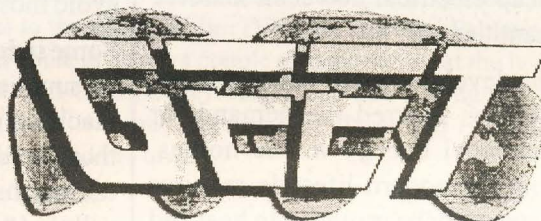

180 degree Peel Adhesion (ASTM D 4541 lbs/in 2): 450 to 500 lbs

Irradiation: Asphalt/glass fiber shingle

When it comes to your boat... We've got you covered!!!

an easy task, and is physically impossible to complete before 2000.

Furthermore, the microcircuit technology has advanced so far that the older technology is virtually unavailable at reasonable prices. The most cost efficient solution is to redesign the controllers and then go into the field and replace them. The units will end up being compact, efficient and easier to maintain, but when one considers the deadline of December 31, 1999 it becomes apparent that there may not be sufficient time to thoroughly test the circuits before placing them in the field.

The current proposed solution is to switch all of the power control systems to manual control prior to midnight on December 31, 1999 and attempt to keep the power grid running long enough to replace the controllers. Con Edison is not alone in this battle as many other power companies use the Con Ed controllers. Thus our beloved power grid is at a grave risk.

Other Y2K Concerns

We are so dependent of the electric grid, it is a national security risk. If you want to destroy a country, the easiest method is to destroy its infrastructure. It is the number one method the military uses when it wages a war. The Persian Gulf war amply illustrated how vulnerable utilities are to massive airstrikes. Furthermore, the vulnerability of utilities makes them a prime target for terrorists.

Cities are particularly vulnerable to power outages. When the power goes out in the cities for whatever reason, people revert to primitive behavior and go on the rampage with rioting, burning, and looting. I have been informed that in major cities, the rule of thumb is 7.5 minutes for serious looting to breakout after the power goes out. The civil unrest is initially more dangerous

than the long effects of food shortages (no refrigeration), fuel shortages (no fuel pumps), and disrupted communications (no radio, television, or telephones).

Businesses cease to function in such areas. Even if employees were able to get to work, they would be unable to use copiers, fax machines, COMPUTERS and a host of other office equipment. Orders would be impossible to place or fulfill.

In short, although cities provide easy access to an immense number of goods and services, they are dependent on public services (electric, water and telephone) to keep them functioning. When any of these are disrupted, chaos breaks out putting everyone's life at risk.

For these reasons, I encourage my friends to move to the country and become self-sufficient. Currently, I live in the Sonoran Desert far enough from the Phoenix metropolitan area to be able to use its facilities, but remote enough to be out of harms way if problems arise.

Our New Facility..

We will soon be breaking ground on a new facility for Exotic Research. The future facility will be designed

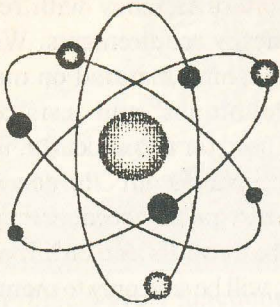

for total self-sufficiency with regards to energy requirements. We will be publishing material on our efforts, techniques, and tests of equipment used for this endeavor, in future issues of *Exotic Research Report*. Any specific blueprints, plans, and test results derived from this project, will be sold only to **members of good standing in Exotic Research** — if you are not a member, or need to renew, today is a great time to call **(520) 424-3581!!!**

The facility will feature a machine shop, electrical workshop, and automotive service area. We will be testing various power inventions and be able to determine their viability as alternative sources of power for the home. One section of the building will be electrically isolated in order that a full scale load can be tested without interruption to the remainder of the facility.

In addition to helping us get off the national power grid (which will be our *backup* power system), we will be better able to help our members increase their energy independence as well. This project will give us a hands-on background from which to give our opinions from. We invite anyone who claims to have a work-

This is a typical straw building under construction. Straw buildings may provide a low cost solution for places where an extremely high R-value is desirable.

Nova Plasma Technologies, Inc

Phone: (208) 662-5268 • FAX: (208) 662-5268

All of the applications and inventions that Sonne Ward is working on use Implosion technology. Working with (instead of against) Nature allows us to tap into energies that are natural, safe, simple and enhance life. The principles of Implosion that Tesla and Victor Schauburger developed are taken further by Sonne Ward. One of the major projects Sonne is working on is the Starship Module Home -- a giant capacitor designed using Sacred Geometry. The Starship Module Home is totally solar and captivates cosmic energies beyond our visible light spectrum. (Nikola Tesla discovered cosmic rays in 1896 over one hundred years ago!) Implosion circuits increases the power output of the home's electric panels. It has no conventional heating, cooling, refrigeration or air conditioning.

The Starship home uses the Cosmic Cooler to replace conventional refrigeration and air conditioning. The Cosmic Cooler, a large capacitor, built on Sacred Geometry principles is like a highly charged electron donor. It has an average temperature of 50°F with a mean humidity reading 116% without any moisture condensing on the ceiling or walls.

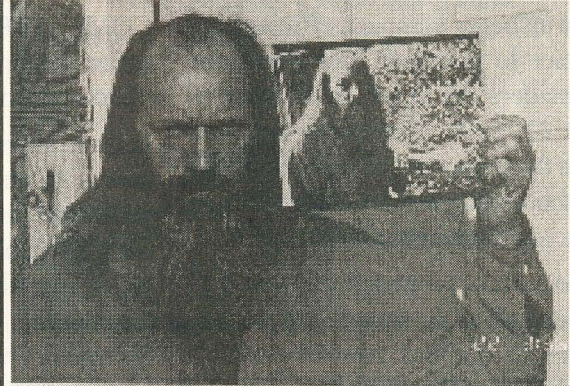

Sonne believes concentrated cosmic rays inside the chamber disassociate hydrogen and oxygen from the moisture in the concrete walls and floor which combine with organic carbon in plant tissue to produce a DNA altering compound which appear to rejuvenate these tissues. Cell tissues in produce stored in the Cosmic Cooler have re-generated in 90% of the documented cases.

Chlorophyll in living plants grown in the "Cosmic Cooler"— such as narcissus and tulips — has been cultivated with a total absence of ultraviolet or any other source of light. The plant sprouts have a dark green color although they receive zero photons.

An organic fruit spirit (fluid) that Sonne and his family have been taking this for the last five years, is cultured in the "Cosmic Cooler". Since they have started taking this spirit, a lot of rejuvenation of their bodies, from wrinkle reduction to regrowth of hair has taken place. Other effects noted are reduced arthritic pain, acne scar disappearance and improved overall health... Incredible!

Other inventions of Sonne's include the Accurate Injection Unit which allows his car to perform well, achieve high mileage, and have a totally clean tailpipe. He has also built a solar electric car with a top speed of 28mph. Finally, he has invented an implosion device that handles the trash. Sonne has invented all of these inventions to free mankind of its dangerous dependence on the grid and oil companies. Dr. Sonne Ward has written about these and other inventions in his self-published book... *Starship Module Home*.

Start your path to total independence this very moment by contacting Sonne Ward at *Nova Plasma Technologies* for further information, as well as his book—*Starship Module Home* (specially priced for Exotic Research members at \$19.95).

Astonishing Effects of LP-10

Although many of Sonne's inventions appear very "high tech", they work "with" instead of "against" nature. They tap into what is natural, safe and simple, to enhance rather than destroy life. A good example is Sonne's LP-10.

LP-10 is electron charged water (he originally used fruit spirits) that returns energy that is lost through the natural aging process and improves circulation in the body.

This liquid is cultured in Sonne's Cosmic Cooler. The food eaten from Sonne's cooler and living around this cosmic energy appears to regenerate people. Sonne's hair is growing darker and wrinkles are disappearing from his body. The new growth of Sonne's long beard is dark. His bald spot is also disappearing. The documented cell regeneration in produce stored in Sonne's cooler could rewrite medicine, biology, genetics, physics etc. as we know them today. Guests who have stayed at the Starship have also noticed improvements in their health.

LP-10 (per bottle) 25.00

Nova Plasma Tec Video

This video is a step-by-step photo blueprint of the building of the **Starship Module Home** and the **Cosmic Cooler**. A brief history of the solar powered cars and the LP-IO is presented, including how each was developed and placed into service. This is a video snapshot of southeast Idaho and Dr. Sonne Ward's experience and insight into technologies for the 21st Century!!!

Nova Plasma Tec Video (VHS) 25.00

ing device to bring it to our new facility for testing and possible installation.

Heating and Cooling

Our current facilities have served their purpose and have highlighted some of the problems of desert living that we must address. Heating and cooling is at the top. At this point, we have neither.

In the Sonoran Desert, temperatures of 120°F are common in the summertime and the winter lows hit the high 30s. To combat the heat, it is not uncommon in Arizona to have electric bills of \$400 or more for air conditioning alone. It is therefore of prime importance that we be able to reduce the energy impact of cooling... and the best way is to not allow the heat to enter the building in the first place.

Typical houses use insulation in the walls and ceiling. We will be using straw bale construction techniques for our facility. Although the walls will be extraordinarily thick, the insulating power is superb (~R110+) and will virtually eliminate heat transfer through the walls. In effect, we expect it to be nearly as good as living underground.

Of course, we don't want to live like moles so we will be putting in windows... always a source of energy transfer. Window space will be kept to a minimum and use triple plane glass at this reading. This may change as we get further down the road with our window research.

This leaves the remaining hot spot from the exterior... the roof. To maximize cooling effects, we plan on high ceilings with a sloping roof and a sun activated fan at the peak. The roof will be coated with a ceramic based paint with a high albedo (reflectivity) factor. It is our opinion that this will substantially reduce cooling requirements to the heat

generated inside by the office equipment, lighting and people.

We will be experimenting with a new radical passive approach to maintain a floor temperature of 50° without heating or air conditioning. If this is attained, the floor will stabilize the interior room temperature regardless of outdoor temperatures.

Lighting

One of the earliest uses of electricity was for lighting. The style of the building that we will be constructing mandates plenty of high quality light. As a matter of economy (keeping in mind a possible shortage of bulbs) we favor long-life full spectrum fluorescent lights. Although initially more expensive, long life bulbs save energy and reduce maintenance costs.

Lighting also adds to the air conditioning load. By reducing the amount of heat that a light source produces, one can significantly lower air conditioning requirements. With fluorescent lighting this is easily achieved with the installation of **high frequency ballasts**. By boosting 60Hz household frequency to 25kHz, the ballasts run cooler (ie "skin effect"). Additionally, the fluorescent lights are 40% brighter while using 60% less energy.

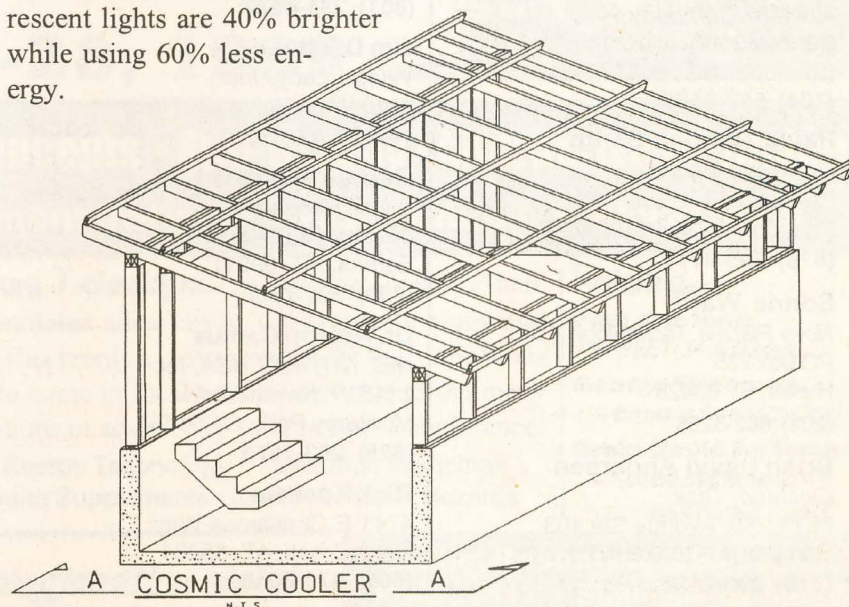

A major feature of these high frequency electronic ballasts is the tremendous reduction of maintenance costs. Anyone who has had to maintain a commercial building knows that ballasts have to be replaced quite frequently because they get hot and burn out. Electronic ballasts run cooler and can have a forty year warranty!

In future issues of the Report, we will be covering the lighting issue in depth and where to get them.

Refrigeration

Refrigeration and freezing of food is one of the most critical uses of electricity. This was driven home by the recent loss of our refrigerator and loss of the food stored in it. One can imagine the results of the loss of electricity to a supermarket or refrigerated warehouse.

We plan on building a Cosmic Cooler as invented by Sonne Ward to replace conventional refrigeration and air conditioning. The Cosmic Cooler, a large capacitor, built on Sacred Geometry principles is like a highly charged electron donor. It has an average temperature of 50°F with a mean humidity reading 116% without moisture condensing on the ceiling or walls.

The Cosmic Cooler is conceptually simple. It has eight inch by four foot footings and is integrated into the construction of the house itself.

This allows us to independently verify Sonne's claims. If it performs as Sonne claims it does, we should have no problems storing fresh produce for extended periods of time.

Water

One of the critical requirements for life itself is a stable water supply. Most pumps used in fixed facilities are electrical. During the Y2K crisis, if the electrical supply is cutoff, then the water supply is at risk. Municipalities will be unable to provide water due to a lack of pumping capabilities.

Locally, many residents here (myself included) haul water to their own cisterns, from which it is pumped into their dwellings. We face a triple threat... no electricity for local water suppliers to pump it out of the ground, no fuel for the vehicles hauling the water, and finally, no electricity at our residences to pump it out of our cisterns.

My plans include drilling a well on our property and installing an elevated 10,000-gallon water tank. By coating the tank with thermal paint, it will stay cold. The weight of the water and elevation will provide sufficient pressure throughout the system without a pump. Finally, a small engine equipped with a GEET device will be on standby as a backup to the electrical pump.

Basic Principles of Self-Reliance

Summing everything up, our basic philosophy is: *conservation first*. By dramatically reducing energy requirements, one reduces his dependence on the grid making it easier to replace the energy with a backup system... alternative or otherwise. Creativity is essential!

I sincerely hope that the year 2000 is just another year. If it does, those who take the proper precautions will find themselves ready for any fu-

Don't Miss Out... Pre-Register for the 1999 Exotic Research Conference TODAY!!

ture emergency. If it is the end of the world as we know it, then we will find ourselves prepared to deal with the new challenges of rebuilding civilization.

Even though we may be self sufficient, our neighbors may not be. My advice is to stock up enough for ourselves and as many others as our budgets will allow. I personally would rather feed a friend rather than shoot an enemy. Prepared people will be considered wealthy and therefore targets for the unscrupulous. Forewarned is forearmed.

Exotic Research Conference March 25-28 •Seattle, WA

In 1999 there will be at least two Exotic Research Conferences. The first conference will be held in Seattle, Washington during March, and the second will be held in Mesa, Arizona during July. **For a limited time**, members can receive a **25%**

pre-registration discount for the Seattle conference. In addition, low hotel room rates for attendees make it an affordable event.

We are currently putting together a tentative speaker list for the March conference which will be released in January. The July list will be posted at the end of March. Both conferences will have some truly extraordinary presentations. Plan on attending both!

For those that missed this year's conference, we do have some great videotapes available. A lot of new concepts and technologies were presented during these lectures and workshops. Get caught up on the latest info and order your set today.

Don't miss out. Pre-register today and plan on attending the hottest conference on alternative technologies with lots of demonstrations! See you in March!!! *__SRE*

Steam turbine, containing 12" diameter runner, shown feeding power to resistive load.

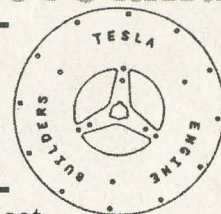

A Fully Functional Turbine Test Stand

by **John Pickard**

as documented by the

Tesla Engine Builders Association

5464 N Port Washington Road, Ste 293 • Milwaukee, WI 53217

A Need for Steam

One of the biggest difficulties in the operation and testing of a steam turbine is the availability of testing facilities. It may be possible to find a location where steam power is available but there is typically no way to properly load the turbine. Conversely, a facility may be found that has the capability of providing the required load but then there is no steam supply. This was the dilemma faced by John Pickard after the construction of several different Tesla type, bladeless disk turbines. Toward the resolution of this problem a project was embarked upon, now complete, assembling a complete test stand employing both load and steam supply.

The purpose of the machinery is to investigate the possibility of driving a Tesla turbine in a unique configuration for a possible application existing in New York City. One of the requirements was for the gas pressure to be less than eleven pounds per square inch. Most turbines have very high gas pressures. If the gas pressures are higher, it is a regulatory requirement to have a full time technician on duty.

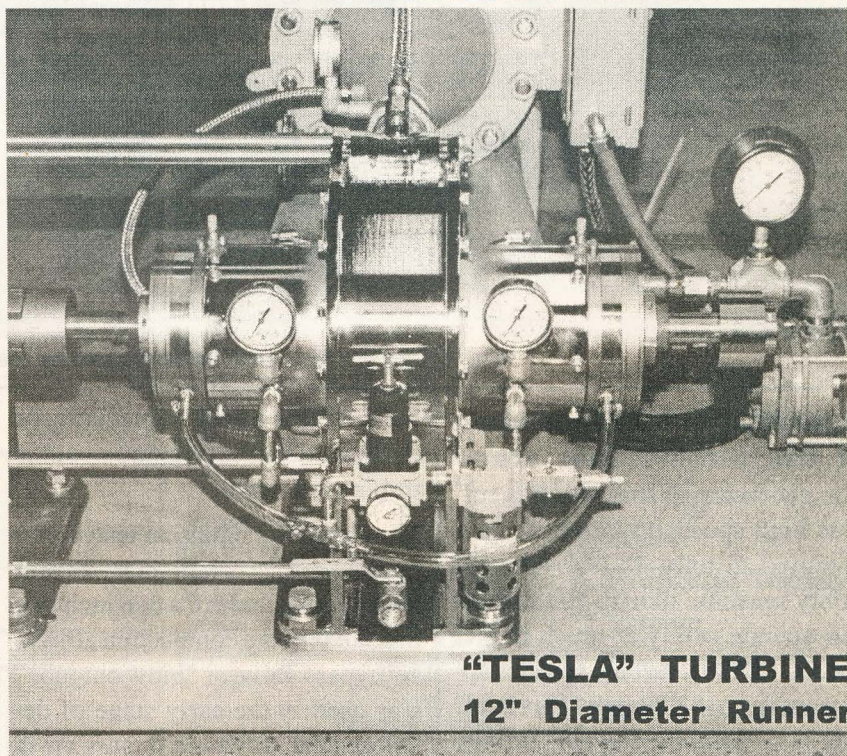

The reason a low pressure system is being investigated is because there are many apartment buildings in New York City which are supplied by steam, via an old central steam distribution infrastructure that dates back to when Tesla was do-

ing testing at the Edison Waterside Station. The Edison utility has advised the apartment building owners that sometime in the year 2,000 they are discontinuing their steam supply, abandoning the maintenance of the steam infrastructure. The apartment building owners are therefore being forced to find new ways to heat their buildings.

There is also a demand for electric power, as it is very expensive on the east coast. The idea was to produce hot water and steam with a

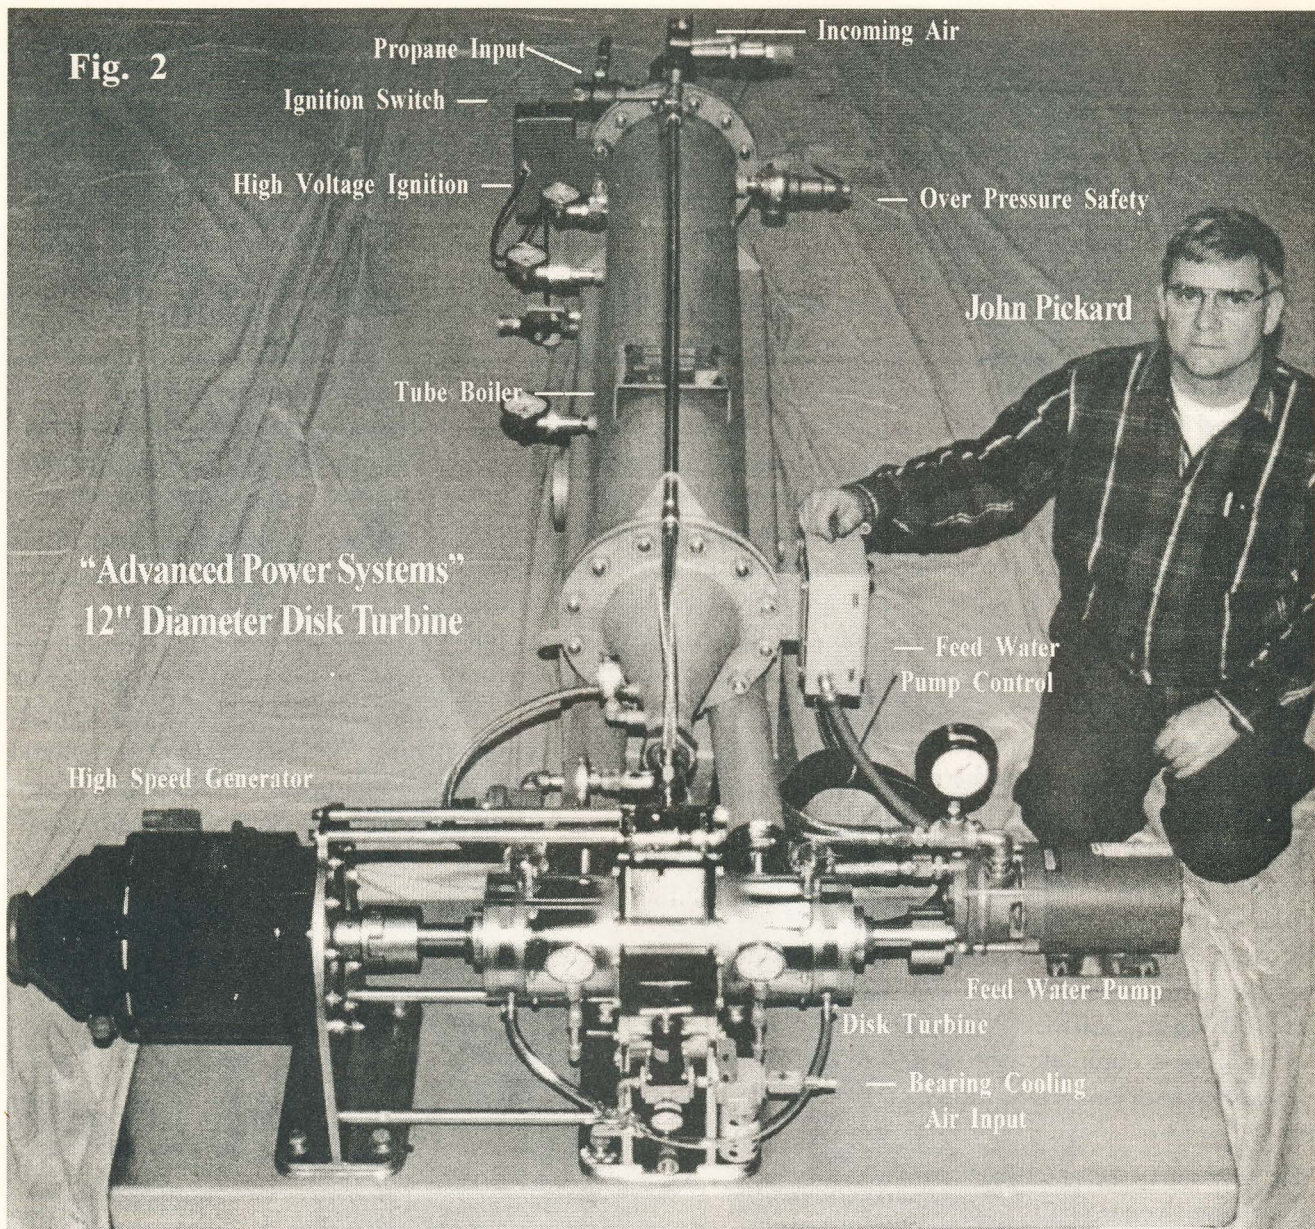

turbine genset, thus allowing production of electricity in small packages while providing for a building's heating requirements.

The boiler is not very efficient in this unit because it is small and therefore a compromise, but it does provide high pressure steam, allowing the establishment of a performance base line for the turbine. The New York project could be successful with properly designed heat exchangers and steam generating components.

"TESLA" TURBINE
12" Diameter Runner

The most economical of the present prime movers is the Diesel engine. But, quite apart of many practical and commercial drawbacks, inseparable from this type, it is entirely dependent on comparatively expensive oil, so that the Tesla Gas Turbine, working with much cheaper fuel, would have the better in competition even if its efficiency as a thermodynamic transformer were appreciably lower, all the more so in view of its greater mechanical perfection. *Nikola Tesla*

John Pickard and his Fully Functional Turbine Test Stand.

Operational configuration of the turbine test stand

The generator on this unit is a surplus high speed B52 aircraft unit, operated at only 11,000 rpm for safety reasons, though the turbine can operate safely at much higher speeds. Optimal turbine speed is approximately 18,500 rpm. This R&D unit is a "combined cycle" turbine that incorporates a central low pressure runner section, fed directly by combustion waste gases, as well as dual high pressure steam input sections, at each side of the runner.

Following is a brief explanation of the operational configuration of the turbine test stand.

The first component, as tested, is a positive displacement rotary blower (Fig 6) connected to a two inch line that feeds in the combustion air. An air bypass valve or "blow out tube" was used in the early stage of development. It would bypass air in order to be able to start the burner without blowing out the flame. The bugs are now worked out so that the burner starts instantly without the air bypass requirement. Note the pres-

sure gage (visible in Fig 1&5) for reading incoming pneumatic pressure.

The air inlet is connected to a conical diffuser section that slows the velocity and increases pressure. A stainless steel flange connects this diffuser to the burner manifold. A feed line supplies propane gas through this flange into the burner jets. A gage is visible above the stainless steel flange which indicates the propane fuel pressure. Beyond this flange is the burner section which contains a high temperature ceramic refractory lining.

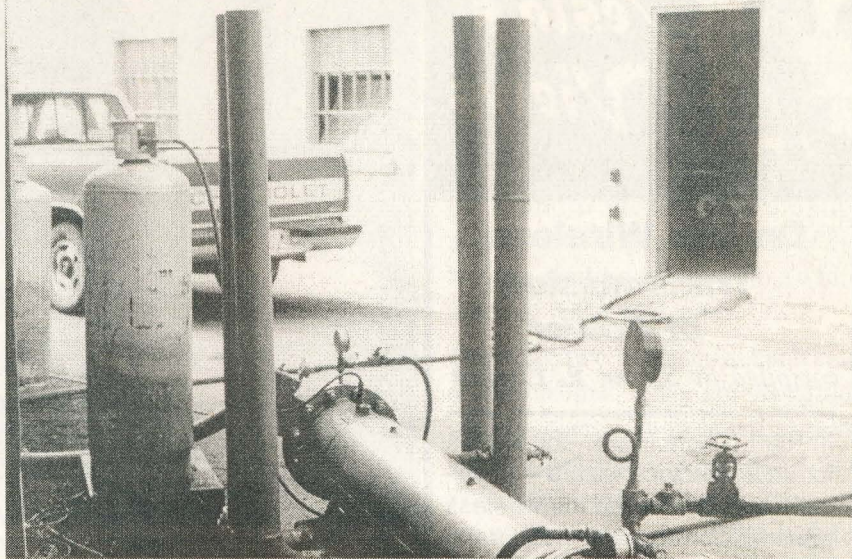

Adjacent to this area, mounted to one side, is a high voltage ignition box, containing a spark coil and ignition switch. A wire connects from this box to a spark plug protruding through the burner housing wall.

The next section is a duct tube coil boiler. It uses about 120 feet of coiled tube, 1/2" schedule 40 steel pipe. The main burner tube is eight inches in diameter. There are two jacked cavities beyond the main inside barrel.

The unit employs a 2 hp, three phase, 220 volt 3,450 rpm boiler feed water pump, supplying ten gallons per minute flow @ 200 psi. The feed water pump gets its water from the large tank structure under the tube boiler. This pedestal base serves four purposes: It supports the burner/boiler; is a water reservoir for the steam boiler; acts as a muffler; and heat exchanger.

Water that feeds the reservoir tank, which is the input for the feed water pump, at atmosphere, is just city water. The only treatment is accomplished by passing the water through an allotropic water treatment cell. This cell changes the molecular polarity of the minerals in the water so that they will not ad-

Fig. 3

The Propane Fuel Tank Sits Upon a High Resolution Scale

here to the components of the boiler tubes and turbine.

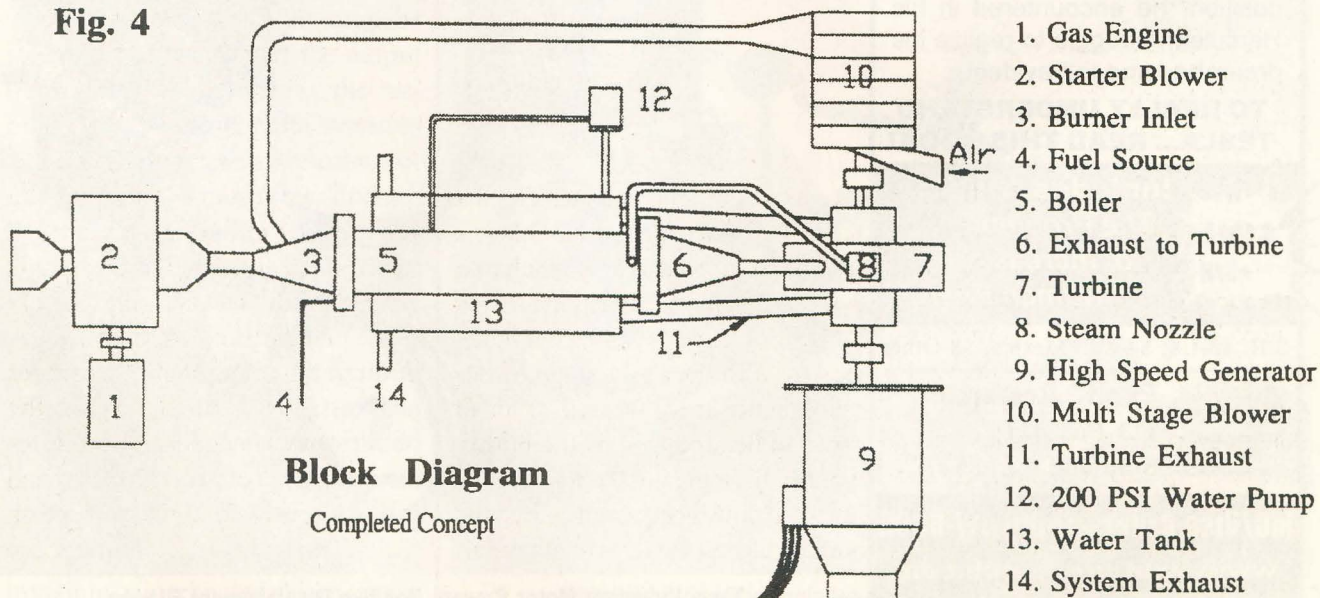

The feed water pump takes water from the tank and feeds the outer jacket of the tube boiler. The water then transfers through a hole to the inner jacket, thus preheating the water before it is fed to the boiler coils.

The steam coils are wrapped around a flame several feet long, generated by the burner. The burner exhaust does not go directly to atmosphere, as in a conventional steam tube boiler, but travels through a cone at

the end of the tube. This then feeds into a 1-1/2 inch pipe supplying the "low pressure," center section, of the turbine runner (see photos). To prevent excessive back pressure, wider disk spaces are employed in the 1-1/2 inch central portion of the turbine runner which is fed by the output of the combustor.

The turbine runner is a total of 4 inches wide. The outer 1 inch sections of the runner are constructed using narrower disks and spacers and are fed with high pressure

Fig. 4

On the Wireless Transmission of Power

compiled by *Steven R. Elswick*

In 1899, Nikola Tesla—the world's foremost electrical wizard—physically **demonstrated** the wireless transmission of power in Colorado Springs. Over the next fifty years, Tesla failed in his numerous attempts to bring power to the people. These articles and letters to various editors form a clear, coherent, and articulate visualization of **Tesla's concept of power**, and how he could move immense amounts of currents through the earth with his magnifying transmitter.

Tesla's famous article... The problem of Increasing Human is included in this compilation. As you read Tesla's writings, you will realize that his dream of wireless power IS quite practical and the obstacles from the "organized opposition" he encountered in his Herculean struggle to realize his dream become self-evident.

Fig. 5

Two Minute Start Up Involves Bypassing Hot Water and Wet Steam.

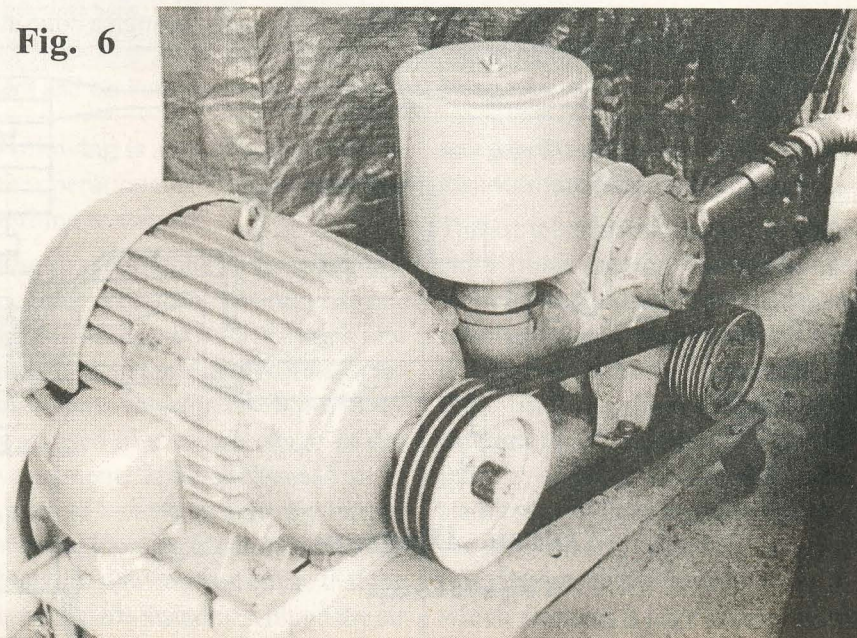

steam from the steam coil output. The end disks on each side of the runner are 1/4 inch thick. The center runner section employs .06 inch disks and spacing, while the high pressure outer sections of the runner use .03 inch thick disks and .03 inch spacings. The next issue, #15, of the *Tesla Engine Builders Association* (TEBA) newsletter will contain photographs detailing the turbine's internal construction.

There is a pressure gage at the low pressure inlet to the turbine (output of the burner). It indicates approxi-

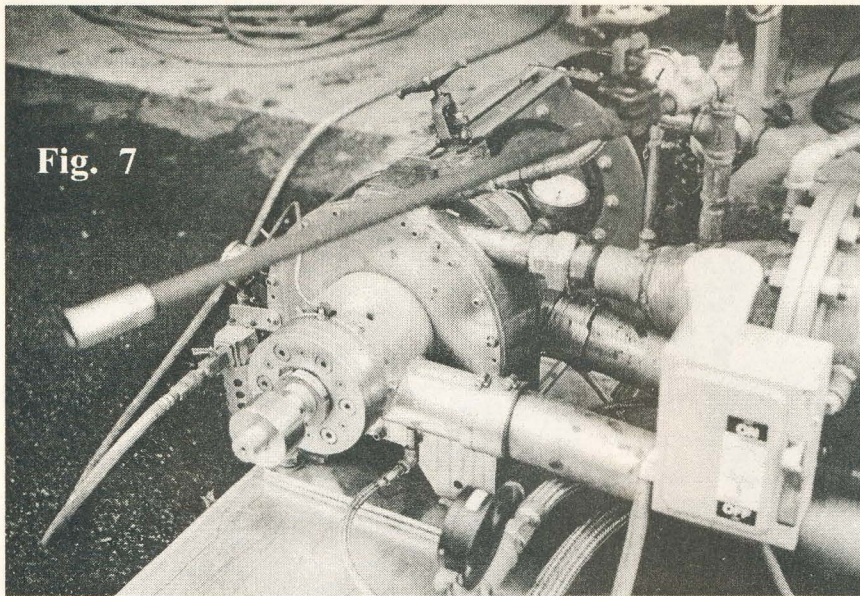

mately 8 psi when the turbine is running. It is interesting to note that the turbine will operate and produce several horsepower using only the output of the low pressure burner section which provides just 8 psi of inlet pressure to the turbine.

There is also a temperature gage at the low pressure turbine input. The gas temperature, after giving up some of its heat to the steam coils, has been operated as high as 1,200°F without damage to the turbine. It is usually run, however, at between 750-800°F.

Fig. 6

Tesla Induction Motor Powers Positive Displacement Blower

Side View Includes Exhaust, Bypass Nozzle, Feed water Control

The coils contained in the steam generator produce 180 psi or more of pressure and absorb approximately 1,000°F of available heat so only about 1,000-1,200°F maximum temperature is applied to the center, low pressure section, of the turbine runner.

Sonny Entrican, President of *Entrican Vacuum Products*, where this turbine was tested, has developed a very good technique for operation of the boiler. It involves the steam bypass tube pictured in Fig 7. First the feed water pump master switch is engaged, drawing water from the reservoir through the steam coils. Instead of the output of the steam coils feeding the turbine, the steam coil output bypasses the turbine, using valves, into the protruding pipe to atmosphere. Enough water is allowed to flow through the steam tubes and out the bypass pipe to expel all of the air in the system. After the air has been expelled and water is flowing freely the ignition switch is thrown, activating the spark plug. The main air is turned on (Fig. 6) and then the propane valve is opened.

Within just two minutes time, dry, invisible, superheated steam, at ap-

proximately 300°F is at the output of the bypass pipe. Running the burner harder, it has been possible to produce 600°F steam. The turbine input valve is then opened and the bypass valve closed, just before the steam becomes invisible (Fig. 5).

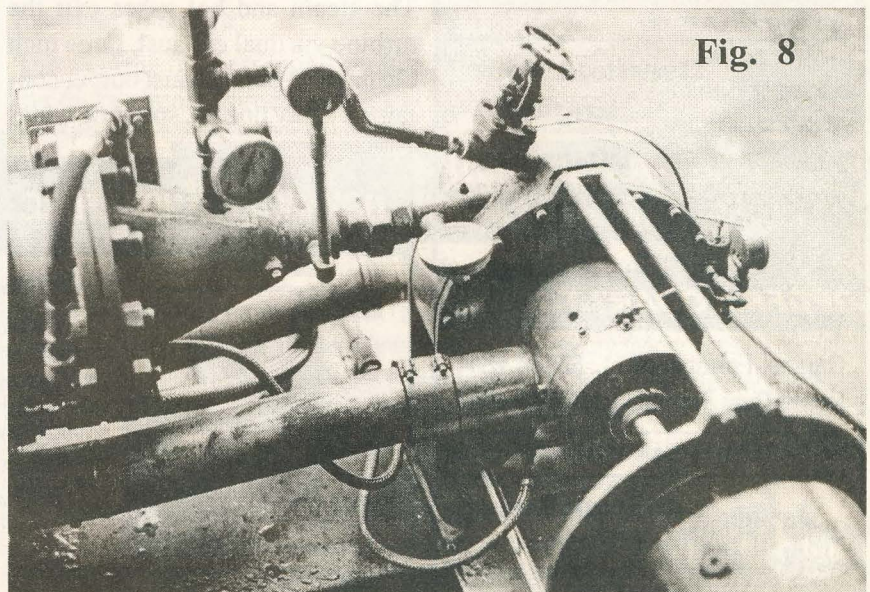

Note the nozzle mounted at the end of the steam bypass pipe discharge. It is a diverging type nozzle simulating the nozzles contained in the turbine. The high pressure steam feeds a hollowed out block, on the top of the turbine, which directs the steam to similar diverging type

nozzles, directed at each of the two high pressure runner sections.

The rotor and shaft of the turbine weighs approximately 100 lbs. There is a 25 lb armature in the generator, for a total of 125 lbs of rotating mass. Speed is determined by a photo tachometer pickup, mounted at the generator side of the turbine, reading pulses from a white piece of reflective tape.

There are two bearings at each side of the turbine. They are very high quality, class 7, high speed angular contact bearings. The shaft turns very freely. An air line and regulator at the front side of the turbine provides air cooling to each of the bearing housings. The heated air exits to atmosphere through a hole at the bottom of each housing.

The turbine pedestal base is constructed from 1" thick carbon steel, overlaid with stainless steel to prevent corrosion. The generator is attached to a carbon steel mounting plate that has been nickel plated. The turbine housing has also been nickel plated. The support struts between the generator and turbine are all exactly the same length and provide for perfect alignment of the couplings.

MC/Visa Orders: (800) 417-6399

Fig. 9

Note the Photo Pickup Mounted Between Turbine and Generator

The cables from the generator feed power to a resistive load bank. Generator electrical load is adjusted with a control which varies the field current. The load bank contains a main switch panel with voltage and current meters. There are four separate distribution switches allowing the load to be brought in 25% at a time. The load array consists of ninety six, 750 watt, ceramic/tungsten heating elements. The load array is therefore capable of approximately 100 hp of continuous dissipation.

The steam and hot gases exit the turbine via dual exhaust, three inch channels. Each exhaust output contains a spray nozzle, spraying water

pressurized by the feed water pump into the exhaust gases for heat recovery. It must then pass through two stainless steel filter screens. What does not give back its heat and condense in the water tank goes out the exhaust stacks. The output temperature of the exhaust stack is only about 170°F.

Efficiency?

The thermal efficiency, as far as heat in versus heat out, is very good. The efficiency, as far as mechanical power, is mainly at the expense of the boiler, which is much too small to provide the power required. If the boiler was 4 or 5 times larger then it would be up in a very competitive efficiency range.

P.O.Box220
Bayside, California 95524

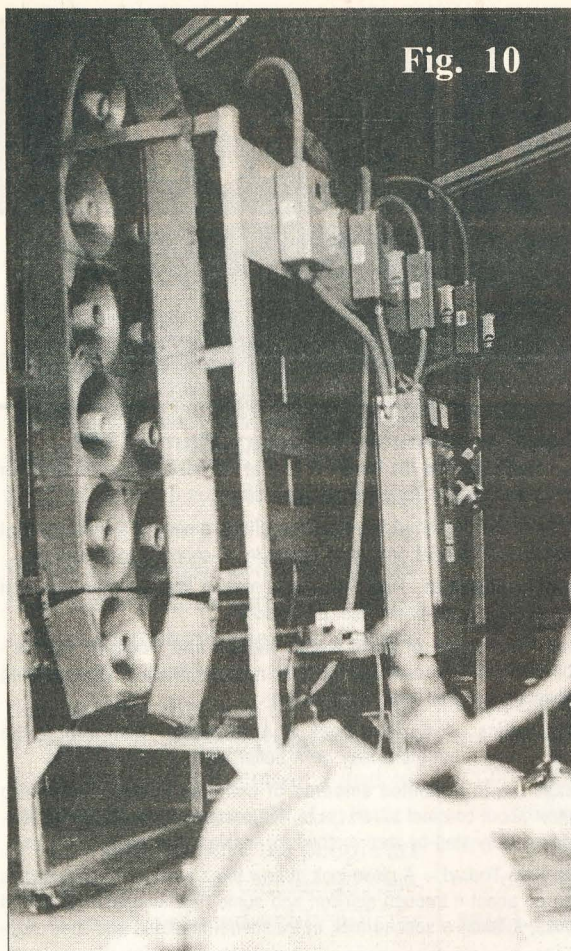

Fig. 10

Ceramic/Tungsten Load Bank

Electrical output power is determined by multiplying the volts by amperes from the generator and dividing by 746 to determine hp. The measured power consumption of the rotary compressor and water feed pump motors is then subtracted from this number. The fuel consumed in pounds is converted to available hp. Efficiencies can then be approximated. No allowance was made for generator inefficiency.

Total thermal efficiencies, on this basis, have been determined to be approximately 8% due to the low efficiency of the steam boiler. The conversion efficiency of the turbine was, however, calculated to be in the high 30s, very similar to the single stage turbine efficiencies determined by Tesla.

More information on efficiencies and the internal construction of the

turbine will be presented in the next issue of *TEBA News*.

A Vital Detail

One very important construction detail, determined vital for turbine efficiency, is a drain hole machined into the bottom of the turbine case ring. If not used, water will accumulate in the case ring and flood the runner. This flooding effect parasitically loads the turbine, destroying the efficiency.

After this problem was discovered, a 3/4 inch hole was drilled and tapped into the bottom of the case ring and a pipe and valve attached. It was discovered that when the valve was left open, during operation, that

there was insignificant pressure loss through the open hole. The working fluid had already fully entered the disks before it could reach the drain hole, located on the opposite side of the case ring, so pressure loss does not occur.

The working fluid essentially enters the disks almost immediately after

leaving the nozzle. This drain hole is a very necessary item and must have been used by Tesla as he employed saturated steam. This explains why very poor efficiencies have been experienced by others in the past while attempting operation with steam.

Future Plans...

It is *Advanced Power's* desire to sell this equipment to further the research. They will consult with the buyer if desired to take it to the next level of development.

Advanced Power and *Entrican Vacuum Products* have proven that the Tesla turbine can be made to do work. It is up and running and improving total package efficiencies is simply a matter of better heat exchangers and a more efficient boiler.

By visiting the *Tesla Engine Builders Association* web site at:

Advanced Technology Available TODAY!!!

End of the GEET Tour...

Molley and I gave all our furniture to our children, put our personal things in storage, and went on the road for a year to spread the word of the new technologies that can and will make a difference. Together, we decided that this was the only way to get the new technologies to the grass roots of this country and all countries on our great planet. Molley and I believe the people are ready for a change, cleaner air, better mileage, reduced utility bills, as well as better life styles.

We have attended many different conferences and gave public demonstrations to all that have shown interest in GEET technology, as well as showing ALL of the new technologies that GEET wants to bring to the general public! Molley and I have been in over 38 States, lectured to many home schools, church groups, and several Christian based colleges, and have made many new friends. Now, there are scientists from around the world really interested in this new technology. They are now studying this strange new science.

Our primary objectives accomplished, Molley and I have decided to settle down once again in Salt Lake City. We will no longer be going on the road except for a very few select conferences. This will give me the time I need to further perfect my GEET technology and

thoroughly test some of the new technologies we are acquiring. At the time of this writing, the only conference we have committed to is the July 22-25 1999 *Exotic Research Conference* in Mesa, Arizona. Those interested in seeing the GEET technology demonstrated should plan now to attend this conference.

The next few months will be busy ones as I am focusing on expanding applications of our primary GEET technology, and fully testing some of the products we have acquired or are interested in the acquiring. Initial efforts are already paying off.

Mini-GEET Product Line

Currently, we are offering the *Mini-GEET*, Models A and B (Model C is under development). The *Mini-GEET* is not a full GEET device.

Whereas true GEET technology utilizes both vacuum and heat to generate a plasma with measurable electromagnetic effects, mini-GEET units utilize only heat and do not create a plasma.

Mini-GEETs are new mileage saving devices using a system designed to *preheat* the fuel for better combustion. Tests conducted on many different automobiles show mileage increases of 25% or more.

We have found in tests that the Mini-GEETs perform best in temperatures 70°F and under.

All of the testing performed by the inventor was done in the colder climates. After we placed these units in distribution nationwide, we began receiving reports from the warmer parts of the nation that fuel savings

It's Official...

**Paul & Molley
Exchanged Vows
July 26, 1998**

The highlight of the 1998 *Exotic Research Conference* was Paul and Molley's wedding. It was a fairy tale wedding. Molley only had 2 days to prepare for it and it went off without a flaw. Many thanks to *Wendy Berry*, for all her wonderful help running Molley around from store to store, helping in any way she could to make this such a wonderful day. *Tom Berry* was Best Man, *Wendy Berry* was Matron of Honor and *Steve Elswick* gave Molley away.

The entire staff and some of the volunteers at the *Exotic Research Conference* helped with all the other arrangements for their wedding. For instance, the *Patriot Matchmaker* (*Marilyn Gardner*) provided the minister -- *Mert Pekrul*. Molley thought she would have to buy a sheet cake, but *Beryl Milgate* introduced Molley to her friend *Phillis Dickey*. Incredibly, *Phillis* created a very beautiful and delicious wedding cake in less than 24 hours.

After the wedding, everyone went to the all-night reception. It was a great time of rejoicing and relaxation. What a great way to end a wonderful conference!

Mini-GEET

**Increase Your
Gas Mileage
TODAY!!!**

YOU asked for it... YOU GOT IT!!!

**An inexpensive, easy-to-install
energy saving device
that will last as long as your car!**

Install one the mini GEETs on your *gas or diesel* engine today and discover the amazing benefits of:

- Cleaner burning
- Prolonged engine life
- Smoother idle
- More power!

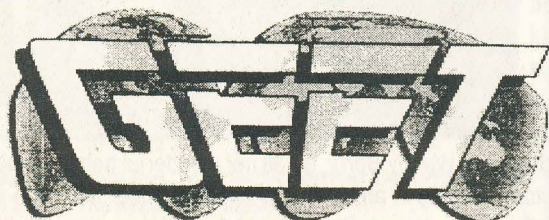

Tests conducted on all three major auto brands show mileage increases of 30% to 71% (on trips greater than 5 miles and with ambient outdoor temperatures of 70°F or less).

A TRUE Bargain...

valve in this line.

This easy to install unit comes with all necessary hardware.

Unit will last as long as you own your vehicle or we will replace it free. Fuel Mileage increases will not be realized on short trips (less than 5 miles) or on engines without an operating thermostat. The engine must reach normal operating temperature to realize increases in fuel economy.

GEET is not responsible for improper installation or leaks from installation of lines. Any alteration, modification, or tampering with this device will void all warranties. Warranty is limited to the original purchase price of this unit only.

TYPICAL SAVINGS

Based on a driver averaging 20,000 miles per year installing the Mini-GEET with an average mileage increase of 40%.

BEFORE Mini GEET Installation

Average Mileage 17mpg
Gallons per year used 1,176
Ave. Cost Per Gallon \$ 1.15
Total Annual Fuel Cost \$1,352

AFTER Mini GEET Installation

Average Mileage 24mpg
Gallons per year used 883
Ave. Cost Per Gallon \$ 1.15
Total Annual Fuel Cost \$ 958

Total Annual Savings \$ 394

MILEAGE ROAD TEST RESULTS

MAKE/MODEL	TYPE	BEFORE	AFTER	INCREASE

90 DAY MONEY BACK GUARANTEE IF NOT COMPLETELY SATISFIED

were less than projected. Further investigation revealed this discrepancy in the testing process. We have just recently discovered this, and apologize for the confusion.

Two of the Mini-GEET models are commercially available for installation now:

- **Model A** - gas engines up to a 3/4 ton.
- **Model B** - gas or diesel trucks from 3/4 ton to 2 1/2 tons.

There is a 25% *guaranteed* increase in mileage. Mini-GEETs increase horse power, and reduce emissions.

For the big rigs and busses we are presently testing the Model C. Initial testing has shown a 10% improvement in mileage as well as more power and less pollution.

GEET is offering a *special rebate to the first 100 units* that are sold for further testing. The rebate of \$100 will be sent out once we receive a letter, from the participants in the testing, stating the benefits that they realize after installation of the Model C.

If you would like to participate in this program contact GEET Management at 801-281-4577 or fax us at 801-281-4578, or write us at 213 West 4800 South, Salt Lake City, UT. 84107.

GEET Plans Available

I have been giving workshops to those interested in buying the GEET construction plans, that gives a license to retrofit up to 10 engines for personal or family use only, not for manufacturing or any other purpose, so that you can utilize the technology NOW.

The interest in the plans has prompted a video of the workshop. Now the plans will be available to everyone without having to attend a workshop as before. Molley and I feel that this is the only way to be able to reach out to more people, that

are really interested in this technology. By putting it to use, you can start saving money on fuel costs as well as reducing the pollution now!

We wish to emphasize that this is new technology, not fully understood, and that results may vary depending on a number of variables including workmanship of the person constructing the device. Often, under these conditions, fine tuning of the device may be required... much like that used in constructing Tesla coils (another one of those "black arts" of the technical world!)

Even in the world of traditional science, plasma research is in the infant stage. However, the only way Nature gives up its secrets is by courageous individuals taking chances and experimenting continuously with the technology. We encourage everyone who has the capability to buy a set of plans and help us explore this new frontier of plasma-based combustion.

Neltron Turbo Battery.. Under Test & Evaluation

GEET's mission is to help clean up our environment and save you money, while extending the limited supply of fossil fuels for future generations. GEET is bringing the latest

state of the art technology from many inventors, so their inventions can get out to the world. However, before they are released by GEET, they must be rigorously tested by GEET as GEET is no longer relying solely on the inventors' test results.

One of the most impressive potential inventions that GEET is testing for commercial distribution is the **Neltron Turbo Battery** invented by Dr. Nelson Camus. This is a reverse ion, multiple fuel cell, with positive and negative electrodes, separated by a solid polymer membrane. The catalyst is made of platinum and promotes separation of electrons and protons.

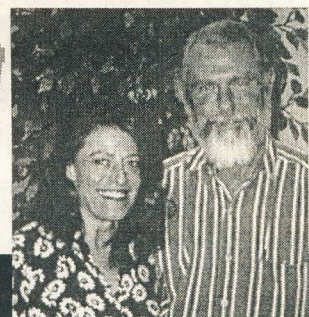

According to Dr. Camus, since the electrons don't pass through the membrane they are conducted as electrical current. The protons, migrate through the membrane to the cathode. The platinum catalyst prompts a reaction with oxygen from the air and the electrons to form a "hyperconductive air mass." This vapor is charged with multiple ions, creating spark crowns on the pistons' surfaces when fed into the fuel line.

Single fuel cells are bound together in the Neltron cabinet to provide

The Paul & Molley Show

**Sundays • 6-9AM Eastern
5.070 MHz (Shortwave)**

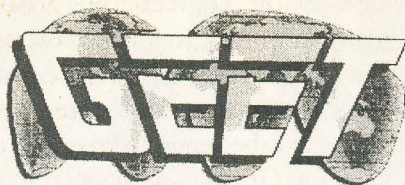

Live Talk Radio....

Paul and Molley Pantone (inventors) discuss GEET technology and all the other wonderful technologies that GEET is bringing out to all the people on this planet. They also discuss people, inventors, doctors, and others that have spent their lives inventing, writing and healing. Their message to the word:

We do not have to do things as they have always been done, there are ways to make life better and we must start using these alternative methods for improving our world.

Broadcast by Republic Radio and WWCR, Galaxy 7 Transponder 14, 7.71 aux, mono-wide band and some East Coast AM stations, this is a live talk show, so call in and talk to them personally.

Global Environmental Energy Technology

GEET Technology is cutting edge technology... as a result developments in the field and with the company can move quickly. **Sign up for the GEET Sheet** to get the inside track on these developments as they happen...

- Join Paul and Mollie as they journey across the country promoting GEET technology
- Learn what other researchers are learning about GEET
- Get the latest "tech tips" on retrofitting vehicles
- Get answers to tough questions in Paul's "Q & A" section
- Get the lowdown on exciting new products upon release... products that can save you time and money!

The **GEET SHEET**'s goal is 12 issues per year. However, due to time constraints it may vary... but you will get timely information on GEET and GEET Technology — information you won't find elsewhere! Cost is \$65⁰⁰ for 12 issues

Information Available from GEET Management

GEET Info Packages \$25⁰⁰
 GEET '96 Video \$42⁹⁵
 GEET Sheet (12 issues) \$65⁰⁰

Call today to get the latest information on the technology of the FUTURE!

<http://www.geet.com>

electric power like a battery. It does not replace your existing battery, but *supplements* it. (The complete Neltron theory can be found in the April/May/June 1998 issue of *Exotic Research Report*.)

The **Neltron Turbo Battery** is initially more expensive, because platinum is used. But great savings result due to longevity, enhancement of efficiency and significant in direct savings. Dr. Camus states there are 10 reasons to use the **Neltron Turbo Battery**:

1. Supercharges engine Horse Power
2. Drank boosts engine TORQUE
3. Extends engine and transmission life
4. Reduces POLLUTING EMISSIONS
5. Cools engine running temperature
6. Extends oil's viscosity
7. Inhibits engine lubricant breakdown
8. NO CORROSIVE TERMINALS
9. No acid liquid
10. High Cold Cranking Amps.

Dr. Camus also gave us a copy of an emissions certification from Jalisco Mexico, where a number of police cars have the Neltron installed on their vehicles. Here are the official test results:

	BEFORE		AFTER	
	IDLE	2400rpm	IDLE	2400rpm
CO	1.52	0.12	0.09	0.00
CO ₂	12.5	15.9	14.6	15.9
HC	342	52	92	11
O ₂	2.87	0.00	0.84	0.17

According to this document there is a 78% reduction in hydrocarbons and NO carbon monoxide. It also has a guaranteed 40% improvement in mileage, with a 10 year warranty.

We now have the batteries for internal testing. We are currently determining the operating parameters, installation requirements, and running our own performance tests. We will post you as to the results.

Purple Plates Available

The **Purple Plate** is a positive energy plate in which the atoms and electrons of the aluminum have

been altered so that the plates are in resonance, or in tune with the basic resonance, of the energy of the Universe. They function as transceivers... creating a field of energy around themselves that penetrate any material substance by osmosis.

This energy is very beneficial (the life-force energy) to all life. The plates also seem to neutralize anything negative in food or water as well as alleviate pain. Almost everyone that has used this plate claim that their pain is eased or completely removed.

Richard Robbins, President of GEET Management, has a history of migraine headaches. He has actually been hospitalized for these headaches. Since Molley gave him a **Purple Plate** he claims not even to have a twinge of pain in weeks—except for the one day he forgot the plate on his dresser at home.

Many others have made these claims, and the **Purple Plates** are selling so fast it is hard to keep them in stock. Even Molley's granddaughter Jessica, only 20 months old, takes her plate and makes her "owees" better. When a child feels the positive energy of the plate, and knows it helps them, that is the greatest testimonial of all. We have people of all ages that will not go anywhere without their Purple Plate close at hand.

In the next few weeks Paul and Molley are testing a special unit that has claims of enhancing plant growth. Initial testing has proven to be very positive and should be completed soon.

The Anti-Aging Manual

The Anti-Aging Manual by Joseph B. Marion is a 1300-page almanac, that is unsurpassed for its clear concise style and breadth, in organizing a sometimes complex and misunderstood field of knowledge, but critical

for healthy immune systems. This manual is a practical study guide for successfully educating professionals and the general public in the most effective applications of natural disease prevention and health care yet published.

Joseph Marion has dedicated almost 30 years of work in the natural foods industry studying, researching and gathering information on the purely natural healing elements and techniques. This interest has resulted in over 9 years spent craning this most amazing manual.

Everyone can use Marion's manual for optimal health all that people need to open their minds to the power and grace provided by divinity through nature. The Manual is now available through GEET.

The Paul & Molley Show

Every Sunday, Molley and I get up in the wee hours so you can hear the latest as to what we are up to and then call in to ask us questions.

The Paul and Molley Show started on short-wave radio on 5.070, but is now also available on satellite on Galaxy 7 Transponder 14, 7.71 auxiliary, Mono-Wide Band as well. Please tune in every Sunday morning 6:00 am. to 9:00 am EST.

If you would like to hear the show and do not have a short wave or satellite dish, you can order copies of the show from Mike Grady. Mike is a disabled Vet that started taping the show when it first started broadcasting. You can order one or all of their broadcasts from him. Each show lasts 2 hours, so you receive two-one hour tapes for \$7.00, this includes shipping and handling. To order, please contact:

Mike Grady

The Final Word...

Steve can sure put on a conference, his was one of the best I've ever

been to. He had wine and cheese socials every evening so visitors and participants could mingle, compare notes and ideas. There were many people experiencing a conference for the first time, and the awesome response from all of them was a wonderful experience to share.

While participating in the 1998 Exotic Research Conference, between preparations, Molley and I were able to meet Ralph Bergstrasser... an elderly inventor. Ralph holds many patents and has toured the world. He told us, when he was a young man, he helped out Nikola Tesla when he was homeless in New York City. He is a very brilliant, caring gentleman and we had a nice visit.

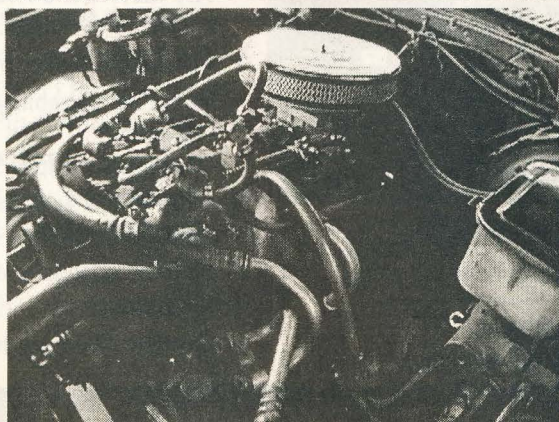

It is never too early to start planning for next year's conference. Such conferences provide unusual opportunities for everyone. Your attendance is extremely important as it gives all of us technology mavericks encouragement!!! **PP**

At The 1998 Exotic Research Conference

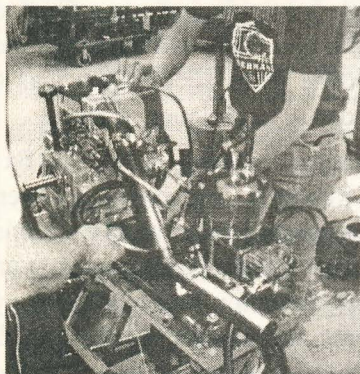

One of our more memorable occasions this year was our participation in the 1998 Exotic Research Conference, in Mesa, Arizona. This was one of the best conferences we have ever attended. Here are just a few of the items we demonstrated. For nonbelievers, let it be known that Molley and I crisscrossed the country in the infamous grey suburban. In doing so we learned a lot about the operating characteristics of the GEET device mounted in the engine.

At the Exotic Research Conference there were many inventors with inventions that will help all of mankind. Many of these inventions were offered to GEET. Once they are tested and approved, they will be offered to you.

10HP GEET DEALER DEMO ENGINE

This engine runs on just about any thing...

These engines are capable of running on waste materials mixed with gas. Some examples are: lamp oil, used and new engine oil, pig manure, transmission fluid, soda pop, pickle juice, and the list goes on. These units are for testing and demonstrating the technology. They have no float, and must be manually operated. The fuel chamber is a glass jar, so during the demonstration viewers can see the "fuels" being vaporized in the tank. These units were built specifically for demonstrating that GEET works and to develop theories of operation. *They have no hookups for loads.*

5 KW GEET GENERATOR

Retrofitted with the latest in GEET technology, these *Coleman Generator* sets are powered with dependable 4-cycle *Tecumseh* engines with cast iron cylinder sleeves, electronic ignition, and extended operating life with a one-year limited warranty.

Completely self-contained within a full perimeter, 1" steel wrap around carrier, as well as an easy access control panel, these portable units can place up to 5000 watts at 120VAC or 240 VAC anywhere you are using similar devices. Great for emergencies, on the job, or camping.

Featuring:

- Up to 5,000 WATTS of portable power
- 5-gallon fuel tank capacity
- Easy access control panel
- Low oil shut-off protection
- Full perimeter, 1" steel wrap around carrier
- Two 120VAC and Two 240VAC (60Hz at 3600 rpm) outlets.
- AC circuit breaker protection
- Multi Fuel Capability:
 - Gasoline
 - Gasoline and up to 50% Diesel fuel
 - Gasoline and up to 50% Kerosene
 - Gasoline and up to 50% Heating Oil
- Up to 50% longer running time over standard unit
- Up to 80% reduction in harmful emissions

Stop the pollution! Order Yours Today....

ADVANCED GEET TECHNOLOGY -- AVAILABLE TODAY!

"Dumanis Kyklos" The Power Wheel

Calvin Bahlmann

International High Technology • Rt 3 Box 103 • Shiner, TX 77984

Introduction

Inexpensive or free energy (not really free) is the dream of all who pay utility bills. Three-fourths of the world does not even have electricity, so those who have no electrical energy at all will welcome the power wheel, a hybrid version of the *thesta-distatica*.

Alternative energy researchers at *International High Technology* and *Nu Energy Horizons* have developed energy producing devices and machines for mankind which will change the way people energize appliances and other devices that require electrical power.

Two major classes of energy producing machines are needed, one for solid state or non-inductive loads and one for inductive loads. Lighting requires a less expensive power unit than one for inductive loads such as motors, however most use will come from units designed to adjust to all loads.

This article discusses the development of energy producing rotating disc machines. *Wimhurst influence* machines, the Swiss machine *Thesta-distatica*, and the Bahlmann *Power Wheel* are energy producing machines. The principle of operation for the two latter machines is not well known.

Wimhurst machines are used mostly for demonstration and scientific research and are not suited for providing the energy needs of a home or business.

Present day researchers trying to reconstruct the *Thesta-distatica*

have gone down long, complicated, unproductive avenues with few answers. These questions remain:

- How does the *thesta-distatica* produce so much energy for its size?
- How is the high voltage stepped down?

The *power wheel* and other solid state energy producing devices are now a reality in the labs of *International High Technology* and *Nu Energy Horizons*. These efficient machines will be the most magnificent machines the world has ever seen. The pre-production phase of the manufacturing process is near completion.

Wimhurst Influence Machine Design Features

The following description of a Wimhurst influence machine is elementary. For a detailed description and construction information see the book *Homemade Lightning* by R.A. Ford.

The Wimhurst machine uses counter-rotating discs that rotate at between 2,000 and 3,000 rpm for best output. Small to medium size

Wimhurst machine output can be from 10kv to 75kv and higher. Machine construction, weather conditions, diameter of each disc and speed of rotation determine output.

The original Wimhurst machines were turned by hand. Four pulleys and two belts connected to a common crank shaft made the discs rotate. Both belts were on the common crank shaft but, one belt was twisted 180 degrees so it would turn one disc in the opposite direction of the other. The electrical charge from the discs was collected by combs and stored in accumulators (Leyden jars, capacitors).

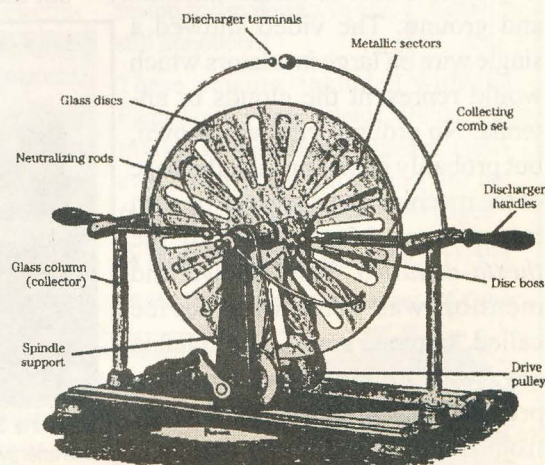

The Wimhurst machine had little use except for scientific research and electro-therapeutic medical applications. Figure 1 shows a basic Wimhurst machine.

Thesta-distatica Design Features

The Swiss *thesta-distatica* is a modified *Wimhurst* device or a condenser machine built by Paul Baumann at the spiritual community Merthernitha in Linden, Switzerland.

Figure 1.

Basic Wimhurst Influence Machine uses counter rotating discs to create an electrical charge which is collected by metal combs and stored in capacitors.

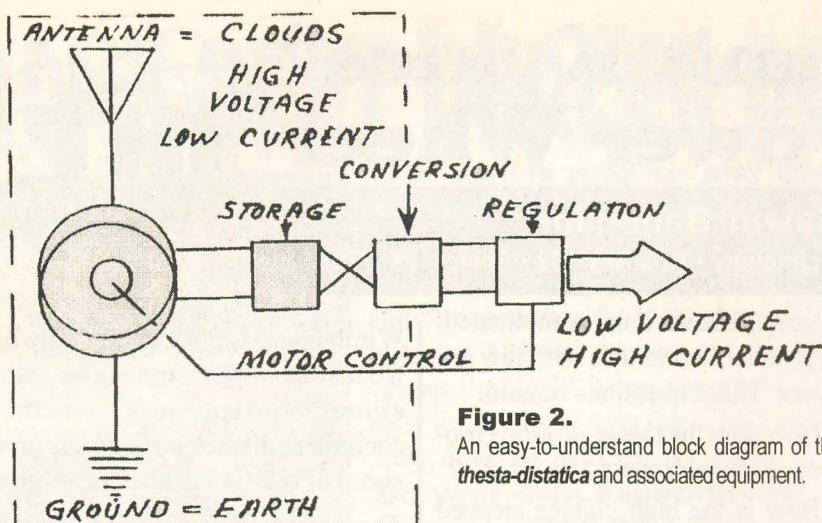

Figure 2.
An easy-to-understand block diagram of the *thesta-distatica* and associated equipment.

The inventor Paul Baumann was a skilled clockmaker and watchmaker before he became a resident of the Merthernitha Community. Paul Baumann built the first *thesta-distatica* with primitive materials while he was in prison.

To understand the operating principle of this wonder machine we must use *The Testatka Energy Machine of Merthernitha* videotape (available from Nu Energy Horizons, PO Box 22, Rumney, NJ 03266) as a reference and evaluate what was presented. The Merthernitha Community was secretive about their invention and obviously did not reveal all to the viewer. The video narrator made an interesting statement...

one disc represents the clouds and the other represents the earth.

In simple terms it meant antenna and ground. The video showed a single wire on large insulators which would represent the clouds or antenna. No ground wire was shown, but probably came through the base of the machine and could not be seen in a picture. Many views of the *thesta-distatica* were shown and mention was made of a device called "antenna keys". The antenna keys was simply a means of impressing the electrostatic energy from the air onto the rotating disc.

This would enhance the total output of the *thesta-distatica*. The principle is similar to Tesla's radiant energy collector, but with rotating discs that also produce energy from counter rotation.

Key points to consider when one is studying the wonder machine *thesta-distatica*:

- Merthernitha was a spiritual community and did not have viewpoints common to most outsiders. To "thoroughly understand" the wonder machine and the people who designed it, we must have the same beliefs lifestyle and values as they did or we must understand their way of living.

Remember the author used the words, "thoroughly understand." Many people do understand some things about the wonder machine but they do not understand every-

thing nor does the author claim to.

- Paul Baumann was not educated in the schools of modern chemistry, physics, electronics and math. Paul Baumann studied nature, heaven and earth and had a deep faith in a creator God who he believed could give supernatural wisdom to chosen ones. He claimed to have had visitations from supernatural entities (angels?). Paul Baumann was a skilled clockmaker and watchmaker. As most people know a timepiece (watch or clock) requires perfect speed regulation for accurate time whether it be electrical, electronic or mechanical. The Swiss frequency standard for electrical devices is 50 cycles and it has been stated that the *thesta-distatica* rotated at 50 rpm.
- Much has been written about *thesta-distatica* and one can be easily confused, but if you pay attention the facts can be sorted out.

A block diagram of the *thesta-distatica* and associated equipment is shown in Figure 2.

Power Wheel Design Features

The *Power Wheel* demonstrated at the *Exotic Research Conference* (Mesa, AZ • July 1998) was **not** a Wimhurst type machine. The *power wheel* electrical system was based on a 3 volt input to drive the small motor and the dual high-voltage modules. Eight liquid capture capacitors

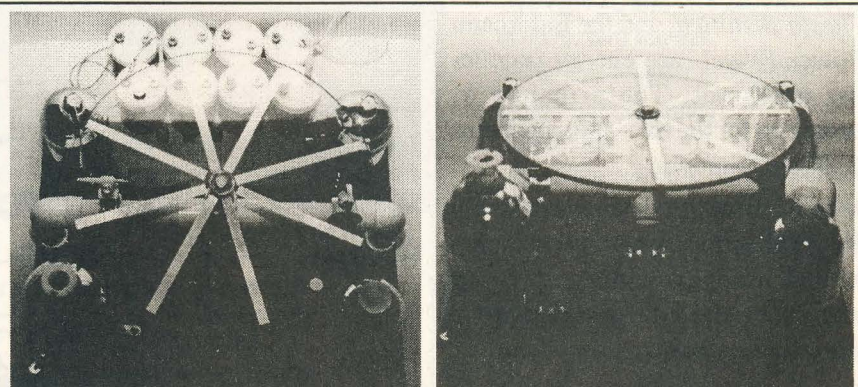

Figure 3. Bahlmann Power Wheel... embodies the principles developed in the famous Swiss free energy device. It was first demonstrated at the 1998 *Exotic Research Conference* (Mesa, AZ).

At this time, we are planning to attend the July **1999 Exotic Research Conference** in Mesa, Arizona. At that time we hope to be able to go into more detail on the unique characteristics of c-caps. **CB**

The Spring Atom

A New Atomic Theory Illustrated by Magnets

By Larry Spring

225 Redwood Drive • Fort Bragg, CA 95437
(707) 964-4700 • (707) 964-2116

My Basic Discovery

About April 1, 1989 I, Larry Spring, postulated that a proton and an electron could *weld together by unlike charged particle attraction*, and become a neutron. About six months later I read in a physics book by Isaac Asimov that a neutron has a half-life of 17 minutes, and when it separates, it becomes a proton and an electron. It would then be a hydrogen atom. My original idea of welding together was downgraded to simply attaching to each other. Isaac Asimov's chart simply added strength to my original postulation, plus the ability to separate again.

With this understanding of the neutron, and my analysis that the proton part of the neutron would pull to-

ward the center of the nucleus of protons due to its strong *gravitational* attraction, and the electron would stick outward due to its extremely light weight. I postulated that *the neutron would be a barrier keeping the rest of the electrons away from the nucleus*.

I have never read or heard this stated by any one else. I appear to be the first person to recognize this atom configuration, and published it in my book entitled *Now I See*, copyright 1990, by Larry Spring.

Shortcomings... of the Bohr Atom

This neutron barrier around the nucleus of the atom gives the *Larry Spring Atom* flexibility not otherwise possible. The *Niels Bohr Atom*

used fixed electron orbits and the laws of mass and motion—similar to the planets around the sun—to keep the electrons from being drawn to the nucleus of protons, which would thereby collapse the atom. Without recognizing the neutron barrier, Niels Bohr had no other alternative. He had to orbit the electrons to make his model of the atom operate.

Several other actions within the *Bohr Atom* do not fit my observations of the way things work. I recognize no force that could drive electrons at an exact speed or in a circular orbit around the atom nucleus. Any increase in electron speed would spiral the electron away from the nucleus, while a reduced speed would cause it to spiral inward. Changing speed of an orbiting electron, when it jumped from one orbit to another, would be essential for the Bohr atom to function. This speed change of the electron does not fit logic. Also, jumping from one fixed orbit to another and nowhere in between is difficult to imagine.

A Bohr atom can not voluntarily expand or contract, so *heat* is described as *momentum of the atom*, and expansion of a container is due to this momentum, leaving space between the moving atoms. These heat-driven atoms can be visualized only by a person lacking the true understanding of *heat*.

Heat is a range of electromagnetic energy called infrared. Radiated

Common Sense Physics

By Larry Spring

Common Sense Physics is the result of 50+ years of experimentation and observations of radio waves. Larry's straightforward analysis is supported by personal observations and experiments—experiments easily reproducible by others. He establishes the concept of the magnetic sphere with his early experiments. Electromagnetism is neither waves nor particle. Larry Spring boldly examines the laws of physics, energy in space, magnets, monopoles and describes his atomic theory in detail. Later heat and its properties as an electromagnetic phenomena is examined. Logical physics, lines of force, and gravity are discussed. Concept of the eye's retina as an antenna array introduced.

Atom

Molecule

The Spring Atom Ceramic Disk Magnet Demonstration illustrates the neutron barrier action with disk magnets riding on a pane of glass set in a frame.

electromagnetic energy is really spherical magnetic fields driven from a conductor that is carrying an alternating electrical current. These free-flying radiated magnetic fields drive electrons one direction or the other in every conductor or insulator that cuts their magnetic lines of force. The direction they drive the electrons depends on the polarity orientation of the radiated magnetic field. Electrons in an insulator are excited but do not move from atom to atom. This observation by Larry Spring can readily be recognized when one understands how television antenna transmission and reception work.

These high speed passing magnetic fields *cannot* drive a neutral atom into motion. Heat *cannot* drive a neutral atom. But heat **can**, and does, drive the electrons within the atom into a back and forth motion, causing the atom itself to expand. An atom in air would expand, and rise seeking equilibrium, depending on its weight in relation to its expanded volume.

Heat is pure energy—a moving magnetic field. Heat adds no weight, only expanded volume due to added electron activity within the atom. Electron activity within the atoms of a conductor can also be caused by an electrical current driven by any electromotive force. Electrons in a

string of insulator atoms can only be activated by moving magnetic fields passing across that string of atoms.

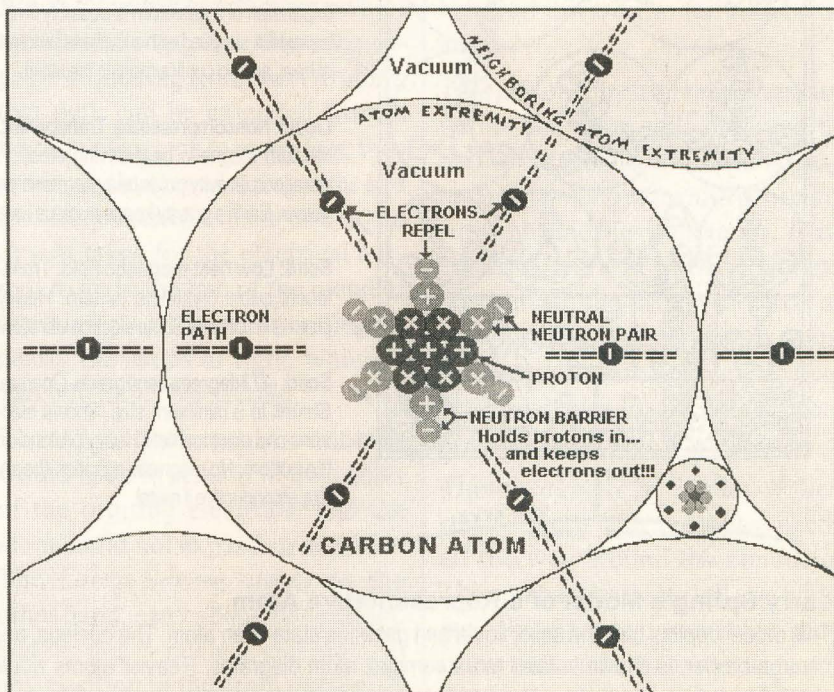

It takes about 10 billion atoms in a row to make a resonant length for the electrical current running back and forth in an 8 ft long antenna element which is transmitting a TV Channel 3 signal. Scaling this figure down to the resonant radiator of white light, it would take one thousand atoms in a row... and in order to radiate, the electrical current would have to double back on its own path. Electrons jumping from one DC orbit to another, as in the

Bohr atom, *does not fit reality* as taught to me by the energy itself.

The Spring Atom Ceramic Disk Magnet Demonstration

This neutron barrier action I can readily demonstrate with disk magnets riding on a pane of glass set in a frame. The pane of glass is covered with tiny glass orbs like in the reflecting paint used for the center line of highways. The tiny glass orbs act as a dry lubricant that cuts friction almost to zero. The magnets are riding on the spherical glass beads which reduce friction to almost zero. Any movement of the disk magnets on the glass is very lively.

This is a Larry Spring experiment (consisting of various self-arrangements of ceramic disk magnets on glass window pane in a wood frame) to learn more about the proton, neutron, and electron orientation in an atom or molecule. Magnetic fields have been substituted for the electrical fields. Individual magnets have been turned upside down to use the magnetic field of attraction to simulate the gravitational pull very heavy protons have on each other.

Enlarged view of the Spring Atom... note the the neutron barrier.

A north side, south side pair of magnets simulates the neutron which, in an atom, is really just a proton and an electron held together by the electrical field of attraction. N in the diagram indicates the north pole of the magnets. The available magnetic (heat) energy determines the activity space. Gravity holds exceedingly heavy protons and neutrons together. The negative electron half of the neutron is very light, so it remains on the outside of the nucleus,

and repels other negative electrons.

A neutron barrier is composed of a neutral combination of a proton and an electron, with the very heavy proton end pulled inward toward the nucleus of heavy protons by mutual gravity, while the very light electron end protrudes outward, and repels the rest of the negatively charged electrons. The electrical fields of the protons and electrons in the atom overlap and cancel... leaving only gravity as a binding force. Gravity

is accumulative. It cannot be canceled. The whole atom is electrically neutral.

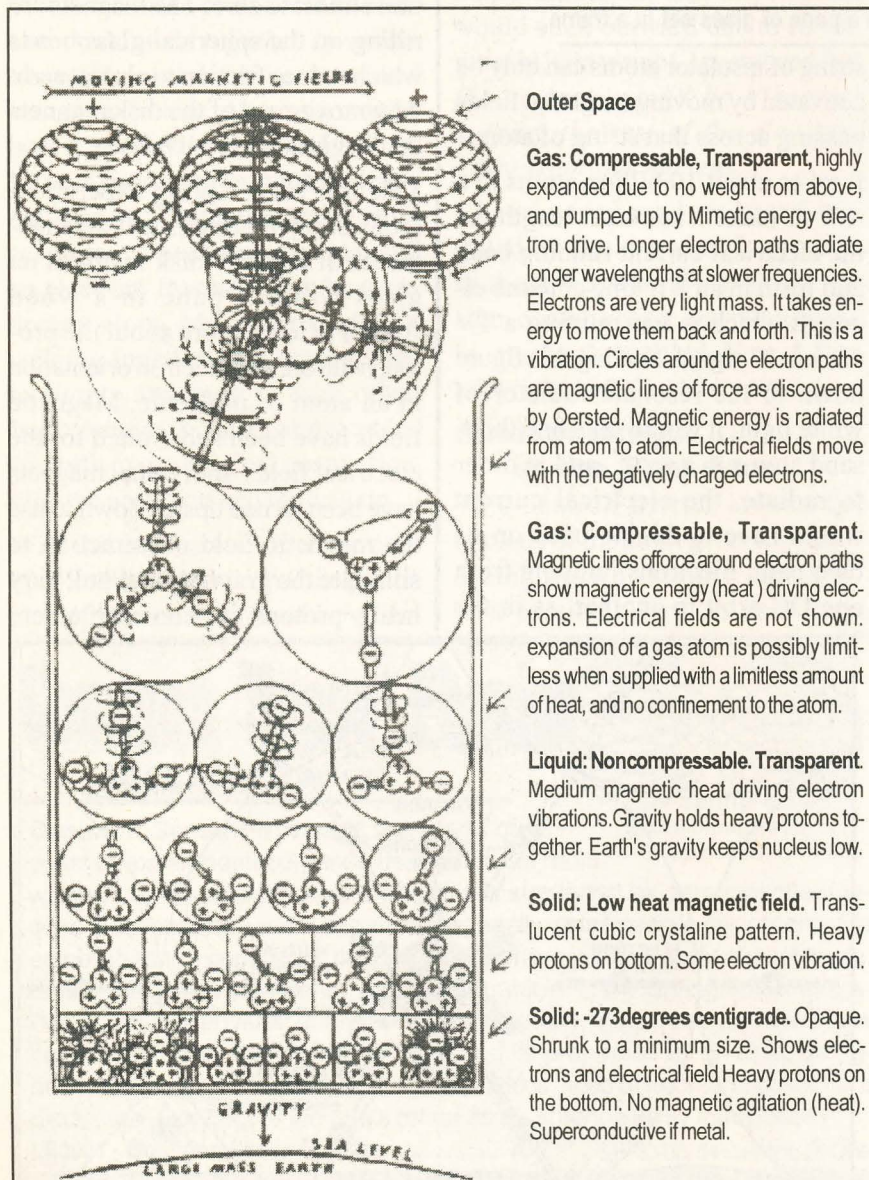

Electron field repulsion leaves a vacuum interior space within the atom in which the electrons can move freely, governed only by the electrical fields and the passing magnetic fields.

Spring Atom Expansion

Robert Boyle, in the year 1675, arrived at some very valid figures relative to the expansion of gases. He recognized heat as motion of the atom itself, which was the smallest known particle of mass at that time. It was over 200 years later that the positive proton and negative electron was discovered. It was too early in the history of physics for Robert Boyle to see the whole picture, and even today there are many of the pieces of the puzzle to be discovered. We now know that magnetic fields drive positive protons one way and negative electrons the opposite way.

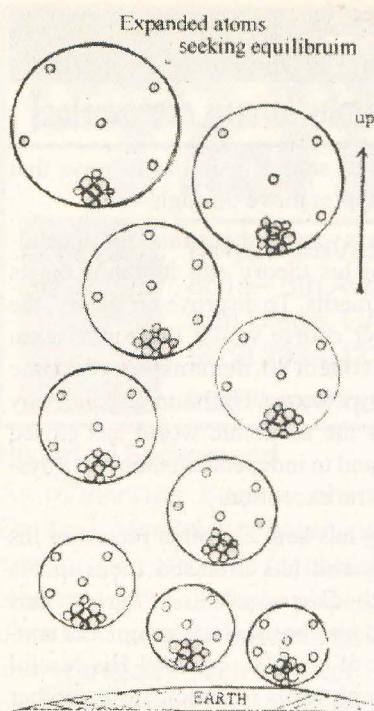

Heat would cause the atom to expand, and with excess heat, the atom would expand beyond its ability to control its parts. Heat expansion of the individual atom is not found in physics books that I have read to date, January 29, 1993. Expansion of the atom is not feasible until the *neutron barrier* protecting the nucleus is recognized, as it was by me, Larry Spring, on April 1, 1989.

The interior of the atom is mostly vacuum space, with a few very tiny light particles of mass with a negative charge called electrons, floating in space within the atom, and repelled from each other, because electrically like charged particles repel. The nucleus is a clump of spherical protons and neutrons held together by gravitational attraction toward each other. The positive protons would fly away from each other

Larry Spring's Model of a Representative Atom...

This model depicts only the solid, liquid and gaseous state of an atom. The nucleus, and neutron barrier, is shown in later more complex atom diagrams. Heavier atoms would simply have more protons, neutrons and electrons.

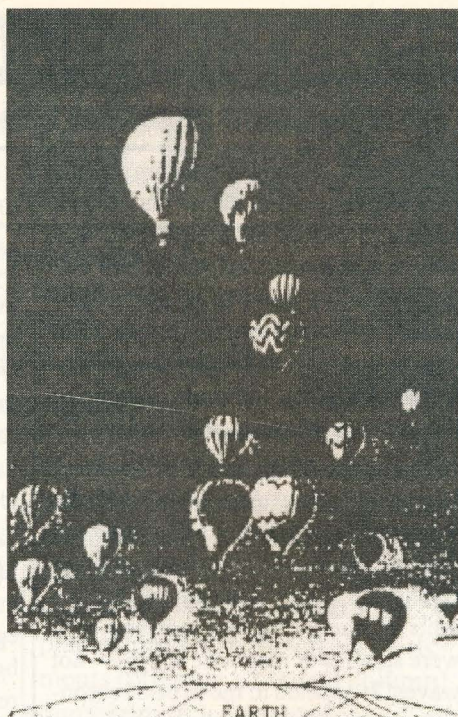

The *Larry Spring atom* can expand or contract, and the heavy nucleus can move to any position in the atom that existing forces dictate. When expanded and rising in the atmosphere, an atom could look like a hot air balloon, with its gondola at or near the bottom of the atom.

due to the repulsion of electrically like charged particles, but they can not overcome the gravitational attraction of the heavy protons and neutrons, each of which is 1840 times as heavy as one electron.

Furthermore the negative charge of the electrons cancels the positive charge of the protons, so the whole atom is neutral. Gravity of the atom has not changed, and passing radiating magnetic fields, such as heat, light and TV signal, only activate the electron motion within the atom into a back and forth movement. Increased electron movement causes expansion of the atom without adding weight. This causes the heated atom in air to rise seeking equilibrium.

The electrons within the atom are driven sideways, 90 degrees to the direction of travel of the passing magnetic field which way (left or right, up or down) the electrons move is determined by the polarity or orientation of the passing mag-

netic field. When an electron in an atom moves, it forms a magnetic field around its path, and drives off (radiates) that field when the electron returns on the same path. This is an alternating electrical current within the atom.

When there is a conducting path of metal containing free electrons capable of moving from atom to atom, that path can be extended from a fraction of an inch to many feet, thus producing long conducting paths and low frequencies. This is due to the time it takes for the electrical current to go to the end of the metallic conductor and back, traveling at nearly the speed of light, which is 186,000 miles per second.

The *Niels Bohr atom's* nucleus would have to remain in the center of the orbiting electrons, and the atom could not expand or contract. The *Larry Spring atom*, on the other hand, can expand or contract, and the heavy nucleus can move to any position in the atom that exist-

ing forces dictate. When expanded and rising in the atmosphere, an atom could look like a hot air balloon, with its gondola at or near the bottom of the atom.

The atom would know which way is up, and trees using these atoms could tell how to grow upward. In plants growing on a slowly spinning horizontal disk, centrifugal force would move the nucleus outward, and the plant would grow toward the center. If Earth's gravity, and the centrifugal force of the horizontal spinning disk were equal, the plant would grow at a 45 degree angle toward the center of the disk. This demonstration I saw at the San Francisco Exploratorium a couple years ago, about 1992.

Spring Atom Orientation of the Nucleus & Electrons

The *Larry Spring atom* also allows for easy orientation of the nucleus and electrons spaced within the vacuum interior of the atom. When an electromotive force drives electrons into one end of a conductor, the protons within the atoms will be attracted toward the source of the electrons, while the electrons will be repelled toward the far side of the atoms.

This proton, electron rearrangement within the atom will organize the normally random, undetectable magnetic field of the atom into concentric rings around the conductor. If the electrical current in the conductor is reversed, the proton electron arrangement in the conductor atoms is reversed, and the concentric magnetic field lines around the conductor are also reversed.

These *magnetic field lines of force* can be traced with a compass needle all the way around the conductor. The compass will also tell you which way the electrical current is moving in the conducting wire as per the *Right Hand Rule*. LS

Over the past 40 years, Larry Spring has been on a lonely quest to determine the nature of electromagnet energy. A diligent and logical thinker, Mr. Spring decided to determine the characteristics of the energy through experimentation. Throughout the course of his research, Larry devised experiments that demonstrate many of the basic tenets of electromagnetics... polarization, duality, verification of the speed of light, reflection, refraction and more! Had he lived in the last century, his work in basic physics alone would have been considered tremendous breakthroughs... Nobel prize material!

About Larry Spring

An independent researcher with revolutionary discoveries!

Larry soon learned that energy has a natural progression in the way that it reveals its secrets. Each experiment will answer some questions, but in turn will uncover a few more to be answered - usually with another experiment. Thus it is only natural that Larry found himself retracing the footsteps of some of the greatest scientists of all times!

Allowing the energy to be his "teacher," Larry soon came to a point in which he was at odds with today's conventional wisdom. Through close observation of reflections, Larry determined that the units of energy he was working with were spheres of magnetic energy—not waves! It appears to me to be a reasonable concept. In the ocean, waves are composed of a large number of water molecules traveling together. Why couldn't what appears to be an electromagnetic wave be composed of a large number of spheres traveling outward

from its source... similar to ways that the ripples move through water.

Larry's work demonstrates the feasibility of his theory and it stands on its own merits. To disprove his theory, the proper course would be to devise an experiment to demonstrate that the theory is wrong. Unfortunately, in many cases the academic world has closed its mind to independent thought. Physics is no exception.

Larry has kept a written record of his ideas and has released them in his book—*Common Sense Physics*. This could well be the electromagnetics textbook of the 21st century! His careful research tends to anticipate a number of questions raised. Larry's efforts proves beyond a shadow of a doubt that one doesn't need a degree to be a scientist. To the contrary, Larry's work epitomizes experimental science... and the scientific method SRE

Supercharge.... Your Engine with... The NELTRON Turbo Battery!!!

Distributors Wanted!

10 reasons to replace.. your BATTERY with the NELTRON TURBO BATTERY!

- SuperCharges engine horsepower
- Dramatically boosts engine TORQUE
- Extends engine and transmission life

The Basis for the Quantum Disk FVY

Historical Background

As pioneering Russian chemist Dmitry I. Mendeleyev began initial construction of a table for chemical elements in the 1860s, he placed the elements into eight different groups and segregated each element into one of the groups due to its specific physical characteristics and properties. This table is still utilized today in all chemistry textbooks.

During Mendeleyev's lifetime several new elements were found in nature such as *Gallium*, *Scandium*, and *Germanium*. Their chemical behavior and properties exactly matched characteristics predicted by his simple yet effective square/rectangle periodic chemical table.

Mendeleyev did not place any of the elements into a group according to electrons because the theory of

electrons and quantum mechanics had not been postulated when he completed his chemistry chart. Mendeleyev created an important foundation—each element must be placed into a specific group of elements (utilizing a vertical column) numbering from one to eight.

Mendeleyev's founding principle of placing an element in a proper vertical group was forgotten by a majority of the standard chemistry community when the *Quantum/Electron Theory* (QET) was introduced by several prominent theoretical chemists and physicists beginning in the 1920s.

The very complex mathematics of the *Quantum/Electron Theory* resulted in the splitting of the chemical table at elements 20 and 21 and splitting the table again at element

57 that resulted in a group of elements called the *Lanthanides* being separated from the main block of elements. The *Quantum/Electron Theory* also resulted in the separation of another group of elements called the *Actinides* from the main block. Again, Mendeleyev's founding principle of placing elements on the chemical table was ignored.

In the 1920s and 30s, experiments with the element of *Uranium* resulted in the discovery of additional elements that were placed on the chemical chart with the *Actinide* group. The elements of *Promethium* and *Technicium* were also discovered by the experiments with *Uranium* but placed in the main table. *Technicium*, *Promethium* and *Uranium* have a similar relationship as *Zirconium* and *Hafnium* - a symbiotic relationship where both have very similar structures and can only be found in combination throughout nature. However, other elements discovered by experimenting with *Uranium*, such as *Plutonium*, do not exist on Earth or probably anywhere else in this dimension.

All of the elements beyond *Uranium* are known as *transitional elements* and most of them exist in this dimension due to synthetic nuclear reactions created by humans. Some of the *trans-uranium* elements are found in nature but as the Earth formed, *Uranium* was created first and then cosmic forces transmuted

Figure 1. Standard Table of Elements. First developed by Mendeleyev in the 1860s, later modified according to principles of Quantum/Electron Theory.

The Harmonic Sphere of the Chemical Elements

Discovered by Brian David Andersen. This new spherical chart of the elements could supplant the century old Standard Table of Elements first developed by Mendeleev in the 1860s, later modified according to principles of Quantum/Electron Theory. The acceptance of a spherical chart would lead to a new understanding of chemistry and chemical reactions... and a rejection of the current Quantum/Electron Theory.

the Uranium into a synthetic transition element. Nature does not create elements beyond Uranium, but cosmic forces and human nuclear reactions transmute Uranium into the *transition* elements. If Nature created an element beyond Uranium, then the elements found in nature beyond Uranium would not be called *transition* or *trans-uranium* elements.

The Rhythm Of Nature

When seeking the keys to the chemical table, the emphasis must be on what were the influences during the formation of the Earth, and later, when the Earth reached the point in its evolution where basic forms of life could be supported. A fundamen-

tal rhythm must have existed during the formation of the universe, galaxies, solar systems, suns and planets and then, as the Earth evolved, there were variations of the basic theme that created and sustained our planets. When basic keys to the *Rhythms Of Nature* are discovered, science and humanity can harness this important fabric of our existence.

During the past 50 years the traditional science and chemistry communities have ignored the basic principle established by Mendeleev, have embraced the *Quantum/Electron Theory* that is now being questioned by many persons and have included the

transitional elements that do not exist in nature into the chemical chart. All of these steps have created a complicated and arbitrary chemical chart that does not attempt to track or plot the *Rhythms Of Nature* but is an extension of human intellectual exercises with mathematics that have no connection with the reality of the Universe.

The book *There Are No Electrons* by Kenn Amdahl presents an excellent challenge to and a debunking of the *Quantum/ Electron Theory (QET)*. For example, Amdahl points out that the *QET* states particles with the same charge are the components of the nucleus of an atom. But how can two particles with a

same charge not repel away from each other, thus destroying the nucleus? So to cover this hole in the *QET*, physicists and chemists licked their pencils and mathematically created a particle called a *gluon* that holds together the particles with the same charge in a nucleus.

Does nature know and utilize the complicated mathematics related to the *QET* to manifest matter in this dimension? Probably not. However, the geometry of a sphere provides a simple, efficient way of manifesting matter in this dimension but the *QET* excludes basic or advanced geometry of a sphere.

Today, traditionally trained scientists are trying to discover room temperature superconductors, gravity, energy devices, levitation and other secrets, but is the road map—the chemical chart—to finding breakthroughs in these areas proper and correct? Probably not. So scientists could continue to scratch their heads for answers to countless questions for generations because they do not have the appropriate, critical and fundamental tool.

QET is a blinding albatross around the vision and outlook of traditional scientists. One must go out on a limb or, better yet, place themselves in a sphere to get a breath of fresh air and a dose of reality.

Inappropriate Association

For the past 60 years there has been an extremely inappropriate association made between technology and the *Quantum/Electron Theory*. For example, the technology of television utilizes a beam of particles, light or energy that is directed at material to produce visual images. What are the particles, light or energies produced by the technology of television? The traditional scientific community assumes or theorizes that the particles are “electrons” but they have no proof whatsoever that

the energies in a television set are electrons. They are merely guessing at what is the foundation for the technology known as television.

QET provides a comfort zone for the scientific community and the general public when trying to relate to television and other technologies such as *Magnetic Resonant Imaging* (MRI), *Positron Emission Tomography* (PET) and electrical superconduction. All of these technologies and other related areas have been inappropriately associated with electrons. *QET* bestows the scientific community a means of communicating some sort of explanation to the general public without having to make the truthful and painful statements, “we don’t know” or “I haven’t got a clue.”

QET perpetuates the myth that scientists have some sort of authority over, control of and handle on the massive technologies developed over the past 60 years. If the general public were aware of the quicksand foundation (*QET*) for traditional science, they would re-evaluate the purpose of “modern technology.”

Back To The Basics

What is the structure of the chemical chart when the *Lanthanides* and *Actinides* are placed according to Mendeleyev's founding principle—that each element belongs in a

proper vertical group?

All *Lanthanide* and *Actinide* elements do belong in correct proper vertical groups. When these elements are put into the accurate vertical group, three blank squares appear between *Promethium* and *Samarium* and one blank square appears between *Erbium* and *Thulium*. I call these holes in the chart... **the big silent fudge factor.**

In this chemical table, all of the *Lanthanide* and *Actinide* elements have been placed in proper vertical groups. If the reader disagrees with this placement, please provide the author an analysis of each *Lanthanide* and *Actinide* element and why they believe the particular element does or does not belong in the specific vertical group illustrated here. The author will not accept any responses that are based upon the complicated and arbitrary *QET*.

The traditional science community states there are 92 basic elements, but are they incorrect?... are there 96 basic elements? Do the four extra elements only exist on the outer planets of our solar system?

Archimedes discovered the basic value of π (3.14) with a 96-sided polygon. The number 92 does not divide into 360 degrees (circumference of a circle) with an even precise number, but only with a long fraction. The 96 elements drop pre-

cisely on a sphere every 3.75 degrees... and that that is why Archimedes discovered the value of Pi with a 96-sided polygon.

All animals have 48 chromosomes. Each chromosome is composed of a double helix DNA strand for a total of 96 fibers of genetic material. But humans have 46 chromosomes. This may be why our species lack, or is free from, the binding tool of animal "instinct" that is dominated and guided by the number 96.

Do solar systems, galaxies, and universes function in a random chaos manner related to the number 92?... or, do the multi-dimensions operate on the logical order related to the number 96?

Circumstantial Evidence

Does any kind of circumstantial evidence exist indicating the chemical table has 96 basic elements?

Between 1898 and 1932, while in deep states of transcendental meditation, Annie Besant and Charles Leadbeater made detailed analysis and drawings of most of the chemical elements that were published in their book *Occult Chemistry* in 1938. Countless elements were discovered and formally documented by Besant and Leadbeater years before the traditional science community formally recognized those elements. Besant and Leadbeater were founding members of the *Theosophical Society*.

Leadbeater and Besant observed and detailed 100 objects or elements, four of which have since been identified as isotopes. They did observe four elements occurring in the *Lanthanide* group (elements 57 *Lanthanide* thru 71- *Lutetium*), however, for a total of 96 basic elements - not the 92 stated on the traditional chemistry chart. They named these four "extra" elements *X*, *Y*, *Z* and *Kalon*.

Leadbeater and Besant began their observations at the basic or visual level of the element and their investigations took them to 10 levels of molecular particles - they did not observe any particles described in *QET* such as protons, neutrons, electrons and atoms. The first configuration they observed was named the *Micro PSI Atom* and they detected seven different types of *Micro PSI Atoms* - Spike, DumbBell, Tetrahedron, Cube, Octahedron, Bars and Stars (Figure 3).

At the 10th and final level they discovered a common particle in all elements and they named these bits of matter the *Ultimate Physical Atom* or *UPA* (figure 4).

The only difference between all elements at the 10th level is the number of UPAs. They also named this particle a *chiral*. Each element has a right or left spin UPA but the element of *Oxygen* is the only element that has a UPA or chiral that can spin right or left. *Hydrogen* has 18 UPAs and *Uranium* more than 3,000. The four extra elements also have specific and unique numbers

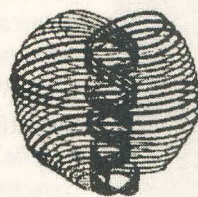

and UPAs. Also, while observing the chemical elements in meditation, they gleaned the correct atomic weight and other characteristics of many elements some 30 years before the elements were discovered by the traditional science community.

Stephen Phillips, a traditional physicist from England, completed an analysis of Leadbeater and Besant's efforts and published his opinions and findings in a book titled *Extra-Sensory Perception of Quarks*. In his book, Phillips totally disregards elements *X*, *Y*, *Z* and *Kalon* and refers to them as "hybrid elements" that are "mathematically impossible" but he did not detail the mathematics he used to prove that these "hybrid elements" are "impossible" (*QET* is probably the basis).

As far as I can determine, I am the first person to place the four extra elements into their proper position according to their UPA numbers. Elements *X*, *Y*, and *Z* fit between the

Ultimate Physical Atom - UPA

POSITIVE / RIGHT
(MALE)

NEGATIVE / LEFT
(FEMALE)

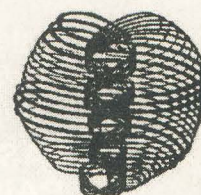

Figure 4. Each element has a specific number of UPAs.

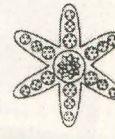

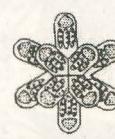

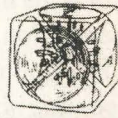

elements *Promethium* and *Samarium* and *Kalon* slots in between *Erbium* and *Thulium*. These four "extra" elements fit exactly in to the holes discovered in the *Big Silent Fudge Factor*. I renamed the elements *X*, *Y*, and *Z* but kept the name *Kalon* for the fourth element. The new names are:

- X - Besanton** - element number 62
chemical symbol - *Bt*
- Y - Leadbeaterin** - element number 63
chemical symbol - *Lb*
- Z - Andersenium** - element number 64
chemical symbol - *Ad*
- Kalon** - element number 73
chemical symbol - *Ka*

These names, numbers and symbols are utilized in the new tables of the chemical elements detailed in this

Holes in Heaven?

A Documentary
Video on
HAARP

\$29.95
+S/H

Holes in Heaven investigates the High Frequency Active Auroral Research Program (HAARP). This experimentation is being conducted by our government and top scientists are concerned about the possibly drastic effects on Earth. Video features pro and con interviews and demonstrates how we are all interconnected as electromagnetic beings. Directed by Emmy winner Wendy Robbins. Martin Sheen narrates. (53 min.)

Send check or money order to:

Holes in Heaven?

PO Box 91655

Pasadena, CA 91109-1665

article. Again, the circumstantial evidence for the existence of 96 basic chemical elements are:

- Four holes appear in the square/rectangle chemical chart when the *Lanthanide* and *Actinide* elements are placed into the proper vertical groups.
- Besant and Leadbeater observed four elements that fit exactly into holes of the corrected square/rectangle chemical table.
- Archimedes utilized a 96-sided polygon to determine the basic value of Pi (3.14).
- The number 96 evenly divides into a 360 degree sphere (every 3.75 degrees)... the number 92 does not.

Do the elements *Bt*, *Lb*, and *Ad* also have a symbiotic relationship with *U* and would these elements be found in a natural and non-symbiotic form on the outer gaseous plants of our solar system? Are man made elements such as *Plutonium* derivatives of *U* or are they derivatives of *Pm*, *Bt*, *Lb* and *Ad* that have a symbiotic relationship with *U*?

Blurred Vision?

However, when utilizing the square/rectangle table with either the Mendeleyev method or the *QET*, the differences in the elements—especially in the transition metals—become blurred as the atomic number goes up. But is this blurring due to the elements or is the blurring due to the human perception of the elements via an inferior method of observing, illustrating and tracking the elements?

Does nature allow blurring of the chemical elements? Could Earth, a sun, solar system, or galaxy exist if nature blurred the chemical elements? Probably not.

All the most eloquent debates by the brightest minds will not change the blurred, inferior aspects and inherent/built-in problems of the square/rectangle chemical table. The Mendeleyev square/rectangle table of the chemical elements, with or without the *QET*, provided humans

an introduction to the world of chemistry but does our species need to graduate from the introduction phase of chemistry into a more accurate, precise and definitive chart for the chemical elements? *Definitely Yes!*

For the past 100 years physicists from Plank, Rutherford, Bohr to Hawking have tinkered with complicated mathematics for insights into the secrets of our fabric. Now our species needs to evolve away from the complex mental tinkering and move on to a simpler, more mature observation and utilization of our reality. The simplistic yet logical geometry related to a sphere provides a map to the universe, galaxy, solar system, sun, planet, element, molecule or the smallest bit of matter.

Introducing the Harmonic Sphere of the Chemical Elements

Galaxies, solar systems, suns, planets and molecules are spherical and elliptical in shape. Which statement makes more logical sense?

- Galaxies, solar systems, suns, planets and molecules, manifest matter by an unbalanced and non-rhythmical 92 square/rectangle basic elemental table that uses the mathematics of the complicated and arbitrary Quantum Electron Theory yet excludes basic geometry of a sphere and the Alpha and Omega points are not conjunct.
- Galaxies, solar systems, suns, planets and molecules manifest matter by the precise geometric patterns provided by a 96 elemental spherical chemical table that utilizes basic and advanced geometry of the sphere with absolute rhythm and balance and the Alpha and Omega points are conjunct.

Does nature create square-shaped objects? Rarely. Can a square/rectangle fit into a sphere with the same measurements as the sphere? Is there any logical sense in repetitive attempts to fit a square peg into a round hole? The most logical and efficient road map to the chemical

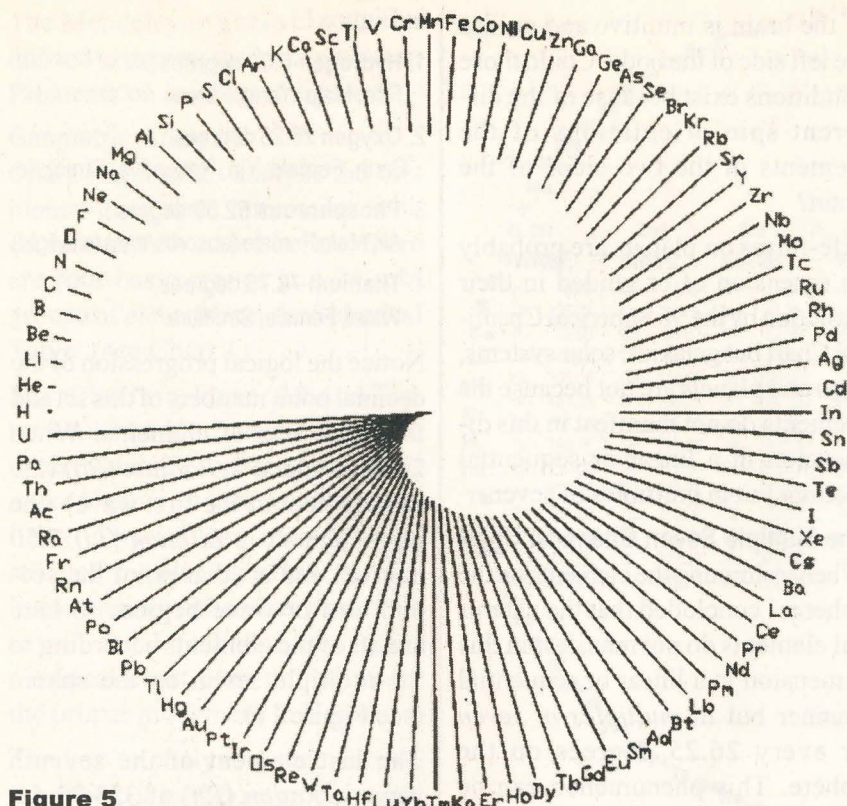

Figure 5

elements is the sphere, or perfectly slot a round peg (spherical chemical table) in a round hole (rhythm and shape of nature) rather than continual attempts to force a square/rectangle peg (traditional chemical table) into a round hole.

The element of *Hydrogen* is placed at the mid horizontal point on the left side of the circle and given a value of 0.00 degrees. All elements have a decimal value of .00, .25, .50 or .75. The square/rectangle table utilizes eight groups but the spherical table utilizes these four basic decimal groups (vertical) with 24

subgroups (horizontal) and also seven waves of elements (see Chart 1 and Figure 11).

Figure 5 gives each element a line value based upon the radius of the sphere. For example a circle with a 4.8 inch radius divided by 96 gives Hydrogen a line value of .05 and the line increases .05 for each sequential element.

However, the .05 line of Hydrogen can also be placed at the center point of the circle rather than the outside circle and then each line is increased by .05. The circle of Figure 5 represents elements in the contraction

form spiraling towards the center point of the circle, but Figure 6 represents elements in the expansion form spiraling towards the edge of the circle. Figure 6 does not have chemical symbols because the lines are too close together.

Figure 5 has the elements moving in a clockwise right hand turn and Figure 6 has the elements moving in a counter-clockwise left-handed movement. But what if Figure 5 also had elements moving in a left-handed turn and Figure 6 had elements moving in a right-handed turn? Nature probably would utilize both left and right to manifest elements and any kind of matter.

It is no coincidence that Figure 7 and Figure 8 have similar shapes of the two most important organs on Earth and probably any planet—the heart and brain. Countless life-forms throughout the universe most likely mimic the linear manifestation of the chemical elements. However, this article can only utilize two dimensions and the heart and brain look even more similar to Figure 7 and Figure 8 in a three dimensional drawing.

But what is the significance of the right-turn and the left-turn for both the illustrations and the heart and brain? Could elements manifested on contracting right turn be different than elements manifested on a contracting left-turn? The left side of the brain is logical and guides the right side of the body, the right side

Steve's Notes ALTERNATIVE ENERGY RESEARCHER'S REFERENCE MANUAL

Magnetic Motors & Generators

Compiled by
Steven R. Elswick, BSEE

The quest for energy has occupied the efforts of the human race ever since Prometheus stole fire from the Gods and gave it to mankind. In 1269AD, Petrus Peregrinus penned the first book on magnetism and drew up the first magnet motor. Over the centuries, interest in magnet motors has fluctuated. This book covers some of the more prominent researchers and their devices in this intriguing field of endeavor. In addition, there is information and plans so you, too, can construct and test your own magnet motors! In cases where patents are available, the patent information is included.

Features:

- Permanent Magnet Motors
- Theory
- Construction Plans
- EV Gray
- Research Overview
- United States Patent
- Joe Newman
- Research Overview
- South African Patent
- Bert Werjefelt
- JE Jines

of the brain is intuitive and guides the left side of the body. Could those conditions exist because of the different spin orientations of the elements in the two sides of the brain?

Life-forms on planets are probably an extension of or guided in their evolution by the 96 Spherical Chemical Chart but galaxies, solar systems, suns and planets are not because the elements do not manifest in this dimension in a linear or sequential manner but in multiples of seven.

The Multiple Seven Chemical Chart
When examining the elements on the sphere, I concluded that the chemical elements do not manifest in this dimension in a linear or sequential manner but in *multiples of seven* or every 26.25 degrees on the sphere. This phenomenon can be logically expressed in the following formula:

$$M = \Omega E \times 7$$

Figure 9

This equation states that the mass of an object equals the logical intersection of energy multiplied by seven.

Let's take a look at how the elements manifest themselves in this dimension. We will look at the first line of the Multiple Seven Chart which also corresponds to the first four elements of the first wave listed

in Figure 11.

1. **Hydrogen** 0.00 degrees
Fire, Male, Yang, Force
2. **Oxygen** 26.25 degrees
Earth, Female, Yin, Receptive, Structure
3. **Phosphorous** 52.50 degree
Air, Male/Female (absorbs/transmits light)
4. **Titanium** 78.75 degrees
Water, Female, Structure

Notice the logical progression of the decimal point numbers of this set and the other sets of elements. When 26.25 is added to *Radium (Ra)* (the last element of the first wave) -the next element is *Lithium (Li)* 7.50 degrees and at that point the second turn or wave begins...so here are all of the elements according to the multiple seven on the sphere (see Figure 11).

The last element of the seventh wave is *Radon (Rn)* at 333.75 degrees. When 26.25 degrees is added to 333.75 degrees the exit point after the last element is 360.00 or at the beginning point of *Hydrogen!!!* The multiple seven elements on the sphere start at *Hydrogen* 0.00, create seven waves of elements and the exit point after the last element is 0.00. The Alpha and Omega points of the *Spherical Table Of The Chemical Elements* are conjunct. This system provides nature a simple and efficient manner of manifesting the 96 elements of our dimension.

Figure 10

Figure 10

The Mendeleyev Table can also be utilized to express the Multiple Seven Elements on a sphere. (Figure 10)

Geometric Analysis

Chart 1 is used to analyze the elements' geometric interaction with each other. As stated before, there are four basic groups and 24 sub-groups of elements on the Spherical Table. (see Chart 1)

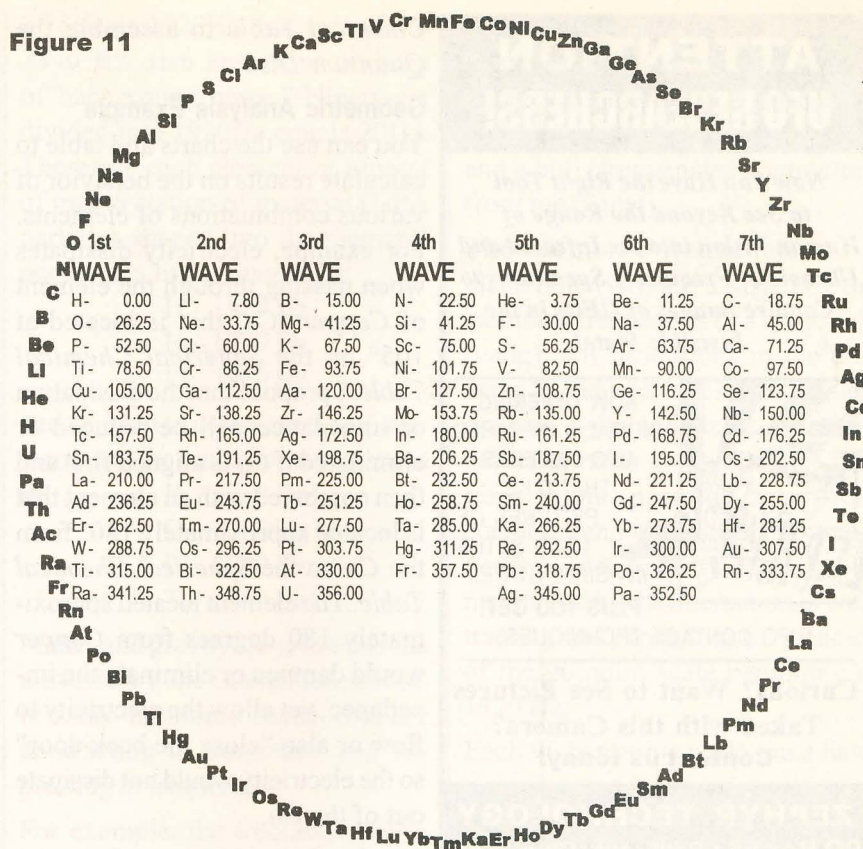

The titles Fire, Earth, Air and Water could be too esoteric for some readers and they are encouraged to make their own charts with other titles. Chart 1 can also be constructed by placing elements in a linear manner rather than a multiple seven, but I feel that any linear chemical chart does not represent the proper movement in Nature.

The key to analyzing elements on the sphere is how does an element's geometric position relate to all the other elements. For example the element *Hydrogen* is 45° from *Aluminum* (H at 0.00° and Al at 45.00°). Each aspect has a specific influence—these aspects can vary by plus or minus seven degrees.

- 30° - neutral
- 45° - dampening, semi-friction
- 60° - flowing, favorable
- 75° - dampening, semi-friction
- 90° - dampening, friction
- 105° - semi-favorable
- 120° - favorable
- 135° - semi favorable
- 150° - dampening, semi- friction
- 180° - friction - dampening yet favorable

Using aspect analysis of the 96 Multiple Seven Chemical Chart on a Sphere, I developed a one- inch plastic disk with various components that change the molecular structure of liquids and solids when coming within six inches of the substance. This item is named the *Quantum Disk FVY* and was demonstrated at the 1998 *Exotic Research Conference*. I cannot divulge how I utilized the *Spherical*

*Chemical Table to assemble the
Quantum Disk.*

Geometric Analysis Example

You can use the charts and table to calculate results on the behavior of various combinations of elements. For example, electricity dissipates when passing through the element of *Copper (Cu)* that is located at 105° on the *Spherical Chemical Table*. I propose that the dissipation or impedance will be reduced or eliminated if *Cu* is aligned first and then combined with an element that is located approximately 180° from the *Cu* on the *Spherical Chemical Table*. The element located approximately 180 degrees from *Copper* would dampen or eliminate the impedance, yet allow the electricity to flow or also "close the back door" so the electricity would not dissipate out of the *Cu*.

I predict that within two to five years an inexpensive *room temperature superconductor* made of *Copper* and *Hafnium (Hf)* (located at 281.25° on the *Spherical Chemical Table*) will be created. However, a third element will be required because of the unique characteristics of *Hf*. Can the reader determine the third element predicted to make a room temperature superconductor according to the *Spherical Chemical Chart*?

The *Multiple Seven Harmonic Element Spherical Chemical Chart* has many potentials for discovering and unlocking countless hidden meanings and applications in nature that can be adapted to a wide range of current and future technologies.

Manifesting Elements

How do the 96 elements manifest in this dimension? Quite obviously nature does not use a square table. Do the smallest and largest components of this dimension, universe and our solar system move, flow and

manifest by utilizing the complicated mathematical formulas composed by traditional physicists and astronomers? Does our Sun know and apply calculus or complex actuations theorized by Stephen Hawking and others? Probably not.

All components of our reality most likely move, flow and manifest in the most primary and efficient manner possible. The most logical, primary and efficient form of manifesting elements in this dimension is the sphere—the shape of our sun and planet. The sun and our planet most likely use the fundamental and basic mathematics of multiple seven harmonics on a sphere to manifest the 96 chemical elements.

There is a symbol that is the foundation for Far Eastern Philosophy for the flow of energy known as "Chi" and that symbol is derived from the *Multiple Seven Harmonic Table Of The Chemical Elements*.

This important Far Eastern symbol is derived by applying the 96 multiple seven element to seven circles with increasing yet equally proportional circumferences. Hydrogen is placed at 0.00° on the left side of mid-horizon point of the first inside circle. Oxygen is placed at 26.25° on the second circle that is proportionally larger than the first circle. Phosphorous is placed on the third sphere at 52.50° .

This pattern of proportional circles and exact geometric points are com-

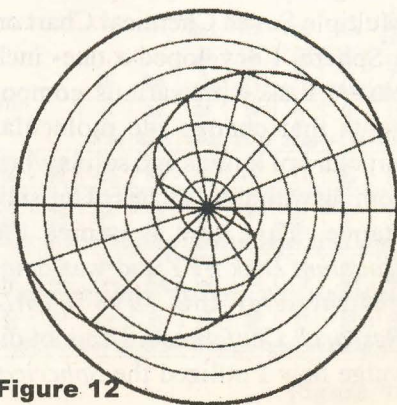

Figure 12

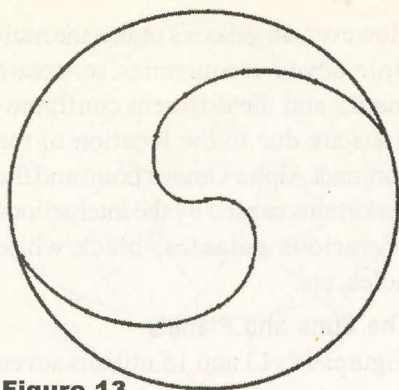

Figure 13

pleted with the *Multiple Seven Table Of The Chemical Elements*. I utilized a computer program called *Auto-Cad* to complete this task and I requested the operator to connect all the elements in the multiple seven form (*H, O, P, Ti, Cu, etc*) with a curved line. However, the operator misunderstood my instructions and our fortunate miscommunication provided a novel discovery. (See Fig 12)

The operator connected the first seven multiple seven elements on each circle with a curved line but then he mirrored those connections in the opposite direction -this graphic is familiar to the West and especially residents in the Far East. **The Yin-Yang symbol comes from the Multiple Seven Chemical Table!**

Do suns and planets utilize variations of the *Multiple Seven Harmonic Table Of The Chemical Elements* to manifest solid matter in this dimension? The evidence indicates a definite *maybe* to that question!!

The *Auto-Cad* operator then followed my complete instructions and Figure 15 is the remarkable result.

Practical Application

What do the 96 points on seven spheres represent related to the cosmos and does this system provide a practical application?

The sum of the 96 points represents a harmonic scale starting at 3.75Hz and each scale begins at a multiple of 3.75Hz. One of the multiples of

3.75Hz is 1920Hz that extends to 3840 HZ also known as an area of "background noise." Ninety-six divided into 1920Hz equals 20Hz. Therefore each element or a point of manifestation of material (UPA particles shaped into the element) occurs in a linear manner at:

H - 1920 Hz

He-1940 Hz

Li- 1960 Hz

and so forth to complete the 96 elements and the multiple seven pattern is:

H - 1920 Hz

O - 2060 Hz

P - 2200 Hz

Ti - 2340 Hz

Matter and gravity are created in the universe by the interaction of two or more harmonic scales that are contracting in frequency and expanding in frequency.

For example, the frequencies of a sun (male, force, yang, hydrogen) in a solar system are expanding while the frequencies that are contracting near the sun will initiate and sustain the formation of a planet (female, receptive, yin, oxygen). The planet will maintain growth as long as the

interacting yin-yang harmonic frequencies in space and time remain balanced. Gravity is a push (frequencies expanding from the Sun) and a pull (frequencies contracting from the planet).

The harmonic frequencies of a black hole (yin) are assisted by the harmonic frequencies of a white hole (yang). All formations in the universe from black holes, white holes, quasars, nebula galaxies, spiraling galaxies, radio galaxies, solar systems, suns, planets, asteroids, comets, compounds, elements, molecules and bits of matter are manifested by the interaction of contracting and expanding frequencies of the 96 point scale beginning at 1920 Hz.

Each 96 harmonic scale must have a conjunct Alpha and an Omega point and that is achieved by following the **Grand Unifying Constant of the Universe**- the mass of an object equals the logical intersection of energy multiplied by seven:

$$M = \Omega E \times 7$$

Figure 14

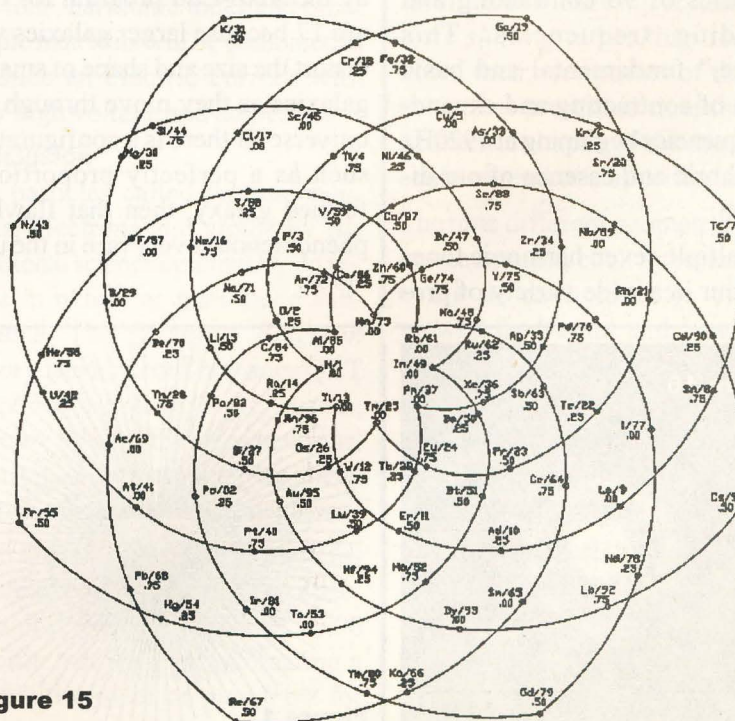

Figure 15

My discovery of the **Grand Unifying Constant of the Universe** was made possible by the efforts of Besant and Leadboater who discovered the critical aspects of many elements while in meditation 30 years before they were formally recognized by the traditional science community. The current generation of scientists snub and ignore Besant and Leadbeater's accomplishments, but hopefully the next generation will be more aware and open. The present day insult to Besant and Leadbeater by the traditional scientific community is a classic illustration of the saying "science advances one funeral at a time."

However, the conjunct Alpha and Omega point does not have to begin at the multiples 3.75Hz but can initiate at any point such as 2440Hz instead of 1920Hz. The variable or moving conjunct Alpha/Omega point results in the variety of galaxies, solar systems, suns and planets.

The frequency range between 1920Hz and 3840Hz has "background noise" but that noise is actually the universe manifesting in harmonics of 96 contracting and expanding trequencles. This "simple," fundamental and basic system of contracting and expanding frequencies beginning at 1920Hz is the fabric and essence of our dimension.

The multiple seven harmonic tones can occur in a wide variety of pro-

portional patterns that create a multitude of different yet fundamentally similar black/white holes, quasars, galaxies, solar systems, suns, planets, molecules and bits of matter throughout the universe.

Most galaxies have 96 harmonic tones in an expanding male - yang pattern (white hole) at the center with contracting female - yin 96 harmonic tones (black hole) on the outer region of the galaxy. The yin/yang harmonic tones shape and move matter flowing through the universe and bind and hold the galaxy together. Combining Figure 7 with Figure 8 gives somewhat of a linear illustration of a typical galaxy but most likely the white hole at the center of a galaxy is much smaller than the proportion detailed in Figure 17.

Figure 16 is a video picture of a galaxy known as U6614 with the Figure 15 superimposed on the top to illustrate how a galaxy utilizes the multiple seven chemical chart to create elements in this dimension. Most galaxies will not have the exact or perfect proportions as drawn by the *Auto-Cad* program for Figure 17 because larger galaxies will distort the size and shape of smaller galaxies as they move through the universe. If there is a configuration such as a perfectly proportional formed galaxy, then that flawless phenomenon is very rare in the universe.

However, all galaxies utilize the multiple seven frequencies to create matter and the different configurations are due to the location of the conjunct Alpha/Omega point and the distortions caused by the interactions of various galaxies, black/white holes, etc.

The Suns and Planets

Figures 12, 13 and 15 utilizes seven concentric circles that are proportionally larger than the initial circle and illustrates how flat flower-like galaxies or solar systems are formed by the harmonic tones being spread out over billions of miles. However, a sun or planet is formed when circles one and seven have the same circumference and circles two and six have the same circumference and circles three and five have the same circumference (see figure 19).

What is also very critical to the formation of a sun and planet is the sub-harmonic tones of the 96 scale that are 48 (96 divided by 2), 144 (96 plus 48), 192 (144 plus 48) and 48 is added to each sub-harmonic scale (see figure 20). The sub-harmonic tones are also the key components of the black and white holes of galaxies.

On the 144 sub-harmonic scale the multiple seven points occur at every 17.5°. 144 divided into 360° equals 2.5° and 2.5° multiplied by seven equals 17.5°. The Alpha and Omega points on the 144 scale are conjunct when applying the **Grand**

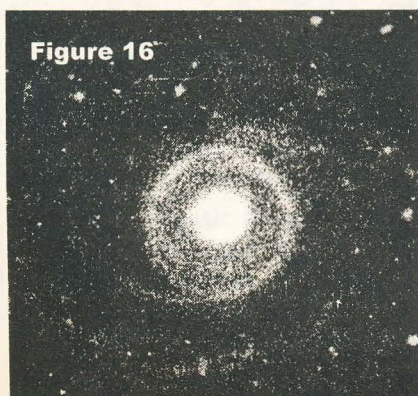

Figure 16

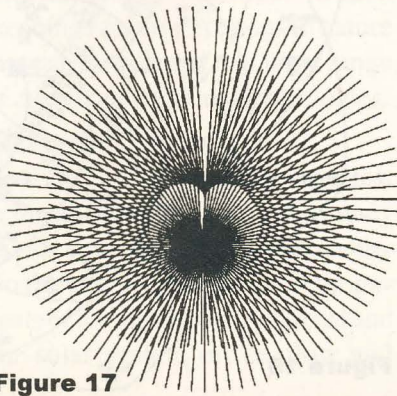

Figure 17

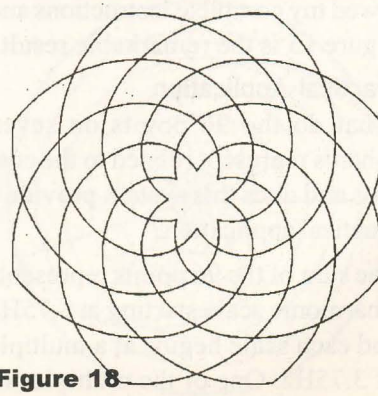

Figure 18

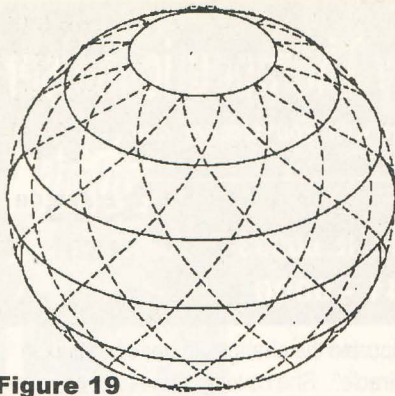

Figure 19

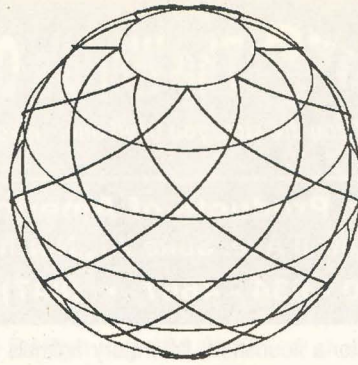

Figure 20

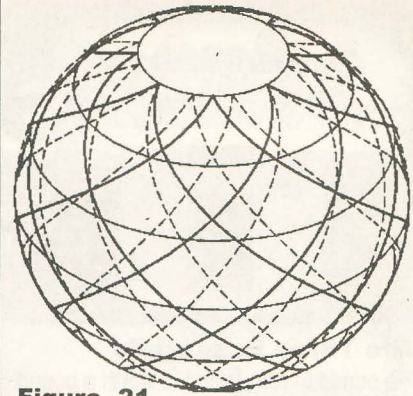

Figure 21

Unifying Constant of the Universe. Figure 21 is a composite of 96 and 144.

Nature's Cold Fusion

The highly concentrated seven waves of the 96 harmonic frequencies coming from a sun (yang/expanding/male/left-turn) creates intense vortexes on a planet (yin/receptive/female/right-turn). When these harmonic vortexes from the sun come in contact with a planet's atmosphere saturated with storm clouds, intense spirals or tornados of negative ions are created.

The lower/upper atmosphere negative ion spirals contain a vast amount of particles traveling faster than the speed of light called *tachyons*. The ion vortexes could also corral free radical ultimate physical atoms (UPAs) that are ejected by organic and inorganic materials on the planet.

As the negative ion vortex begins to collapse, the tachyons and UPAs become very excited and at a critical movement and time these particles collide. These collisions or fusions create pure energy and the entire negative ion vortex transforms into various shapes of electricity also known as *lightning*. When the ion vortexes do not collapse but actually expand we call that phenomena a *tornado* or cyclone. Lightning is a collapsing ion vortex and a tornado is an expanding ion vortex that is created by the intense

multiple seven wave harmonic tones coming from the sun.

The present attempts to fuse particles of gas or water at room temperature (cold fusion) or higher temperatures require vast containment systems and are very inefficient. Duplicating and magnifying the *Rhythms of Nature* to achieve a fusion energy device makes more logical sense than trying to fuse isotopes of gases or liquids that do not combine in nature.

I predict that within three to five years my theory of how lightning and tornados are created by nature's cold fusion process will be proven in a laboratory test tube where negative ions, harmonic tones and other simple materials will be combined to produce an electric current with very high voltage and amperage.

Conclusion

The particles called protons, neutrons, electrons and atoms by the traditional science community do not exist in nature or man made substances. The *Quantum Electron Theory* has no proof nor does QET make any sense or logic. Again, there are no such things as neutrons, electrons, protons and atoms in any form in our reality and dimension.

Each chemical element is *particles of condensed light* from the spectrum of red to purple shaped by 96 specific harmonic tones creating a spherical molecular geometry for

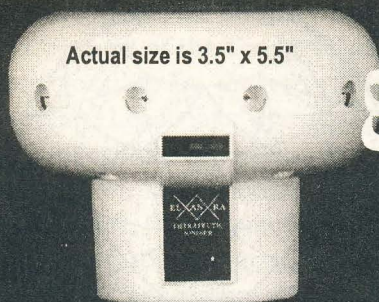

each element.

The particles called *Ultimate Physical Atoms* (UPAs) viewed by Besant and Leadbeater were the bits of matter that made up the nine "levels" of existence - the UPA cannot be counted as a "level" of existence so therefore Besant and Leadbeater viewed nine "levels".

The nine "levels" of matter viewed by Besant and Leadbeater were not *levels* but actually nine different viewpoints of the same molecule shaped by the specific 96 harmonic tones of the particular element. In Besant and Leadbeater's reality during their remote viewing sessions they were stepping down to smaller levels of existence but actually they were *shifting* rather than reducing down their viewpoints of the molecule that presented nine different geometric shapes of the same molecule related to a specific element.

The nine different geometric shapes created within each spherical molecule of each specific element viewed by Besant and Leadbeater are constructed of condensed light particles (UPAs) being phased into reality by 96 harmonic tones utilizing the multiple seven pattern.

Molecules of different elements interact and interlock according to there specific harmonic frequencies and now we are on the threshold of unlocking the harmonic *Rhythms of Nature*. —BDA

The Three Essentials

"An ounce of prevention is worth a pound of cure" goes the old saying, and who wouldn't prefer to maintain good health rather than begin a desperate search for remedies once illness has taken hold. With hospital charges and medical insurance premiums skyrocketing, more people are relying on preventative and alternative health care than ever before.

Barring accident or injury, there are basically three requirements for optimum health and well-being, and in the western world at least, they are readily available... Good food, good water and good air.

The most important necessity for life is good air quality, a fact that's too easy to overlook. Pollution is an obvious hazard, but what we can't see can also pose a serious threat to well-being. Not many people are aware that the electrical charge of the air we breathe—positive or negative—has a crucial effect on health and well being.

Explaining Negative Ions

Negative air ions are short-lived, electrically charged particles that are found in abundance in natural settings like the seashore, near waterfalls and in pine forests, but are seriously depleted in urban environments and inside the average home. The smallest of these oxygen particles can be breathed in and enter the bloodstream through the lungs, improving bodily efficiency and helping to stave off allergies and physical and emotional illness.

Before you say "Rubbish!" consider this:

- As long ago as the 1930's science had proven that small negative ions of oxygen were of benefit to all living organisms.
- In the 1950's separate research programs in the USA, Israel and the former Soviet Union demonstrated that, in an atmosphere depleted of small negative ions,

bacteria flourished, laboratory animals became lethargic and developed illnesses, and humans became irritable, argumentative and depressed.

- Further research demonstrated that an abundance of small neg-ions, mechanically generated and breathed in by subjects, reversed these effects and resulted in improved levels of performance and well-being. Asthma, allergies, blood pressure, insomnia, sex drive and wound healing are just a few of the conditions aided by ionization.

Note: Ionisers used in the above experimentation utilised a radioactive source (tritium) to produce small negative ions.

The World's

Only Therapeutic Ioniser

Now however, after years of painstaking research, Australian Joshua Shaw has invented and patented the world's only therapeutic ioniser, named the *Elanra*. It is safe to use, stunningly effective and registered by the Australian government as a therapeutic device.

This machine has proven its worth to thousands of individuals in Australia and overseas. It has been examined, tested and highly praised by international experts in the field of electromedicine.

Joshua Shaw's Australian research clearly demonstrated that small negative ions of oxygen, when inhaled, increase the body's production of *Immunoglobulin A*, an important immune factor. It's also known, that elevated levels of the neurotransmitter *serotonin* can cause a range of unpleasant effects from allergies to depression, and that exposure to small negative ions will bring *serotonin* back into balance, relieving symptoms.

For example, **Violet Kennedy** is in her late sixties and has suffered from asthma and sinus problems for years. She had been using her *Elanra* for less than a month when she

reported the changes in her condition as "a miracle". She no longer uses her nebuliser or asthma drugs and said, "I feel a renewed sense of energy. I wake up feeling great. I'd been coughing non-stop for six weeks, and the first night I put the ioniser beside my bed I slept right through till morning."

Dana Liddell had purchased her ioniser in an effort to overcome combination of stress, migraine headache and unpleasant menopausal symptoms. Dana states: "I can't use oestrogen replacement therapy, but since receiving the *Elanra* less than a week ago, the hot flashes have stopped and I'm less stressed."

Georgina is an asthmatic who has been severely affected by recent bad weather and smoke from neighbours' wood fires. She found that the *Elanra* provided "an immense improvement. There's no more of that suffocating breathlessness during the night," she said, "And I can breathe easily in the morning. My energy level is increasing all the time, so now I'm able to maintain a fairly active day."

An Interesting Side Effect

There's one interesting side-effect... all of these people spoke of enjoying deep restful sleep, some even mentioning they now remembered their dreams (invariably pleasant ones) quite clearly in the morning.

The *Elanra* can be programmed to 144 different configurations to help relieve a wide range of ailments, from headaches and respiratory problems to depression, mood swings and insomnia. There's no mystery to it. Nature intended us to breathe in small negative ions of oxygen. Without them living organisms cannot survive at all and unfortunately, the technology-rich environment we have created destroys the ion balance of the air we breathe. We can't turn back the clock, but we can use technology to help restore that balance - and the inner balance of our own complex biology.

Electrotherapy

For years, Dr. Becker in his book, *Body Electric* (and later in *Cross Currents*) had been espousing the use of micro-currents to speed healing. His pioneering research greatly expanded the work began by D'Arsonval, Tesla, and Lakhovsky. Some of the astounding revelations by Becker were ignored by orthodox physicians, but enthusiastically embraced by those involved in the demanding fields of Space Medicine and Sports Medicine.

NASA and the Sports World has long been aware of the benefits of applying electrical currents to the body to heal or induce fast deep healing. In the late 1970s an advanced electromedicine device called the **Electro-Acuscope/Myopulse** was introduced. Even though the FDA approved the machine for humans since 1978, the medical profession has managed to downplay and discourage the use of electricity or magnetism in healing.

Utilizing many of the principles of discovered in Dr. Becker's bioelectric research, the *Acuscope* was highlighted in *Sports Illustrated* when Terry Bradshaw, quarterback for the Pittsburgh Steelers used it to heal his throwing arm.

In the 1983 Football Season, Terry Bradshaw's right arm was so sore from off-season elbow surgery and a strained triceps that it was virtu-

ally useless. After one treatment, he had 60% relief from the pain and swelling. On the next day he had received 80% relief. Ten days later, Bradshaw was able to play professional football again! Terry commented on the *Electro-Acuscope*:

It takes away the pain almost immediately. I mean it really is good on pain...And so now I started the Acuscope. I've had four treatments as of this date and threw today with no pain—zero—no pain at all.

Not limited to football superstars, other athletes began using it. Professional golfer Jack Nicklaus credited the *Acuscope* for extending his golfing career:

I'm not sure how much longer I would have played golf if I hadn't started on this program two years ago. I've gotten tremendous results. I had this tendonitis in my elbow for well over a year and a half and they put me on the Acuscope and Myopulse for two or three treatments and it was gone in a week.

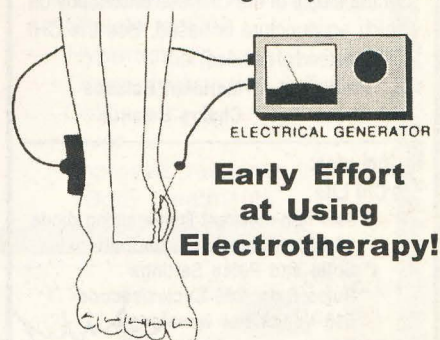

The *Electro-Acuscope* has also been used by the *San Francisco 49'ers*, the *US Olympic Ski Team*, the *Shreveport Bone and Joint Clinic*, *Texas A & M University*, *Louisiana State University*, many doctors, chiropractors and physical therapy centers.

Praised by professional athletes for its fast healing ability, it is time that the this wonder of electromedicine is acknowledged and made available to the general public!

The Electro-Acuscope

The *Electro-Acuscope* is a highly sophisticated electronic medical instrument which is designed to scan and treat many types of pain. It is one of a class of electrical stimulators called TENS (Transcutaneous Electrical Nerve Stimulation.) TENS means that the instrument uses electricity to treat pain by stimulating the nervous system of your body without puncturing the skin in any way.

The *Electro-Acuscope* system is the most technologically advanced

A fracture at the ankle had failed to heal. A metal wire electrode was placed directly into the fracture and connected to the negative terminal of a DC generator. The positive terminal was connected to a flat electrode on the skin of the leg opposite the fracture, and the current flowed through the fracture site. In eight weeks the fracture had healed. (*Cross Currents* by Robert O. Becker, MD)

Chi Lite

ACUPUNCTURE POINT STIMULATOR

CHI or **QI** (pronounced *chee*) is the principal vital energy in the living organism responsible for the life process, according to traditional Chinese medicine. The circulation of energy is the central thesis of the Chinese philosophy on which acupuncture is based. Use the CHI LITE (instead of needles) for:

- * Pain
- * Meridian Balance
- * Stress
- * Chakra Balance

Kit Includes:

- * Chi Lite
- * Safe non-coherent light-emitting diode
- * 15,000 millicandle illumination
- * Solid and Pulse Settings
- * Pulse Rate: 266 Cycles/second
- * 660 Nanometer wavelength
- * 2 AA batteries
- * Carrying Pouch
- * Instructions

and effective TENS equipment, available in health care today. The *Acuscope* has both diagnostic and therapeutic functions. It actually provides feedback which indicates the location of a pathologic condition or area of pain. It also tells the therapist when an area has been successfully treated.

The unique feature of the *Acuscope* which sets it apart from other electrical stimulation devices is the microchip circuitry designed to monitor the tissue placed between the probes. Based on the information it gathers, the unit is programmed to calculate appropriate corrective feedback modulated waveform variance. Other electrical stimulation units produce a fixed output according to preset specifications.

The *Acuscope* picks up abnormalities in nerve fiber impulses and modifies its infinitely variable squarewave envelope output appropriately until normal waveform patterns are being conducted without resistance through the circuit completed between the tissue and the probes. The *Acuscope* reads neurological impedance along the current flow and can discriminate points of high or low resistance.

Incorporating advanced electronic technology, the *Electro-Acuscope* detects subtle electrical blockages and imbalances in the painful areas of the body. This may be heard as a low pitched tone from the instrument's biofeedback sound mechanisms, and seen as numbers reading low on the lighted digital display which ranges from 1 to 100.

When the tissues of the painful area being treated have returned to a highly conductive electrical state, the instrument gives a clear, high pitched tone and the lighted numbers on the instrument face give a readout consistently over 100. Most patients find it interesting to see and hear this pro-

cess occur as they are being treated and relief from pain generally occurs at this time or soon after.

The Acuscope does not heal. It makes the body heal itself by stimulating the supply of blood and oxygen to the involved area. No drugs or needles are used in the treatment. It is effective in the treatment of many types of tissue damage and is a particularly useful therapy for swelling, inflammation, and soreness. There is no danger of over-treatment, the machine can not cause damage to the tissue.

Microcurrent Stimulation

The most conspicuous contributing factor to the system's effectiveness, is the minute level of electricity generated by the system—measured in microamps (millionths of an amp), an extremely tiny amount of current. It has been scientifically proven that this level of current produces the most beneficial effect on the body's cells. Even some of the most conservative medical pain management facilities now accept the concept of micro-current stimulation, because the validity of consistent results cannot be denied.

The modalities are applied primarily for pain relief, to improve soft tissue function and increase range of motion. Numerous recent studies shows that micro-current stimulation has a profoundly beneficial effect on living tissue at the cellular level. Micro-amperage (below 1 milliamp) is the naturally occurring level of current generated throughout the body. With this in mind, it is easy to understand why supplying the kind of current naturally occurring in healthy tissue promotes regenerative metabolic activity.

Pain Reduction Therapy

The human body is made up of a vast number of cells. In many ways, the cells of the human body act like tiny batteries, storing and releasing

energy. Each cell has a measurable electrical charge and therefore there is a constant energy flow maintained between cells throughout the electrical circuitry of the body.

When damage or trauma occurs, there is a disruption in the production of electricity and a measurable decrease in the flow of energy through the tissues involved. This condition is generally accompanied by a sensation of pain in the area and usually results in the body's inability to readily repair itself.

During treatment, the *Electro-Acuscope* introduces mild electrical currents into the cells of your body in order to return the tissue to a normal level of electrical activity. This process may be likened to a "jump start" and "putting a charge" on the battery of a car. In this way, the instrument assists the body in accelerating the natural self healing processes.

In addition to providing the body with beneficial electrical currents that create cellular harmony, the treatment causes the body to produce its own natural pain reducing chemicals called "endorphins"—a product of balanced calcium ionic fields around the cells. The immediate pain relieving results of an *Acuscope* treatment may therefore be considered an electro- chemical response occurring in the involved area at a cellular level.

In contrast to all milli-ampere nerve stimulation devices (ordinary TENS) designed to bombard the tissue and block pain signals from reaching the brain, the *Acuscope* generates only the level of current required to *gently* encourage nerve fiber to return to conduction of normal electrical impulses.

A series of treatments have a positive cumulative effect unlike ordinary TENS devices which pro-

vide only temporary relief. The treatments greatly reduce common pain and swelling and increase range of motion limitations associated with many joint pathologies.

By definition, the cumulative effect means that each treatment of a given area will take a shorter amount of time and the pain relief which follows will last longer and longer. Unlike other forms of pain relief, such as therapy with certain drugs, the body does not build up a tolerance to *Acuscope* treatments. In fact, just the opposite effect occurs.

Mild current electrical stimulation has been proven (Change, 1972) to harmonize the cells of the body to produce chemicals which are responsible for cellular energy production and may be thought of

as the fuel which allows the cells to begin to repair themselves. As these chemical reactions build up, the body's response to each treatment becomes stronger and stronger and the pain relief lasts longer. With each treatment the tissues are able to repair themselves more completely. In most cases, a series of treatments leads to permanent relief or to a greatly diminished level of pain.

Application Techniques

A wide variety of electrodes have been designed by a team of biomedical engineers. This allows versatility in selecting the most appropriate and effective probe, plate or roller for the treatment.

The probes (or electrodes) and skin is generally moistened with one of two types of specially formulated

Effective Applications of Acuscope/Myopulse

The Acuscope/Myopulse has proven effective for the relief of pain associated with the condition below, to mention a few (Christy Graves, MD):

Body Applications:

Neurological

- Tics, Neuritis, Neuralgia
- Nerve Damage, Sensory Loss
- Headaches
- Tinnitus
- Neurogras

Internal Organs

- Menstrual Disorders
- Decubitus Ulcers
- Lymph Nodes (Infections)

Muscle/Skeletal

- Sprain, strains, and tears
- Tendonitis
- Muscle spasms
- Degenerative Joint Disease
- Trauma
- Back/disc, TMI, Carpal Tunnel

Brain Applications:

Psychological

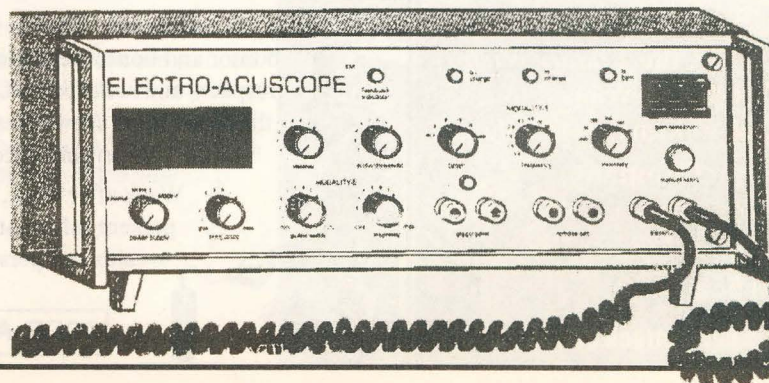

- Stress
- Anxiety
- Depression
- Insomnia

Organic

- Headache
- Stroke
- Vertigo
- Epilepsy
- Chemical Dependency
- Autism

Systemic Pains and Dysfunctions

- Radiating and Referred Pains
- Muscle tension
- Hypertension
- Organ dysfunction/Asthma, Colitis, etc.
- Hives
- Improved response to Body Treatments

Are you Suffering... from menopause?

Use Fem-Phase™

For Temporary Herbal Relief
of Symptoms in Perimenopause

Introducing...Fem-Phase™

It is crucial to attain physiological hormone balance. This can only be done by utilizing your body's natural, internal homeostatic balancing system. Fem-Phase contains 15 natural herb extracts, scientifically balanced for a woman's natural rhythm. An olive oil base insures complete absorption.

Fem-Phase supplies supportive natural phyto-hormones (phyto = plant); which support and communicate with the human endocrine system. During the absorption process, these phyto-pharmaceuticals support numerous hormones of the endocrine system and are self-regulating... eliminating a host of menopausal discomforts and symptoms.

Fem-Phase™ Side Effects

Fem-Phase does have few side effects... all of them beneficial to maintaining a youthful, feminine appearance.

- Helps Slow Aging Process
- Helps Prevent Wrinkles
- Helps Women Maintain a Feminine Voice
- Helps Increase Bone Mass
- Increases Skin Tone
- Reduces Retained Water
- Stimulates the Natural Production of Progesterone and DHEA
- Supports the Adrenal Glands

wetting solution to enhance bio-electric conduction. One formulation is open wounds and the other is for intact skin. Some patients with swelling and extreme sensitivity to touch may experience some discomfort from the pressure of the probes. Most patients, however, feel only a gentle or firm pressure at the points of contact, or the massaging effect of some of the larger, rounded brass electrodes.

Contact pads may be taped in place to provide extended stimulation to a specific area in need of prolonged treatment. Your hands, feet or other surfaces may be placed in contact with the large brass plates; or you may be treated with a headband or ear clip set to produce overall body relief or relaxation.

Whichever attachment is used with the *Electro-Acuscope*, the experience of treatment is generally quite comfortable, most often even enjoyable.

Painless Treatments...

Usually, *Acuscope* treatments are painless. A tiny pulse, vibration, or just a slight current slightly pricking the skin are what some patients report feeling. During treatment, most patients feel nothing except relief and report only the sensations of general relaxation, warmth or a alternating, tingling pulse in the area being treated. If there is any dis-

comfort whatsoever, your doctor or therapist can adjust the settings to your comfort.

There are no true side effects; that is, there are no long-term side effects. Some temporary discomfort may be experienced after the treatment. The possibilities include headache, nausea, and increased pain. Fortunately these side effects are rare and usually occur, if at all, following the first one to three treatments only.

Any change, including temporary increased discomfort, is a good sign. It shows change is going on in your body. Almost everyone who feels some increase in pain immediately or soon after the first treatment has a decreased long-term pain response.

I whole heartedly encourage anyone with long term or painful injuries to check out electro-acuscope treatment as an alternative to traditional methods of treatment. It worked for Terry Bradshaw... and it may work on you too! **__RR**

Tribulus Terrestris L

Secret Soviet Performance Enhancer

Better than VIAGRA!!!

Steven G. Ammerman

SCA International • 103 Sunrise Court • Palmer, TX 75152

Nature's Medicine Chest

Nature often provides its greatest medicinal benefits in the most unlikely places. *Tribulus Terrestris L* commonly known as the *puncture weed* (or *caltrops*) is no exception. The extract of the spiny burr that is the fruit of the puncture weed contains valuable healing properties. The puncture vine grows in moist sandy soils on every continent. The burr clings to the hooves and fur of animals, as well as clothing, bicycle tires, and automobile tires — thus propagating itself all over the world. Not only is it one of the world's most travelled plants, it is also one of the most potent healing plants. Long hailed as a folk medicine in Europe to treat all types of body sores and diseases of the liver, kidneys and urinary tract, it was also used to help infertility in women, and impotence in males. It was known as a tonic to increase the sexual libido of men and women. Only recently was it discovered that the *Tribulus Terrestris L* extract was the potent, secret ingredient that propelled Soviet athletes to international fame.

Information about the plant became known in America in 1983 from the *Handbook of Chinese Herbs and Formulas, Volume 1*, by Him-che Yeung in Los Angeles, and the 1985 *Chemical Constituents of Oriental Herbs*, volume 2, by Hong-Yen Hsu and others (Long Beach: Oriental Healing Arts Institute). Most

of the available research, however, has been conducted and published in Europe.

Athlete's Dream

The fall of the Iron Curtain has now made this secret ingredient of Soviet athletes available to the Western European nations and the United States. Some formulations of this supplement have been approved for use by the American weightlifting team as well as the NBA's *Chicago Bulls* through the strength and conditioning consultant Al Vermeil.

Bodybuilders are pumped up about *Tribulus Terrestris L* and may have just stumbled across the next hot herb of the year. Bodybuilders use it because they believe it is a *safe alternative to anabolic steroids*. It appears to help increase stamina and has been used in studies for treating infertility in women and impotence in males.

Tribulus Terrestris L has been used for some time by Bulgarian strength athletes, especially using the last 10 days prior to competition. Active

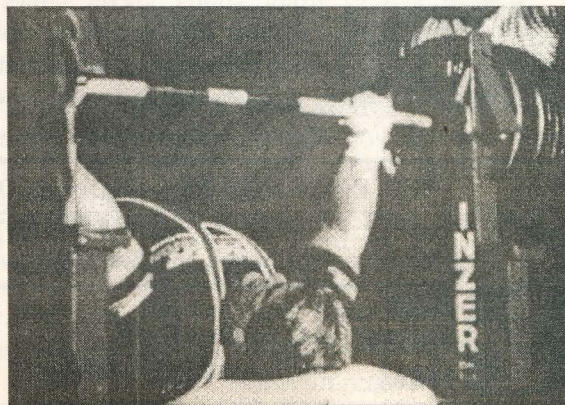

components are reported to be effective plant steroids, flavonoids, alkaloids, and glycosides. *Tribulus Terrestris L* has been shown in at least one study to increase levels of testosterone, lutenizing hormone, follicle stimulating hormone and steroids without any harmful side effects. Some may find increased stamina beneficial for developing muscle size and strength.

Better than VIAGRA!

The great news is that *Tribulus Terrestris L* is not just for bodybuilders and athletes. There are many people who could possibly benefit from *Tribulus Terrestris L* as it offers new hope for infertility and libido enhancement for the sexually-challenged, as well.

This extract has been long used in Asia as a stimulant to help treat sexual "deficiency". To study the natural hormonal treatment of dysfunction and anomalies, research was conducted by the Chemical Pharmaceutical Research Institute in Sofia, Bulgaria was developed.

Bodybuilders are pumped up about *Tribulus Terrestris L* and may have just stumbled across the next hot herb of the year.

T.T.-L

Better than VIAGRA!

**Advanced Soviet Bio-technology...
Manufactured in the United States!!!**

T.T.-L is an original all natural, non-hormonal preparation of *Tribulus Terrestris* L. Active ingredients are steroidal saponins of the furostanol type, isolated from the puncture weed.

Tribulus Terrestris has been used around the world for years as folk remedies for many ailments and conditions in addition to those related to sexual functions.

If you are on medication and start having side effects, be reevaluated. Often one can greatly reduce prescribed medications.

Guaranteed for arthritis pain — info required.

Supplement Benefits:

- Arthritis Pain Relief
- Increased Lean Muscle Mass
- Impotence - Infertility
- Hair Loss
- Rejuvenation
- Regulation of Blood Pressure
- Cholesterol Level Management
- Nail Repair & Growth
- Immune System Support
- Respiratory System Support
- Anti-Inflammatory
- Increased Stamina

IN AN EMERGENCY...

WOULD YOU BE ABLE TO FEED YOUR FAMILY?

If such an emergency arises, Government Officials may recommend evacuation of metropolitan areas. This will create serious food shortages — the time to prepare is NOW!

EMERGENCY EVACUATION KIT PROVIDES THE ANSWER!

This lightweight, READY-TO-GO pack has all the food needed to feed 4 people for 6 days—or 2 people for 10 days. With no refrigeration, it's tasty, easy to prepare and nutritious—plus, you get a great variety ... eggs, fruits, soups, juices, stews, biscuits, salads, vegetables, milk and much more. (Also ideal for camping or feeding unexpected guests.)

Store a "READY-TO-GO" kit in your car today! Don't wait until you need it... it's insurance you can eat!

REG. PRICE \$192.00 — NOW AT ONLY \$159.00
SPECIAL OFFER FOR READERS of EXOTIC RESEARCH REPORT!

These studies indicated positive effects on some key reproductive functions.

In **males**, it has been reported by some to increase libido (sexual desire), improve strength of erection and spermatogenesis (formation and development of sperm) and shown to increase testosterone levels in studies in mice (*Chemical Pharmaceutical Research Institute study*).

In **women** it increases libido, improves ovulation effect, decreases vasomotor symptoms accompanying menopause, reduces apathy and aggressiveness. One study showed a 98% reduction of menopausal symptoms. This study showed that *Tribulus Terrestris* L was equivalent or better than estrogen/testosterone hormonal preparation *Ambosex*, without adverse side effects such as virilization and weight gain.

Other positive changes observed in a number of cases were a reduction of cholesterol and positive psychological effects such as improved mood and increased self-confidence. No adverse effects were noted in any of the clinical studies. Additional research using animals demonstrated no adverse effects on the central nervous or cardiovascular systems. Administration of *Tribulus Terrestris* L had a mild diuretic effect in several cases in the human trials.

Arthritis Pain Relief

Tribulus Terrestris has been used around the world for years as folk remedies for many ailments and conditions in addition to those related to sexual functions. Some have reported using this extract for disease of the liver, kidneys, urinary tract, and all types of body sores. Others have given anecdotal evidence of hair growth and a lessening of arthritis pain, all without any side effects!

One of the most agonizing ailments the human body suffers from is arthritis. Many sufferers report such unbearable that they are willing to try *anything* for pain relief.... even treatments that are extremely hazardous to their overall health.

While there are no studies — to my knowledge — that show *Tribulus Terrestris L* cures arthritis, many users report a dramatic reduction in arthritic pain. The following unsolicited testimonial is typical for arthritic users:

I have been taking T.T.-L for three (3) months and have experienced a vast improvement in my stamina and relief from my osteoarthritis pain.

During February I had a virus and quit taking all medication and my T.T.-L. I immediately experienced the worst episode of osteoarthritic pain and loss of energy of the entire winter.

I can't live without my T.T.-L. It's been 8 years since I was first treated by an arthritis specialist and then by an orthopedic surgeon. This is the first time I have had relief from the severe pain which robbed me of my stamina, making me unable to enjoy a normal daily routine.

—L. Gibson, The Colony, TX

While it may not be a cure, it clearly reduces the pain so the victim can pursue other remedies that can get to the root of the problem and hopefully eliminate it... and *Tribulus Terrestris L* is safe and non-toxic.

T.T.-L Formulation

T.T.-L — what I consider to be the most potent formulation of *Tribulus Terrestris L* on the market — is an original all natural, nonhormonal preparation. Active are steroidal saponins of the furostanol type, isolated from the puncture weed. **T.T.-L** is imported from Russia and

A Testimonial to TT-L's Effectiveness...

Dear Steve,

Once again I apologize for taking long to get back to you about the results we have had with TTL. As you know, I began using it to help with my lower back arthritis. In January 1997 my Dad had open heart surgery. He had a difficult time recuperating because of the extensiveness of the operations, 3 in 5 days.

After returning home, Dad had a difficult time with his blood pressure. The cardiologist tried everything he could, but Dad's blood pressure was 200+ over 100+. At that point Dad was taking four oral prescriptions and one patch for specifically for blood pressure.

In April I suggested to Dad that he begin taking TTL to help his stamina as he still tired easily. After three weeks his blood pressure began coming down. One week later the doctor took him off of one of his oral prescriptions. Two weeks later he came off the patch. One month later the doctor took him off another pill. In July, the doctor reduced one of his remaining two prescriptions by half. So now instead of 4 pills and a patch with 200+/100+ blood pressure, Dad now takes 1 and one-fourth pill and has a blood pressure that will sometimes drop too low but averages 130/75. I'm 43 and that is what mine is.

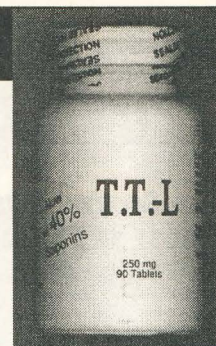

And it did increase his stamina. As I told you when we spoke a couple of days ago Dad is now mowing his half acre lawn on his own all at once and is now making plans to move to the mountains of New Mexico. Prayers, good care and TTL have really improved the quality of Dad's life.

Oh yeah! When I asked him about his aches and pains in his legs he asked "what are you taking about? I don't have any anymore."

As far as I'm concerned, my lower back pain has diminished to a point that I have greater mobility now than I have had in several years. I have not changed my diet and my cholesterol has come down 20-30 points on the average. I donate blood every eight weeks and the lab checks my cholesterol free so I started keeping a close eye when I was warned that it had gone to a high about 5 years ago to a point over 200. Now it is 160 or 170 each time. I don't know whether TTL has had any chemical role in reducing the cholesterol or it may be that I am getting more exercise since I am feeling better and that may be the factor. Either way, I am feeling better.

As always I remain a servant of the Most High God and,
Your brother in Christ our Lord,

— D.E. Newsom 1st
Midlothian, TX

is now available to the average American without a prescription.

Only the finest *Tribulus Terrestris L* extract—not just powder—is used in this formulation. Extracts are much more effective and costly than cheap imitations from powder of crushed plants. **T.T.-L** contains 40% steroidal saponins of the furostanol type—the active ingredient— isolated from the lowly puncture weed.

For those that may try this new supplement, the current recommended dosage is:

One (1) tablet three (3) times daily with meals (or one tablet for every 88 pounds of body weight) for 30 days. After 30 days, try maintenance of one-half (1/2) tablet three times per day.

The above is intended for informational purposes only — not to diagnose or treat any medical conditions. If you are taking any medications, please consult with your physician before taking **T.T.-L** or any other supplement. In many cases, medications have been greatly reduced or eliminated. **__SA**

"15 DAYS FOOD SUPPLY UNDER A POUND"

The *Survival Tabs* have been on Mt. Everest Expeditions.

The *Alaskan Helicopter Search & Rescue Team* packs them!

The *Survival Tabs* are everywhere there's an emergency food situation.

They were on the *Great Australian Bicentennial Camel Race*!

EMERGENCY SURVIVAL TABS

A Complete Meal in Tablet Form

Evolved from the Early Space Program

The *Survival Tab* has a long history. Back in the 1960s, the Federal government was searching for a food source that could be used in specialty situations. The objective was to find a product that would provide the best possible nutrition in the smallest possible volume. It came to be known as the *Survival Tab*!

12 Tabs per day is all you'll need!

The *Survival Tab* will keep you alive and moving for months at a time on an amount you can carry in your backpack. Our recommended consumption of 12 Tabs per day may be decreased when other foods are available in adequate amounts and quality or it may be increased in times of complete starvation or extreme physical exertion. Twelve tabs per day provide 100% of the U.S. RDA of 15 essential vitamins and minerals. They're literally jam-packed with concentrate nutrition. And *Survival Tabs* are so completely digestible that 99% of their calorie content can be actually be utilized for energy.

The Bottom Line

The *Survival Tabs* are a convenient compact, lightweight, lifesaving food ration for any emergency, are completely nutritious, have a 10+ year shelf life and are absolutely delicious. Just let them melt in your mouth. (You'll probably chew them up—they are so irresistibly good tasting!)

An Offer and 2 Free Bonuses Where You Can't Lose

Try a bottle of the *Survival Tabs* (180 Tabs). It's a 15 day supply. The price is \$24.75 per bottle. We'll pay the freight. As a bonus for ordering the *Survival Tabs* now, we'll send you a **Free Special Report: "The Essentials Every Family Needs to Survive a Disaster."** It lists the essentials along with a detailed checklist of other items and steps that will make any ordeal comfortable. As a **second free bonus**, we will also include our **Snack Attack Pack**. This is a little container filled with the *Tabs*. You can carry them around with you in your pocket or purse, and have a little snack, whenever you'd like.

NO RISK TRIAL

Our Money Back Guarantee...
Try them before you keep them

With the *Snack Attack Pack*, you'll be able to taste and try the *Tabs*. If you decide you don't want them, send us the unopened bottle back. We will refund your dough immediately. No problem.

You can keep the *Snack Attack Pack* and the *Free Report*, regardless... as our gift for giving us a try.

Emergency Survival Tabs Ordering Instructions

STEVIA

Safe, Natural Alternative to NutraSweet™

Major threat to billion dollar artificial sweetener industry...
Cookbooks banned in US by FDA!!!

Mary Nash Stoddard

ACSN • PO Box 780634 • Dallas TX 75378-0634

A Sweet Herb...

As the dangers inherent in the consumption of "aspartame" become publicly known, the race is on to find a new sweetener. Monsanto has put its faith in the new artificial sweetener... **Neotame**.

(*Neotame* is a cousin to *aspartame* so one should expect to find similar health hazards.) However, those on the alert for a *natural* sweetener should check out the herb — *Stevia rebaudiana Bertoni*, better known as *stevia* or "honey leaf." *Stevia* could be a major economic threat to established companies that manufacture artificial sweeteners. It is extremely sweet (more than 150x sugar) and it's calorie free.

The herb *stevia* is said to benefit the health of those who take it. The FDA con-

siders *stevia* safe to simply swallow as a supplement (powder or liquid), but unsafe when added to food or drink. In doing so, the FDA ignores the extensive studies done by Japan where *stevia* has been used as a sweetener for over 25 years

The extract of the *stevia* plant is a white, crystalline powder from the leaves of the *stevia rebaudiana bertonii* plant known as glycosides. The plant is native to the region of the Amambai mountain range along the Brazil-Paraguay border where the Guarani Indians have used the

stevia leaves in their medicines and drinks since pre-Colombian times. By law, *stevia* can be marketed as a dietary supplement like a vitamin but not as a food additive.

Shoved into the "Dietary Supplement" category by the FDA in 1994 when DSHEA [Dietary Supplement Health and Education Act] went into effect, *stevia* remains in a sort of "halfway house" while the FDA struggles to keep it off the market as a sweetener.

It has been used for centuries in the rest of the world as a low-calorie sweetener with no adverse reactions reported. It can be found in stores as crushed leaves, a liquid or a fluffy

white powder. Unlike *aspartame*, *stevia* is safe to cook with. But,

without guidance on ratios and conversions, the average consumer is at a loss to know how to use it. *Stevia* is less expensive to use than its synthetic counterparts.

The FDA addresses two questionable studies as absolute proof that *stevia* is not safe. The first, ineptly done by a graduate student in South America, says it may have a mild contraceptive property. The other, published in a Brazilian pharmacological journal, was extremely sloppy science and no one but the FDA gives it any credence whatsoever.

In case nobody shares FDA's "concern" about *stevia*'s possible contraceptive qualities, they came up with some strictly "hearsay" evidence, which they've never seen, through the South American "grapevine" that *stevia* may be unsafe for having a hypothetical hypoglycemic effect on some individuals. These are the extremely flimsy "straws" the FDA is grasping to support their ban on *stevia* as a sweetener.

Artificial Sweeteners...

The FDA continues to fiercely support Monsanto's artificial sweetener *aspartame* [*NutraSweet/Equal*] based solely on industry-sponsored tests showing "safety." [Monsanto has bought up and put on hold the U.S. patent on *stevia* manufacturing] FDA's official position is:

absolutely NOTHING is wrong or harmful about *aspartame*, despite the undisputed fact that about 80% of all adverse reaction complaints to FDA are aspartame related.

Unlike pharmaceuticals—serious adverse reactions to a food additive are not required by law to be reported by physicians. FDA lists over 92 symptoms consumers have tied to aspartame consumption — including deaths. Reports show that when individuals get off of *aspartame*, their symptoms usually go away.

"Junk Science" or worse was used by G.D. Searle to gain approval for

**Freedom of the Press embraces

Mr. Oscar D. Rodas, President
Stevita Co., Inc.
7650 Highway 287, Suite 100
Arlington, Texas 76017

Dear Mr. Rodas:

This letter is written in response to the May 13, 1998 letter by Ms. Jaylene M. Sarracino, Esq., addressed to the attention of Ms. Stella Notzon of this office, on the subject of further detainment of Stevita Co. stevia products under Entry Numbers 125-0981854-3 & 125-0981567-1. Ms. Sarracino's letter documents a telephone conversation with Ms. Notzon on the subject of cookbooks and other publications used in the marketing of your stevia products. In her letter, Ms. Sarracino states that on May 14, 1998, Stevita Co. will discontinue the sale of any publications, and will sever all links to web-site information referencing the questionable use of stevia products. She indicates the stevia products will be marketed strictly as dietary supplements with only the labeling currently appearing on the product containers.

The agency appreciates Stevita Co's expressed intention to comply with the law. However, a current inventory must be taken by an investigator of this office, who will also be available **to witness destruction of the cookbooks, literature and other publications** for the purpose of verifying compliance. Additionally, your stevia products currently in distributor and retail channels with the offending cookbooks, literature and other publications continue to be in violation of the Federal Food, Drug and Cosmetic Act (the Act). These products are unapproved food additives in violation of Section 409, and adulterated within the meaning of Section 402 (a) (2) (c) of the Act.

We are prepared to pursue further regulatory action against these products should they continue to be adulterated in distribution. The inspection of your facility on April 27, 1998 conducted jointly by investigators of the Food and Drug Administration (FDA) and the Texas Department of Health, along with visits to your consignees, documented your firm's continued marketing of your stevia products as conventional foods accompanied by offending **literature, cookbooks and other publications**, in violation of the Act as cited in the FDA warning letter of March 6, 1998.

Further regulatory action will be considered against new shipments of stevia products marketed in this manner, as well as against those parent lots from which the adulterated products are being marketed.

If you have any questions regarding this letter, you may call me at 214 655-5318, ext. 517.

Sincerely,
James R. Lahar
Compliance Officer

A "Smoking Gun" Letter

[Emphasis added]

aspartame in the first place as a tabletop sweetener (in 1981 and 1983) for aqueous solution [soft drinks]. Some FDA toxicologists even went as far as to show the tests were "falsified" to get *aspartame* approved in the first place. *Aspartame* was first FDA-approved in 1974, but that approval was rescinded before it could get to the market place because of concerns about one of the breakdown products, *DKP* causing brain tumors in laboratory animals. At a Washington DC news conference, November 1997, John Olney, MD, noted brain researcher, presented his compelling findings of a **10% increase in brain tumors** since the advent of *aspartame* on the market.

Further troubling to many independent scientists is the fact that virtually all of the studies showing harm are "corporate neutral" as one *aspartame* researcher put it. Many studies are available to show harm caused by *aspartame*'s toxic breakdown products:

- methanol
- formaldehyde
- formic acid
- diketopiperazine (DKP).

Tens of thousands of consumers and others have reported serious adverse reactions to the FDA and consumer advocacy organizations collecting reports such as the *Aspartame Consumer Safety Network*. Yet, the FDA continues to support *aspartame* and embargo the natural alternative... *stevia*. One would think brain tumors are more serious than a possible contraceptive effect. Could the controversy over *stevia* be related to FDA's defensive attitude over *aspartame*?

Tangled Webs...

There is a secret war going on in this country of which most consumers are unaware—between the FDA-supported giants of the artifi-

Steviafarma Industrial is the only large source of solid Stevia extract in the Western Hemisphere, and has the great advantage of being located where the plant is native, thus having all of the ideal conditions for abundant production. In addition to the company's own plant development and study farm, it has an area of over 100 hectares (about 250 acres) that are fully irrigated and in cultivation.

cial sweetener industry versus those manufacturers who offer the public a safe, natural alternative to those synthetic sweeteners produced in a chemist's lab. It is about money and power — greed and avarice.

At stake are billions of dollars spent by health-conscious American consumers, most of whom admirably wish to avoid as many things "chemical" and "artificial" in their food supply as possible.

The United States Food and Drug Administration (FDA) is supposed to protect the public's health. However, when one begins examining their behavior with respect to *stevia*, one wonders where their loyalties lie... with the consuming public (who pays their official compensation) or the corporate artificial sweetener manufacturers? For some odd reason, the FDA is obsessed with keeping *stevia* out of this country at all costs.

Until 1995, the FDA enforced an all-out ban on the import of *stevia*, labeling it an *unsafe food additive*. Then, the passage of the *Dietary Supplement Health and Education Act of 1994* (DSHEA) made *stevia* leaves, the extract of *stevia* leaves, or *stevioside* allowable for import and commerce in the United States of America, if they are explicitly labeled as a **Dietary Supplement**, or for use as a dietary ingredient of a dietary supplement.

While DSHEA placed *stevia* beyond the FDA's reach, it prohibits manufacturers from making any claims that even imply *stevia* is sweet. Such an action would place it into the *food additive* category and allow the agency to declare it unsafe. So while marketers can't mention *stevia*'s biggest selling point — its sweetness — they are free to sell it as a dietary supplement. (Dietary benefits are blood sugar regulation and digestion aid.)

A major effort — complete with petitions and supporting documentation — is underway to have *stevia* recognized as a "GRAS" (Generally Recognized As Safe) food additive. However, the FDA claims no petitions have been filed by product manufacturers seeking to use *stevia* as an ingredient in their product.

What they really mean is that the FDA has never accepted a petition filed by a food or beverage manufacturer seeking to use *stevia* as a sweetener in their product. Several, including Lipton, filed petitions only to be denied acceptance for some FDA-invented "technical error."

FDA attempts to compel the destruction of cookbooks

In an unprecedented move earlier this year, FDA officials threatened legal action against Texas-based Stevita Co.—importers of the sweet-tasting herbal dietary supplement, *stevia*—for distributing books and literature about their product. The three books in particular are:

- *Cooking with Stevia: The Naturally Sweet & Calorie-Free Herb* -- James Kirkland
- *Stevia Rebaudiana: Nature's Sweet Secret* -- David Richard
- *The Stevia Story: A tale of incredible sweetness & intrigue* -- Linda Bonvie, Bill Bonvie and Donna Gates

This is but another volley in a bitter campaign against Texas-based Stevita Company by federal Food and Drug Administration (FDA) officials. Stevita Company, Inc is a marketer of *stevia* products imported from Brazil, where company president, Oscar Rodes owns the patent. The US patent for manufacturing *stevia* products has been "bought up but not used" by Monsanto [makers of controversial artificial sweetener, *NutraSweet*]

The FDA, an agency of the federal government, is responsible for upholding the U.S. Constitution which guarantees freedom of speech and expression. This responsibility was

drawn into question on May 19th when FDA Compliance Officer, James R. Lahar faxed a letter to Stevita Company addressing the destruction of 2,500 books he deemed "offending," at a cost to the company well in excess of \$10,000. The letter further threatens that investigators will conduct a current inventory and "witness the destruction of the cookbooks, literature, and other publications for the purpose of verifying compliance" upon its fourth visit to Stevita Company this year.

Tonya Rodes, marketing director for the Stevita Company said the FDA ordered the action because the books contain general information that include: history, usages and scientific studies regarding *stevia*. According to Rodes, when the FDA agents showed up, he said that he would not destroy the books unless his attorney advised him to do so. However, Rodes told them, if the FDA officers wanted to destroy them, he would merely use his video camera to record the event. The FDA officers left.

Rodes also claims that the FDA officials told him that they wanted Rodes to recall all the copies of the books he had already sold. According to Rodes, that amounts to more than 4,000 copies.

Lahar now claims he never ordered the books destroyed. In an interview, he said,

The sentence reads to the effect that if books are going to be destroyed, we'd like to observe it.

When asked then where the idea for destroying books came from, Lahar said he wouldn't answer, but referred the questions to the press office in Washington DC and FDA Associate Chief Counsel for Enforcement Anna Marie Kempic in DC. Kempic did not return calls.

When the D.C. press office was called, press officer Judith Foulke

August 26, 1998

The Honorable Dick Arney
Member, House of Representatives
9901 Valley Ranch Parkway East Ste. 3050
Irving, Texas 75063

FDA Response to Congressman Arney

Dear Mr. Arney:

This is in response to your letter of June 9, 1998, concerning the use of stevia as a sweetener in food, and concerning voluntary actions proposed by the Stevita Company of Arlington, Texas, to come into compliance with the labeling requirements for dietary supplements. These proposed actions were in response to detentions of its imported products and a warning letter from the Food and Drug Administration [FDA or the Agency]. FDA has had contact with the Stevita Company over several years about the company's importation, sale and marketing of stevia.

It must be stated first that FDA has never ordered the destruction of Stevita Company cookbooks, or any other books related to stevia, as has been alleged. In order to reiterate Agency practice and procedure regarding the disposition of publications implicated in compliance or enforcement actions, FDA issued a memorandum to remind employees in the field of Agency policy on the disposition of such publications. A copy of this memorandum is enclosed.

Stevia may be sold in the United States as a dietary supplement, but not for any use in food, including use as a sweetener. The Dietary Supplement Health and Education Act [DSHEA] of 1994 defined the terms "dietary supplement" to exclude products represented for use as conventional foods. DSHEA also excluded dietary ingredients in dietary supplements from the definition of "food additive" in the Federal Food, Drug, and Cosmetic Act [FD&C Act]. Accordingly, a product represented for use as a sweetener in food is not a dietary supplement and is subject to the food additive provisions of Section 409 of the FD & C Act, unless it is generally recognized among qualified experts as safe for its intended use in food [GRAS]. Stevia is not an approved food additive, and FDA does not believe it to be [GRAS]. For these reasons, the Agency established Import Alert #45-06, Automatic Detention of Stevia Leaves, Stevioside extract stevia leaves and Food Containing Stevia, on May 17, 1991. Following passage of DSHEA in 1994, FDA revised Import Alert #45-06 to clarify that stevia could be imported only for use as or in a dietary supplement.

In March 1998, FDA issued a warning letter to Stevita Company about its marketing of stevia with promotional literature, such as a Stevita Company cookbook, which described the sweetener use of Stevita stevia in food. This type of promotional literature, all of which referred to Stevita Company stevia, is considered labeling under the FD&C Act. Because such literature represented the stevia products for use as a sweetener, i.e., as a conventional food, it rendered the products unapproved food additives under the FD&C Act. Subsequently, FDA detained some stevia that the Stevita Company was intending to import.

In response to the warning letter, the attorney for Stevita Company informed FDA of the company's intention to cease marketing stevia with Stevita stevia cookbooks and other promotional literature in question, and to conduct a withdrawal of the books and literature from its retailers for return to the Stevita Company. In a voluntary compliance situation, such as the subject Stevita matter, the disposition of any printed materials that function as labeling is the prerogative of the manufacturer, distributor, wholesaler, or retailer.

It is standard practice for FDA to verify activities agreed to by manufacturers and distributors in order to come into compliance with the requirements of the FD&C Act. Stevita Company had a number of available options for bringing its activities into compliance. Because FDA believed that the company intended to destroy its remaining inventory of promotional literature, and FDA advised the company that it was available to witness such compliance activity should the company choose that alternative. This notification may have been based on a misunderstanding of the company's intentions; however, at no time did the Agency request or require the destruction of the cookbooks or any other related literature.

On June 29, 1998, the Agency informed Stevita Company's attorney that it was releasing the detained stevia because Stevita Company had relabeled its stevia products, had ceased marketing them with materials that represented them for use as a sweetener in food, and had agreed to a market withdrawal of such materials. In that letter, FDA specifically reminded the company that there are ways of selling stevia cookbooks that do not cause them to become labeling for Stevita's products.

We hope this information is helpful.

Sincerely,
Jane F. Kirby
for Melinda K. Plaisier
Deputy Associate Commissioner for Legislative Affairs

said she couldn't answer any questions about this case because the matter was still under investigation — a convenient Catch 22. She couldn't even comment on the destroy-the-books letter.

The FDA was not satisfied with harassing the Stevita Company. In a blatant move to intimidate customers of Stevita, FDA raiders began searching for their version of "the offensive literature" according to an eyewitness shopper at an Arlington, Texas health food store. Dallas FDA agents even went so far as to mark up copies of the offending books so that they couldn't be sold.

Clearly these agents violated the law. The FDA has no legal authority to destroy books. None whatsoever — no matter whose economic interests are at stake.

A Danger to Society...

The FDA's ability to evaluate any substance objectively has been called into question by consumers and independent researchers alike. Senator Metzenbaum called FDA officials mere "Handmaidens to Industry" in the 1987 *Senate Hearings on the Safety of Aspartame*. Corporate megabucks influence and determine the actions of that government agency created to protect the consumer from harm.

Corporations routinely "cover themselves" by donating millions to organizations such as: American Dietetic Association and others. FDA officials routinely hop with jumping-bean-like ease from government to private industry and back.

Moderate critics of this government agency are suggesting not that we rid ourselves of a Food and Drug Administration—only that we rid ourselves of the present "corrupted" Food and Drug Administration thus changing the current FDA focus of protecting the profits of the giants

Department of Health & Human Services
Public Health Service - Food and Drug Administration

MEMORANDUM

August 25, 1998

From: Associate Commissioner for Regulatory Affairs

Subject: Regulatory Policy on the Disposition of Publications

To: All Office of Regulatory Affairs Employees

This memorandum is intended to remind you of our policy concerning the disposition of publications and other printed materials that cause a regulated product to violate the Federal Food, Drug, and Cosmetic Act, as amended [the Act].

As you may be aware, FDA has been accused of directing the destruction of certain cookbooks and other literature associated with the promotion and sale of stevia, an herbal substance. Although such was not the case, this matter has been reported in the press and has been raised in a number of inquiries both from the public and the Congress.

Our policy is clear: FDA does not seek or condone the destruction of books or other publications. Historically, FDA policy and practice has tried to be sensitive to the potential First Amendment issues associated with the regulation of books and other printed materials that function as labeling, or as evidence of the intended use of a product [see Compliance Policy Guide 7153.13]. As a matter of policy, FDA does not request the destruction [including burning] of books or other publications that cause a regulated product to be in violation of the Act. This policy applies both in the context of a voluntary compliance activity and as part of an enforcement action. In the context of judicial enforcement, disposition of any labeling subject to the court's jurisdiction is determined by the court. In a voluntary compliance situation, the disposition is the prerogative of the manufacturer, distributor, wholesaler, or retailer. Agency policy and practice do not authorize field employees to direct or otherwise limit the options for disposition of violative labeling or other printed materials in such circumstances. Good judgment should always be exercised in such matters.

If you have further question, please contact David Haggard, Director, Division of Compliance Policy, 301-827-0393.

Ronald G. Chesemore
Associate Commissioner for Regulatory Affairs

FDA Memo

of industry to one of protecting the American public, which it is charged to serve.

As I lectured to audiences around the country on my lecture tour, I found most people ready to reject artificial sweeteners and accept healthier alternatives. They signed our petition to the FDA asking for Generally Recognized As Safe (GRAS) status for *stevia*. Audience members looked in utter horror as I showed the videotape of the FDA "Raid" on little Stevita Company in Arlington, Texas - showing FDA agents defacing books in Stevita's warehouse.

I returned home to find a letter in my mailbox from House Majority Leader, Dick Armey. I wrote to Congressman Armey about the plight of Rodes' Arlington-based Stevita Company. He asked the

FDA for an explanation and their response is on the opposite page.

It seems obvious to me that FDA is painfully aware of the massive media attention devoted to this issue. Therefore they are attempting to erase the facts with misinformation.

Who will win the Sweetener Wars? It's up to the consuming public. You decide. Write, call, fax and email your Congressional Representatives. On the Internet access the website: www.steviapetition.org.

Tell everyone you know. Let your grocer know you want a healthy choice when it comes to sweeteners. Take aspartame-sweetened items back to the store to exchange for something healthy. One person can make a difference. Try the sweet taste of *stevia* - many say it's a safe alternative to the unhealthy chemical sweeteners. MNS

Colloidal Silver Generators

An old medical treatment is "rediscovered" and is making a comeback!

Silver, commonly valued for its monetary value, and referred to *poor man's gold*, has been used since ancient times as an antiseptic and cure for many diseases. Then, with emergence of the pharmaceutical companies it disappeared... Now it's back!!!

Some Uses of Colloidal Silver

These are some of the more than 650 diseases and conditions that colloidal silver was used to treat successfully in the past. This list in no way should be construed or relied upon as medical advice. Always consult your health care professional if a serious condition exists.

acne	lupus
allergies	lymphagitis
appendicitis	Lymes disease
arthritis	malaria
athlete's foot	meningitis
bladder inflammation	neurasthenia
blood parasites	pneumonia
boils	pleurisy
bubonic plague	prostate problems
burns	pruritus ani
cancer	psoriasis
candidiasis	rheumatism
chilblains	scarlet fever
cholera	septicemia
colitis	shingles
conjunctivitis	skin cancer
cystitis	staph infections
dermatitis	strep infections
diabetes	syphilis
dysentery	thyroid conditions
eczema	tonsillitis
fibrositis	toxemia
gastritis	trachoma
gonorrhea	dermatitis
herpes	warts
impetigo	whooping cough
indigestion	yeast infections
keratitis	stomach ulcers
leprosy	tuberculosis
leukemia	

— in other words, bacterial, fungal, and viral infections. It has also been used against *canine parvovirus* and other veterinary diseases.

Silver was used medicinally for thousands of years. In fact, it was used successfully until the early part of the 20th century as an antibiotic and prophylactic against disease. People used to put silver coins in milk to keep it from spoiling. However, with the introduction of antibiotics in the 1940's, silver dropped from use.

Like many other remedies of the past, colloidal silver is being rediscovered. Its powerful yet gentle and effective antimicrobial action spells death to one-celled organisms, yet, it is completely harmless to multicellular animals.

Because of an FDA ruling, one can discuss colloidal silver's ability to kill *Staphylococcus*, *Streptococcus*, *Candida*, and 650 other microbes, but, not make any claims that it will cure any of the diseases these organisms cause, such as *strep throat*, *pneumonia*, *ringworm*, etc. In order to make claims about colloidal silver's efficacy against diseases, one must go through the long, expensive FDA drug approval process.

But you don't have to wait. Make your own colloidal silver and decide for yourself if colloidal silver is truly effective!

Pocket Sized Colloidal Silver Generator

Colloidal Silver is a powerful natural antibacterial liquid that can be taken internally, applied externally, and used throughout the household. It costs only pennies per cup to produce with the pocket generator, which produces colloidal silver at 3-5 ppm with a particle size of 0.005-0.015 microns. This generator provides an adequate amount for personal use for up to a year! Additional information and instructions provided. Battery not included.

HP0001- Pocket Size Colloidal Silver Generator ... 6⁹⁵+S/H

Heavy Duty Colloidal Silver Generator

Designed for the high volume user, this unit will provide large quantities of colloidal silver to supply the entire family as well as general household use... such as disinfecting countertops... for up to a year of normal family use. Includes two special pure .999 silver electrodes and a cleaning pad. Additional information and instructions provided. Includes batteries.!

HP0002-HD Colloidal Silver Generator.. 79⁹⁵+S/H

S/H: \$3-US; \$4-Can/Mex; \$8-Other

Wagging the Dog!!!

The al-Shifa Pharmaceutical Factory Raid & Washington Intrigue

S.R. Elswick, Publisher—*Exotic Research Report*

Deja Vu?...

Recently, the US military made pre-emptive cruise missile attacks on what the US administration claimed were terrorist facilities. Congressional leaders rushed to embrace the President's action. The only person I saw questioning this action was former Secretary of Defence "Cap" Weinberger. He stated that he had misgivings about the timing, the protocols used, and the lack of international participation. It may turn out that he gave the most intelligent response of all.

The backdrop of the raids were eerily similar to the plot of a popular movie... *Wag the Dog*. In the movie, a president plagued by sex scandals is convinced by his advisors to stage a war to get his popularity ratings up. In real life, the President -- plagued by sex scandals -- decides to do something "Presidential" on the day of Monica's Lewinski's grand jury testimony. His "Presidential" act was to unilaterally launch missile strikes against alleged terrorist bases. (Ironically, the Presidential Press Corps had just sat down to view the movie—*Wag the Dog*—when the attacks were launched.)

Choosing terrorist targets was an ingenious ploy on the President's part. **We do not support terrorism...** whether it be state sponsored or private... and neither does the vast majority of this nation. The tarring of the targets with the terrorist brush makes it difficult to criticize the action for that very reason. However,

the manner and timing of the attacks makes it *appear* that this President will abuse the Office of the President for personal gain. Furthermore, there are strong indications coming out of Sudan that the devastated Shifa pharmaceutical factory in Khartoum, Sudan had NO CONNECTIONS with terrorist groups whatsoever and most definitely did NOT produce any biological or chemical weapons.

The al-Shifa Factory

The al-Shifa factory provided 50% of the human pharmaceutical needs of Sudan and 10% of the veterinarian pharmaceutical needs of Africa. Sudan is in a state of war and there is a US embargo on medical imports. If allowed to operate at full capacity, it would have self-satisfied the needs of Sudan and a large part of Africa in human as well as veterinarian medicines.

There are two factories like Shifa in Egypt, but for the rest of Africa, the Shifa was unique. Its products were also exported to Chad, Yemen, and it was under contract with Iraq, with U.N., approval. In short, the factory vitally served Sudanese, African, and the Arab world's need for low-cost pharmaceuticals.

When production began at the Shifa plant there were drastic decreases in local pharmaceutical prices. For example, *Rephampicin*, which is used to fight tumors and TB, which usually hit the poor, and which usually has to be used for an average of six months per patient, was being sold for only 20% of the pre-production market price.

What's wrong with this picture? None of these people are wearing protective gear. If this plant was producing TOXINS as claimed by our government officials then these folks would be DEAD! It's incidents like these that give all Americans a bad name overseas. Worse yet, it gives moderates a good reason to support radical actions against us... and we are never told the REAL reason why!

According to **Ahmed Salem** -- production manager of the Shifa factory from the day the factory was conceived on paper in 1989 until the day it perished--the factory produced medication for human and animal consumption. The al-Shifa factory consisted of three different plants:

- **General plant...** produces general medicinal products according to Good Manufacture Practice (GMP) requirements. Products produced in this plant include Paracetamol, and treatments for blood pressure, diabetes, and ulcers. The general plant is made up of two lines: 1) the tablets line, and 2) the syrups line.
- **Penicillin plant...** produces penicillin in various forms. It has two lines also: 1) capsules, and 2) dry suspensions (powders).
- **Veterinarian plant...** produces products for animal use. It is

made up of four lines, one syrups line, two dry suspension lines, and one poulas line.

Financial Aspects

The Clinton administration claims the factory was financed by terrorist leader **Bin Laden**. Ahmed Salem states otherwise:

Look, I know where every penny came from. Bin Laden, I never saw him in my life! I only learned about him from the media. Bashir Hassan Bashir, the major partner, also never knew or met Bin Laden either. Furthermore, Bin Laden never saw or been to the factory in his whole life.

The original financing came from three sources:

- **Bashir Hassan Bashir (60%)** - Sudanese businessman who has many companies in Sudan. He owns several pharmaceuticals and other companies, and is the largest importer of pharmaceuticals into Sudan. He is the sole agent of many British, Italian, Indian, and Jordanian pharmaceutical firms.
- **Baaboud Maritime Agency (40%)** - a company made up of Sudanese and Saudi investors headquartered in Jedda, Saudi Arabia. They own large ships and some maritime agencies.
- **Preferential Trade Agreement (PTA) Bank (\$5.750 million loan)** - an African bank located in Nairobi, Kenya, which operates as an investment bank for the ten East African states that have a preferential trade agreement between them.

In March 1998, the factory was sold completely to **Salah-Eddin Ahmad Idris**, a Sudanese businessman.

Ahmed Salem challenges anyone to provide evidence of financing from outside the aforementioned sources

Non-partisan, unintimidated, factual reporting of current events with the occasional glimpse into relevant history.

above. Furthermore, Mr. Salem's company is willing provide written documentation of purchases to a neutral UN commission if asked.

Roundup or Empta?

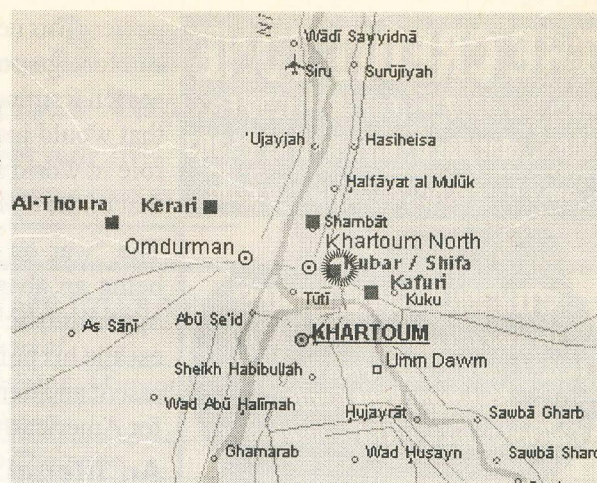

A senior American official, a few hours after the strike, claimed that al-Shifa wasn't a normal pharmaceutical factory, but was manufacturing *Empta*, which is supposedly used to produce the nerve gas VX, Iraqi-style. This claim is based upon a single soil sample that the CIA allegedly took a few yards away from the factory. They stated that lab tests revealed the presence of *Empta* therein.

Experts outside the US government point out that this lone sample — if not preserved carefully and tested promptly — could mislead since *Empta* has a similar chemical structure to several commercially available pesticides and herbicides like **Round-Up**. Still the U.S. government having launched the strike on the basis of this lone sample, insists that the sample at hand indicates the presence of *Empta* when re-tested. When confronted with this information, Ahmed Salem emphatically declared:

I do not know what the heck Empta is!! I never heard about it before.

Ahmed Salem points out that there's no proof that the CIA took any samples, unless they took them in secret, in which case he doesn't know where they took that sample from, and from which geographical spot in the world. He personally invites them to come in and take a sample from right inside the factory itself. The rubble of the factory and the soil around it are still right there. He believes that the Sudanese government has requested of the United Nations to send a neutral commission to collect any amount of samples from the soil, the build-

Insanity... If al-Shifa plant had been a nerve agent production facility half of the population of Khartoum would have been killed without even any declaration of war or warning that armed hostility existed between the United States and Sudan.... and people criticized President Reagan for "shooting from the hip!"

ings, and the machines located anywhere in and around the factory they like. It is Salem's understanding that Sudanese government will leave the factory as is for a long period to come. Nothing will be moved (unlike Waco or Oklahoma City where evidence was razed immediately).

The refreshing openness and willingness of the management of the al-Shifa Plant to show even the building plans and designs (many of which are proprietary) lends a lot of credibility to their side of the story that the Shifa factory was a civilian pharmaceutical facility, not connected to Bin Laden whatsoever.

A New Foreign Policy

Immediately after the attack, we were informed that international terrorism is now supposed to represent a threat so serious that it justifies American military action virtually unlimited in space and time—the strikes against Sudan and Afghanistan were appropriately code-named *Operation Infinite Reach*.

The total number of Americans killed in international terrorist incidents *over the past decade* is 98 (fewer than are struck by lightning in the average year), yet US officials talk of preparing for a "decades-long" struggle. This is to be accompanied by a degree of military secrecy more severe than at

any time since World War II (according to the *Times*). Such loose talk reveals the raids' true nature:

the need for a foreign enemy which provides ideological focus for the population and provides a justification for the maintenance of an immense military establishment, required both to defend the interests of American corporations abroad and suppress any challenge to the government at home.

Clinton with State Department and Pentagon officials emphasize that the missile attacks were not merely one-time efforts, but a significant change in American foreign policy. The change is not simply a political maneuver, however. With or without Lewinsky, the "war against terrorism" would have been launched.

In specialized journals devoted to American foreign policy, strategists discuss in blunt terms the issues obscured in the mass media. One expert, Harvard Professor Samuel P. Huntingdon, wrote an article in *Foreign Affairs* last year on the fall of the Iron Curtain, the end of the Cold War and its implications for the United States. His essay was filled with foreboding over the implications for US domestic political stability of the collapse of America's traditional foreign foe.

Huntingdon cited the need "to find purposes for the use of American

...the most sought out, the most relevant, and the scariest. — Qvimby's

power. This need has led the American foreign policy establishment to search frantically for new purposes that would justify a continuing US role in world affairs comparable to that of the Cold War."

The "war on terrorism," far from being an aberration, or merely an opportunistic effort by Clinton to escape his political crisis, may represent an attempt to find a new axis for American foreign policy.

An Illegal Act of War

Anytime a country unleashes its military might against another, it is an act of war. In this case, we sent 30 sophisticated missiles deep inside another country to remove a factory (in a highly populated area) engaged in an humanitarian mission... providing low cost medicine to an impoverished area of the world.

This was an act without honor. We immediately declared war upon Japan for a similar sneak attack... only their's was directly targeted at military targets.

If the target factory had been what the Clinton administration claims, it would have taken out half the population of Khartoum. Today, many

agonize over Truman's decision to "nuke" Japan... a country we were at war with at. The effects to the population would have been the same, only I believe Truman was justified because he was in an active, declared war against a state.

Clinton may claim he is justified because of a vaguely defined "war on terrorism" — that was undeclared before this dramatic action. In Vietnam, a Lt Calley learned that one does not shoot unarmed civilians regardless of the order. This is no less an action, except on a much grander scale.

Why Exotic Researchers Should Be Concerned

We do not live in vacuum. Any action our government takes, it takes in our names... and under the assumption of our blessings. What one allows to be done in his name reflects on the character of that person. I believe members of Exotic Research are people of exceptionally good character and deserve to know the entire truth.

I publish this article at great personal risk. However, I feel it is important for one to be completely aware of events occurring that have the potential to alter our everyday lives. Although the primary focus of this magazine is (and will continue to be so in the future) 21st science and technology, we will be covering major events that from time to time are deliberately ignored by the major media.

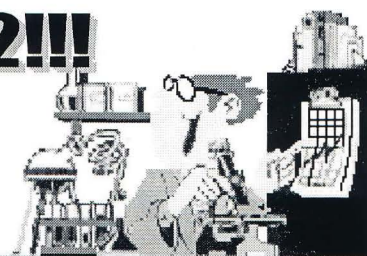

In unleashing a "war on terrorism" alleging financial connections to an alleged individual terrorist, our government endangered a foreign city hosting a company that produced low cost pharmaceuticals. Anyone can be called a terrorist. What's next... a cruise missile assault on a factory in Los Angeles that produces "free energy" devices... Nothing is impossible anymore! **SRE**

Christmas Special ... 3 for 2!!!

1998 Exotic Research Conference Tapes

Order 3 tapes... pay for two!.. and Members... Don't forget your 10% discount (nonmembers: join today and get discount)! Workshops count as 2!

Offer expires December 31, 1998

GEET HELPING THE CHANGING TIMES

Paul, Molley, and everyone working with GEET, are working at a frantic pace to help mankind start the long and arduous task of cleaning up our planet. As we approach the 21st Century, we can look back at some pretty amazing developments in the areas of science and technology. In fact, many facets of everyday life, that we take for granted, were once considered either science fiction or absolutely incomprehensible, just fifty years ago. In the past twenty five years, the pace of research has virtually exploded due to the advent of the computer...WHO KNOWS WHAT THE FUTURE WILL BRING???

Paul and Molley are working with many other inventors, that feel as they do. There are many viable inventions that can and will help our ailing planet. GEET is trying to implement these inventions and ideas to help all of mankind have a cleaner, healthier world. We are on the verge of seeing many breakthroughs in energy technology that will change the physics paradigms that guide engineers today. The beauty of these inventions is they not only reduce pollution and help the environment, they save you money!

Paul and Molley believe that it is also the dream of every caring person on the planet. People helping people, working together as one, to help clean up our polluted planet. The possibilities of a world at peace, free of the choking fumes, of technological development that taint our air, water and soil. Working together as friends towards a common goal will help us all today and save the world for all our children and their children's, children tomorrow, it is their birth right to a habitable planet. We can work together unencumbered by race, religion, color, gender, culture or manmade boundaries. Who said, that Catholic's and Protestant's can not work together?? Paul and Molley's goal, is to make air breathable, water

drinkable, and soil productive. Could you imagine all the people of the world standing side by side working with one common goal in mind, to make a habitat for humanity and an inheritance for all our children, as well as all life that exists on our planet today.

Our technological development, of the last one hundred years, has brought us to the verge of self annihilation. But necessity is the mother of invention, the world needs the technology that will wash the taint of our ignorance from the planet. We are here to help start this process with the GEET Fuel Processor and many other inventions, some that replenish the lacking minerals in soil, so crop production triples, creating energy cleaner and less expensive, and still others that can clean up our land fills, and create very inexpensive, fireproof building materials. There are many other inventions that can reverse the things that we have done to our planet; like toxic waste sites, lakes of crude oil that was too impure to refine, and all of the other unknown atrocities and devastation that have been perpetrated on our once healthy planet, by greedy corporations and governments, that did not care. We must start to show compassion for this world we live in, now, before it is too late. Paul and Molley have done just that, they have dedicated the rest of their lives to help mankind and our planet, and do it seven days a week. If just half of you, were as dedicated as they are, it would not take long to start making a visible difference. Please join them in their efforts to help our ailing planet. Please stand together, united as a family, and start helping yourself and others to have a healthier happier life.

To participate in GEET Research call Paul and Molley at 801-637-2654 (or fax 801-637-3198).
For licensing information phone J. D. Stueben, CEO, or Dick Robbins of GEET Management at 801-281-4577 (or fax 801-281-4578).

CONFERENCE PREREGISTRATION FORM

1999 Exotic Research Conference

Doubletree Suites • Seattle, Washington • March 25-28, 1999

21st Century Technology... in the 20th Century, there were unparalleled advances in science, technology and medicine. However, this is only a jumping off point for tremendous advances to come in the 21st Century! At *Exotic Research* we foresee a dramatic reduction in the consumption of natural resources for heating and transportation requirements as a result of advances in the energy and construction fields... as well as a healthier population due to increased awareness of wholistic health techniques. We challenge you to come and see many of these advanced concepts demonstrated at this conference!

We encourage you to send in your preregistration early and take advantage of the discounts offered!

Conference Notes:

- **Videotapes.** Professional quality video tapes will be available during and after the conference. *Private taping is not allowed.* Conference fees **do not include** tapes.
- **Workshops.** There are 3-hour workshops on Thursday (March 25)/ Sunday afternoon (March 28). Workshops are **additional**.
- **Family Discounts.** Spouse rates/student rates available to immediate family accompanied by *members*. Students must be able to prove age.
- **Individual Sessions.** Individual session rates will be available at the door on a *space available* basis only. Individual sessions will total at least \$280.00 if each session was purchased separately.
- **Hotel.** Special room rates are directly available from the Doubletree Suites. Call 800-222-TREE before February 28, 1999.
- **Refund Policy.** Nonemergency refunds are subject to a 10% cancellation processing fee.

Conference PreRegistration Rate Chart

Type Attendee	Rate	# Attend	Cost
Member/Nonmember	\$249.95		
Spouse	\$199.95		
Student (under 21)	\$169.95		
Conference Workshop Rates			
Brian Andersen Workshop	\$39.95		
Bruce Perreault Workshop	\$39.95		
Paul Pantone Workshop	\$39.95		

List spouse/student/additional attendees:

Preliminary Speaker List

Exotic Research reserves the right to make changes to this tentative list without notice.

Brian Andersen

Quantum Disk and the Spherical Chemical Table

George Wiseman

*Brown's Gas...
Make Your Own!!!*

Ron Waling, NMD

*Heart Guard...
Therapy for the Heart*

Dr. James Bare

Rife-Bare Electrotherapy

Rick Todish

Working Model of an Ionic Propulsion Antigravity Craft

Tom Valone

*Antigravity Research...
Today's Reality*

Paul Pantone

GEET... Practical Application of Plasma Technology

Bruce Perrault

New Generation of Radiant Energy Receivers

Steve Ammerman

*TTL...Better than Viagra
Great for Arthritic Pain*

Ralph Suddath

*Viktor Schauburger's
Living Water Research*

Mark Bean

*The All-American
Electric Light Show*

more to come... there will be at least 18 speakers in all... with emphasis on demos!!!

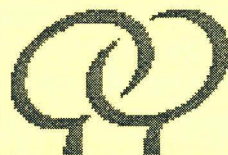

Exotic Research Conference

Seattle, Washington

March 25-28, 1999

Conference Facilities...

Doubletree Suites

16500 Southcenter Parkway • Seattle, WA 98188

(206) 575-8220 • (206) 575-4743 Fax

For reservations with conference rates, call 1-800-222-TREE and specify the EXOTIC RESEARCH Conference...Deadline: February 28, 1998.

Amenities include:

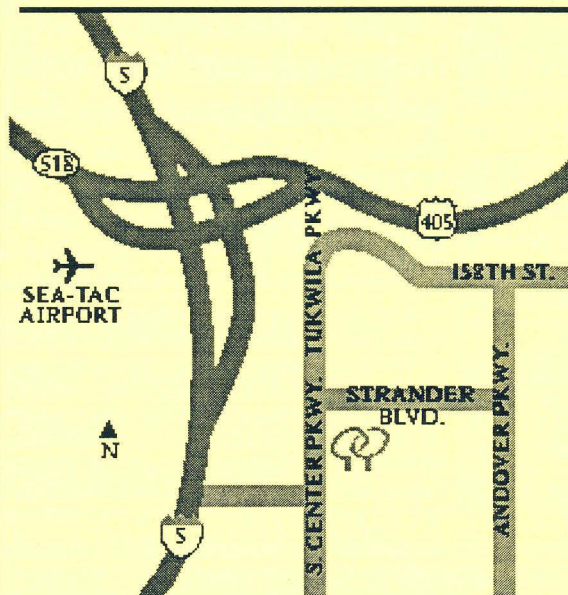

- Heated Indoor Pool, Jacuzzi & Spa
- Well equipped fitness area
- Peter B's Restaurant & Club Infinity Sports Lounge
- Complimentary Airport shuttle to and from SeaTac International Airport.
- Complimentary Parking

Room Occupancy Rates:

Single/Double: \$109⁰⁰ • Triple/Quad: \$119⁰⁰

This beautiful hotel has 221 spacious two-room suites, each with the following features:

- Separate bedroom and Living Room with Wet Bar...
- Coffeemaker, Refrigerator, Iron, Ironing Board, Hair Dryer...
- Two (2) Telephones with Voice Mail and Modem Capabilities...
- Two (2) Televisions Offering On Command Movies...

Location:

The *Doubletree Suites Hotel-Seattle* is conveniently located across the street from Southcenter Shopping Mall which features more than 150 fine department stores, specialty shops, restaurants and a movie theater.

It is just minutes away from Seattle-Tacoma International Airport, as well as 15 minutes from beautiful downtown Seattle with its historic attractions.
